the blue light that means milk at your doorstep

It's six in the morning—milking time. A blizzard has raged most of the night, blotting out roads, ditches, even fence lines.

As the farmer trudges toward the barn, he knows he is cut off from the outside world. What, then, will become of the milk that would otherwise go to waiting customers in the city? Experience has taught him to watch and listen for the answer that he knows will come.

Suddenly it's there—the familiar blue light bobbing over the unbroken landscape, and the hum of a diesel engine in the distance. Soon a big, orange motor grader-snowplow roars past and once again the road is "open for business."

All-weather roads are essential to the dairy industry and its mission of providing health-giving foods for our tables every day. It's such a simple thing to pick up freshly delivered milk from the doorstep on a snowy morning that sometimes we may forget to give credit to the men and machines whose work makes this convenience possible.

Allis-Chalmers motor graders play a big part in keeping farm-to-market roads open in winter, as well as building and maintaining them in summer. But special credit should go to the operators of these versatile machines—men who stand ready to go out at all hours in the worst weather to insure uninterrupted travel the year 'round.

Do you get the chesterfield?

WHEN GUESTS STAY OVERNIGHT, are you the one who must give up his bed and move onto the chesterfield? Then you've probably thought, as you tossed and turned, that you *must* fix up a guest room . . . as soon as you've saved the money.

We all have different reasons for saving. The big thing is to decide what you want *most*, then save for it, either through a regular Royal Bank savings account or a "special purpose" account — whichever suits you best.

It takes just a few minutes to open either kind at any Royal Bank branch. You'll always be glad you did.

Soft Words Don't Mean The Cold War's Over

IT'S AMUSING to notice how roles have changed on the world stage since the Geneva meeting last spring.

Only seven or eight months ago Canada's Minister of External Affairs, L. B. Pearson, was being represented to the American public as a dangerous leftist with a tendency to pacifism. In the eyes of the late Colonel McCormick of Chicago and the almost equally late Senator McCarthy of Wisconsin, Pearson's subversive talk in favor of the United Nations and such branded him as little better than a fellow traveler.

Now, on the eve of the second Big Four meeting of 1955, Pearson has an article in the American quarterly, *Foreign Affairs*, full of advice to great powers in general and the United States in particular. Its title is "NATO After Geneva"; its theme, that for the protection of the free world against Communist aggression we still need a strong North Atlantic Alliance as much as we ever needed one.

Pearson makes the point that nothing in the international situation has changed except the atmosphere—"the dampness has disappeared but the cold is still there, even if we don't feel it as much." The Soviet Union's tremendous military potential is still intact. The Communist Party is still functioning all over the world as a combination of fifth column and spy network. Not one of the issues that divide the world has been solved, nor has a single move been made toward a solution. Yet because these basic disagreements are now debated in reasonably courteous terms instead of an exchange of vulgar invective, there's a growing temptation among NATO countries to relax, save the money and effort they've been putting into rearmament, and generally succumb to the illusion that a new era of peace and good will has already dawned.

It's not enough merely to resist this temptation, either, though it must be resisted. NATO must remain strong in more ways than one, morally as well as physically. And that means it must become more than a mere defensive military coalition which decays whenever the danger lessens. "NATO cannot live on fear alone," as it has been doing until now. It must become an instrument of co-operation not only in military but also in economic and social fields.

None of this is new, of course. Most of it was said and all of it was implied when another Canadian Minister of External Affairs, now Prime Minister St. Laurent, first suggested the North Atlantic Alliance in a speech to the United Nations Assembly. It was spelled out explicitly when Canadian delegates insisted that Article II, the pledge of economic co-operation, be included in the North Atlantic Treaty. Only the emphasis has changed—but that has changed diametrically.

Then, Canada's talk about peaceful collaboration, Canada's insistence that NATO must be something better than an armed camp, had a faintly fellow-traveling sound to our more belligerent allies. Any deviation from an attitude of implacable ferocity, any attempt to look beyond the immediate task of rearmament, was enough to rouse suspicion of "appeasement."

Now the effect of the same line of argument is precisely the opposite. Now Canada is reminding her more optimistic allies that a struggle for domination of the world began about 1946, between the Communist bloc on one side and a loose but strong association of free countries on the other. Whether the fight be armed and bloody or whether—as we now may hope—it will be a bloodless political contest, the struggle goes on just the same.

DOW OF CANADA

CHEMICALS BASIC TO CANADIAN LIVING

They look alike, they use the same shampoo . . . yet **JANE'S HAIR IS SOFTER, CLEANER BY FAR THAN JUNE'S**

SOFT WATER MAKES THE DIFFERENCE!

This diagram shows how ordinary water passes through the water softener. Minerals which cause hard water are removed — you need no special powders or chemicals. When you buy, look for the DOWEX label. You'll find it only on top quality products. DOWEX is distributed in Canada by Alchem Limited.

Wherever you live, the water you are using now is probably hard because 85% of Canadian water supply contains minerals which dull your hair, streak dishes and discolour laundry. Recognize these symptoms? Well, you'll be amazed — and happily surprised — the very first time you use truly soft water. A modern water-softening appliance gives you wonderfully rain-soft water from every faucet in your house.

You can rent a water softener complete with service from your local soft-water service company, or purchase one by calling your plumber, appliance dealer, hardware store or department store. And be sure the water softener you get contains DOWEX, the high-capacity water-softening resin developed by Dow especially for home water softeners. You'll agree that soft water makes a wonderful difference!

Where Dreamers Pay No Income Tax

IT IS PROBABLE that some of you have never visited the Principality of Liechtenstein. It is even possible that some of you have never heard of Liechtenstein. All of which is very sad because everyone of us, at some stage of his life, has dreamed of such a place.

We are here—my wife, my daughter and a pretty American girl friend and your peregrinating London correspondent—on a motoring tour of Europe. We have done France, Germany and Switzerland, so that only Austria remains in our schedule. Then it will be back to London with its monstrous mass of humanity, its waddling omnibuses and its sad little dogs being taken on the lead for a walk.

It was that tall rugged American writer Paul Gallico who invited us to visit this quaint Ruritanian principality. We renewed acquaintance with him at a London first night and when we told him that, like Mr. Pickwick and his friends, we were going to take to the open road in Europe he insisted that we should visit him in Liechtenstein where he now lives.

A strange fellow, Gallico. He was a successful sports writer in the U. S. but at heart he was a sentimentalist and a poet. Instead of watching the heavyweight boxers punch each other into insensibility he wanted to write about the sad little cow that was determined to win the contest for the best milk.

Like many men of sensibility he regards food, and the cooking thereof, as something almost sacred. He bought a house in the English countryside where he cooked and wrote, but his vagabond poetic instinct was not satisfied. The English are not dedicated cooks. In fact, has it not been said that they regard the preparation of a joint as a burnt sacrifice?

"When you come to Liechtenstein," he said, "I shall cook you a dinner that you will not forget." Thus it was arranged, and he assured us that he would book hotel accommodation where we could sleep.

We set off by car from the Rhineland and traveled through the quaint elegance of Switzerland where even the mountains look prosperous and the unmarked cities and towns seem loftily aloof from reality.

Let loose the gods of war but Switzerland is never involved. Her army is always ready and the mountains guard the passes against the invader. In war Switzerland offers sanctuary to escaping prisoners but maintains her neutrality. Spies from both sides jostle each other but normal life ticks on like a Swiss watch. Again and again the generals of the Kaiser and Hitler must have flirted with the idea of invading Switzerland and attacking the allied armies on their flank but they never dared to take the gamble.

Continued on page 38

From this medieval mountain castle, completely modernized inside, Prince Franz Joseph II rules his tiny state. His art collection is world-famous.

Live the modern, electrical way with G-E APPLIANCES

G-E AUTOMATIC TOASTER

... toasts to your taste every time

Nicest way to start the day . . . with toast to your taste every time. And there's never a chance of burnt fingers because the G-E Toaster "pops up" high! Sparkling chrome finish . . . with handy removable crumb tray . . . always-cool plastic handles and plastic base that protects table tops.

TASTE CONTROL—Easily operated colour control regulates toasting time. Gives toast browned to any desired degree from light to dark.

G-E KETTLE boils water in a jiffy!

The perfect gift for weddings and anniversaries. This G-E Kettle can be used just about everywhere—at home, cottage or office. Boils a pint of water in only 2½ minutes . . . holds four pints in all. Comes in easy-to-clean gleaming chrome finish, complete with six foot detachable cord.

TOTALLY IMMERSIBLE ELEMENT—G-E Calrod element is hermetically sealed in a copper sheath fully immersed in water. All the heat goes into the water.

G-E FEATHERWEIGHT IRON fully automatic . . . irons faster

CUTS IRONING TIME—The extra-large sole-plate, with its controlled heat, covers a greater area with each ironing stroke . . . saves time and work.

The G-E Featherweight Iron actually cuts ironing time by one-third. Weighs only three pounds . . . has specially designed air-cooled handle that provides perfect balance. The Fabric-Dial Heat control is located at the front . . . gives and maintains the correct temperature for every type of fabric.

BACKSTAGE

At Ottawa

Cartoon by Grassick
Bell the U. S. cat, Canada is urged, and be independent in the East.

Will We Play "Me Too" In China?

SINCE Canada has the honorable schore of auditing the books of United Nations agencies in various parts of the world, officials of our Auditor-General's Office do a lot of traveling. One of them recently came back from Korea with a revealing anecdote about the anti-American riots there a few months ago.

He met a Korean who cheerfully admitted having turned out to riot against the United States and the United Nations truce commission.

"Are these demonstrations spontaneous or are they organized?" the Canadian asked.

"Oh, they are all organized," said the Korean.

"And are you paid for taking part in them?"

"No, we are not paid when we do," said the Korean, "but we are fined if we don't."

WHAT WITH the misbehavior of "allies" in the Far East and the new good behavior of the Chinese, recognition of Communist China is again under lively discussion among Western foreign offices.

European allies would like Canada to bell the American cat by making the first move to break away from U. S. policy and accept the facts of life in the Pacific. Signs are growing that Canada will do so before many months have gone by.

L. B. Pearson, Minister of External Affairs, released a trial balloon with a cautious reference to recognition of Red China in a speech at Victoria last summer. The reference was carefully drafted—Pearson discussed it beforehand with Prime Minister St. Laurent, who agreed it would be useful to sound out Canadian public opinion on a matter

which had dropped out of sight lately. The sounding was very effective. A lot of editorial comment followed the Victoria speech, almost all of it favorable.

Washington reaction was polite but cool. One American diplomat, commenting privately on the Pearson speech, said Canada would be acting "irresponsibly" if she recognized Red China in advance of a general Far Eastern settlement. He didn't argue that recognition should not come eventually, perhaps fairly soon, but only that it was an important bargaining point which shouldn't be given away free.

Nevertheless, Ottawa is convinced that Washington itself is moving toward a reversal of policy in China, and this is an important reason why Ottawa wants to act first. It's well known that Canada, like the European allies, has never been as strongly opposed to recognizing Red China as has the United States. Only the outbreak of the Korean War prevented, at the last minute, this change of Canadian policy in 1950. Canadians are now afraid that Washington may decide to change its own policy, tell Canada and the other allies about the change after it has been made, and leave the Western alliance looking like a silly band of yes men saying, "Me too."

"While we are still bathing in the waters of Lethe, the Americans will steal our clothes," one External Affairs man predicted.

The thought of Russian mirth at such a development makes Canadian diplomats squirm. There's no indication of an immediate change—Canadian delegates to United Nations are voting as usual for the annual

Communism and Human Suffering

Nowhere are we closer to militant Communism than when men suffer unemployment, job frustration, or race embarrassment. Communism's first hope is to inflame such suffering into fires of agitation, anarchy, and revolution.

Nor is there an easier target than a free society — for there will always be raw edges in the ebb and flow of an unregimented world.

What is the answer? Two-fold. Let us point to our history . . . the wonderful record of prosperity, opportunity, and human tolerance; and to our fathers who braving untold dangers, knew that it is better to be free with perils than to be "secure" in slavery.

**Every year
Canada's parliament grinds out
about four hundred divorces.
The method is antiquated, costly and unjust.
But our major parties think
it's politically dangerous to tamper with it.
Here's a report on**

Ottawa's creaky divorce machine

BY BLAIR FRASER

CANADA'S system of granting divorces contains a political fossil, a relic of the Middle Ages that survives nowhere else. It's almost a century since Britain abandoned a practice still followed here—dissolution of marriage by private act of parliament. By common consent it was a bad practice—costly, capricious and unjust. But for the benefit of Quebec and Newfoundland which have no divorce courts, the Parliament of Canada still grinds out some four hundred divorces a year with machinery like that Britain dismantled in 1857. Turning the crank of that machinery are the twenty men and two women who compose the Divorce Committee of the Canadian Senate.

Next winter, as for some years past, the Senate Divorce Committee will be under fire in the House of Commons as opposition MPs, mostly CCF members, try again to rid parliament of this unpalatable chore. Most acts of parliament originate in the Commons and then go to the Senate, but divorce bills go the opposite way. Evidence is heard by the Senate Divorce Committee; on the committee's recommendation the Senate then passes divorce bills and sends them to the Commons in large batches. Normally the House of Commons passes these *en bloc*, taking the Senate committee's word that the evidence justified the bills. But as a result of the recent campaigns for divorce reform, MPs lately have been taking their own look at some divorces and asking embarrassing questions. Last session they threw out five divorce bills, exactly half of all the contested cases which had got through the Senate. Some MPs threaten to block all divorces, until the government promises to reform the system.

CONTINUED ON NEXT PAGE

SENATOR ARTHUR ROEBUCK
Chairman of the Senate Divorce Committee

**"The Senate has continued
year after year
to deal with divorce applications
as an unwelcome duty
and not as a pleasure,
and I speak for every member
of my committee
when I say that
all of us without exception
would be glad to be free
of the task."**

MP, Lib., Que.

**"Never
will Quebec
accept the principle
of divorce."**

py. But where is the compromise?

ERHART REGIER
MP, CCF, B.C.

**"I cannot support
these measures
because I have
lost all faith in
the type of evidence
which is being given
to committees
of this House
or of the other place."**

Reformers want Quebec and Newfoundland divorces handled not by parliament but by the Exchequer Court or some other federal tribunal. Their reasons fill hundreds of pages of Hansard, but they boil down to three main charges:

1. That parliament is wasting its time passing acts for the relief of individuals. Nobody denies this; the method is tolerated only because no alternative can be agreed upon.

2. That parliamentary divorces are so costly as to be unfair to the poor. This also is undeniable. In eight provinces a court divorce can be got for as little as \$350. Parliamentary divorces cost \$1,000 to \$1,500 even for people who live near Ottawa. Newfoundlanders have the added expense of bringing their witnesses all the way to Parliament Hill, and even on tourist flights the return fare from St. John's to Ottawa is \$163.95.

3. That the Senate Divorce Committee on which both the Senate and the House rely to investigate each case is incompetent, and its findings unreliable. This is the charge that sets the fur flying in parliament.

Senators rarely die of overwork, but by Senate standards the divorce committee is a model of industry. Last session it sat fifty-two days on four hundred and fourteen petitions, hearing at least two witnesses apiece in uncontested cases and many more in the seventeen which were opposed. Its members are impressively qualified—eight are lawyers who might well have been made judges instead of senators. All resent being booed rather than thanked for doing a hard unwelcome task.

Yet for all its effort the committee provides ammunition, year after year, for the Commons' campaign against the divorce system. Sometimes by its own fault, sometimes by circumstance, it is made to appear gullible or stony-hearted or both.

Last session, two frequent witnesses before the committee were a pair of private detectives who were sentenced, less than a year ago, to fifteen months in jail for trying to fabricate evidence for a court of justice. They set a trap for a husband whose wife wanted a divorce. They rented a hotel room, hired a woman to occupy it, had her telephone the husband to say she was a friend of his sister, and wouldn't he drop over for a drink. The husband, a wary character, telephoned his sister in Montreal and confirmed his suspicion that she had no such friend. He took the police with him to the rendezvous and the private detectives were caught in their own snare. They were later acquitted on appeal, on the technical ground that the Senate committee for which the evidence was fabricated is not "a court of justice." But the appeal court judge who freed them called their conduct "contemptible."

In three of the ten contested cases passed by the Senate and sent on to the House last session, these discredited characters were important witnesses for the petitioner. The Commons passed one of these bills after a rigorous re-hearing, having satisfied itself on other evidence that the petitioner deserved his divorce. The two others failed to pass. No voice was raised in any party to challenge the CCF contention that two men found guilty of such an offence had forfeited all claim to credibility, and that their testimony was worthless.

Liberal MPs might be quicker to defend the judgment of their brethren in the upper house but for one divorce bill which passed the Senate, though not the Commons, about eighteen months ago. It was widely publicized at the time in various publications, including this one. Briefly the circumstances were these:

A rich Montrealer wanted a divorce which would relieve him of the forty-dollar weekly allowance he was paying, by order of a Quebec court, to his estranged wife. Twice he hired detective agencies to get evidence against her; both failed. Then he hired two men whom he met, he said, when one came in to sell him insurance. For one thousand dollars plus expenses they soon produced a marvelously detailed account of what they claimed was the wife's adultery, and a man willing to swear he had committed it with her. The "corespondent" turned out to be the roommate of one of the "detectives," but he denied under oath that he'd got any money for testifying.

The wife, a polio victim who still walks with a limp, said she had indeed accepted the man's invitation to drive her home. He had then attempted to rape her, she said, meanwhile tootling his horn to summon the two "detectives" to witness the deed. She had a doctor to testify that on the date in question he had treated her for bruises, scratches and shock. However, the Senate committee rejected the wife's evidence and believed the "detectives." It recommended the divorce, which was thereupon passed by the Senate and sent to the Commons with a batch of others.

There it was challenged by Erhart Continued on page 61

The man who married his typewriter

LIONEL SHAPIRO be

ON THE ground that nobody knows me as intimately as I do, a scarcely debatable premise, I venture the opinion that only a virulent snobbishness has saved me from the fate that overtakes a preponderant majority of Canadian-born-and-bred novelists. Not social snobbishness. (How could I be guilty of that, with ancestors who fled over the face of the earth until they found what they were looking for in Canada?) I am snobbish in a very special, un-Canadian way.

A long time ago I decided that a writer born, bred and educated in Canada is not necessarily less skilful, less perceptive or less readable than a writer born in the United States, Britain, France, India or China. I decided that a Canadian has not only an equal chance but also an equal right to jump out into the world forum and make a reputation and a livelihood as a writer.

This required a simply terrible snobbishness on my part. More than snobbishness. Pure gall. For although Canadian bankers, soldiers, doctors, actors, engineers and explorers could be, and are, acknowledged world leaders in their fields, I was brought up to believe a Canadian has no writing tradition to build upon, that he is a mouse in the world of creative writing—not only a mouse but a mouse in diapers—that there is no distinctive Canadian literature in the

ONE OF THE MOST VERSATILE AND widely recognized writers Canada has produced, Montreal's Lionel Shapiro took up the craft on second thought. He graduated with honors from McGill in 1929, intent on becoming a psychologist. A summer job as a sports writer on the Montreal Gazette changed his mind. In the twenty-six years since, Shapiro has been a drama critic, a Broadway columnist, a White House correspondent, a war correspondent, a foreign correspondent; he's written a successful stage play which was produced by the Old Vic in Bristol, five television plays produced in

New York and London, a batch of short stories, song lyrics, movie scripts and four books, three of them novels with a total circulation of more than two million copies.

The Sixth of June, his latest novel, is a Book-of-the-Month selection and has been sold to Hollywood for a sum in six figures. Its reception by the critics, while mixed in part, has been heavily favorable. "Not since Hemingway's *A Farewell To Arms* has there been a war-love story as good," declared the Baltimore Sun. "This might well become a minor classic of our times." The Chicago Tribune observed, "It has style, pace, story

and glamour . . . Inevitably it will invite comparison with the novels of John P. Marquand and it carries off the comparison with élan." "It is magnificent journalism-in-depth," said the stately New York Times. Even Boston was enthusiastic: remarked the Christian Science Monitor, "Mr. Shapiro's report on England at war must be rated as superb."

Today Shapiro lives a commuter's life. His home is in Montreal, he works in New York, spends some time in Hollywood and each year tours Europe. At forty-six he's still a bachelor: "I can't stand noise," he explains.

became a best-selling author by refusing to accept the smothering home-grown legend that Canadian writers must potter in the grass roots and leave the world — and success — to others. How long, he asks, must we sacrifice our creative talents to

the myth that's muffling Canada's voice

English language, that someday, somehow, a great Canadian novel will be written and this will be the signal for Canadian literature to begin its growth. Until then, the legend went, the lad born in Niagara Falls, N.Y., has a chance of becoming a Hemingway but the lad born in Niagara Falls, Ont., had better walk in the dark of the moon until a Canadian Shakespeare materializes and hastens the dawn.

Thanks to my incurable snobbishness, I ignored these fables, foibles and unreasoning fears. I elbowed them out of the way. And, to my astonishment, it has worked.

Since 1947 I have written three novels. They have been published (and translated where applicable) in Canada, United States, Britain, France, Belgium, Spain, Italy, Switzerland, Holland, Denmark, Norway, Sweden, Germany, Mexico and the Argentine. The total circulation of these books in all editions is as yet incomplete but it certainly runs well in excess of two million copies. All five television plays I have written have been produced by NBC in New York and two of them by BBC in London. The one stage play I attempted was produced by the Old Vic Company in Bristol and was received with profound respect and even enthusiasm by critics from such newspapers as the Manchester Guardian and the august Times

of London. The latest novel, *The Sixth of June*, recently published, is a selection of the Book-of-the-Month Club, was bought by Twentieth Century-Fox, and is being translated for world-wide distribution.

The purpose of this listing is not to recount a success story; it is, rather, to sketch the outlines of a tragedy in the development of Canadian creative writing and to trace a formula of native Canadian provincialism which has deterred and deflected Canadians in all creative fields from the free pursuit of their ambitions. The best examples come to my mind in the field of writing. Having traveled extensively most of my adult life, my acquaintance with Canadian writers is much restricted; yet I can name a dozen Canadians who can outwrite me left, right and centre, whose intelligence is broader and deeper and quicker, who would be coddled and acclaimed in any other country of the world, and who have gained scant recognition, no popularity and piddling circulation in Canada or, for that matter, anywhere else. They are people who have been discouraged by the legends and the foibles and by the very formidable road blocks erected by Canadians themselves against the free passage and development of Canadian artistic creation.

If this article, which is bitter in the writing and probably in the reading,

encourages one or two Canadians to ignore the local handicaps, it will have been handsomely worth while. A Canadian literary tradition must necessarily be born inside Canada, but I venture to predict it will become a tradition in the outside world first and belatedly in Canada.

The handicaps that beset a Canadian intent on a writing career are formidable. They embrace both shadow and substance, and the shadow is probably a more powerful deterrent than the substance.

Prof. F. M. Salter of the University of Alberta, speaking last May in Toronto to the Humanities Association of Canada, deplored Canadian literature as "academic and rootless." He went on to urge all interested in literature to dig out the traditions of folk poetry and folklore "on which any healthy literature must depend." He said, "The best in the arts springs direct from the people. If we are ever to create a distinctive Canadian literature we must anchor ourselves to the Canadian way of life."

At the risk of being unfair to Salter (the above is merely an excerpt from a newspaper report of his speech), I must confess that his thesis infuriates me, if only because this is a prime example of the psychological handicap writers of my generation have been weaned on. Well-meaning sincere people like Salter

ROBERT THOMAS ALLEN SAYS I don't WANT t

IT SEEMS to me that it's time textbooks on entertaining, etiquette and social activity in general started dealing with something that's just as vital as knowing how to seat people, address them, serve them, group them and talk to them. That's knowing how to leave them alone.

Too many people operate on the theory that, if guests, friends, members and congregations are to have a good time, somebody has to make a strenuous effort to arrange it. This isn't a criticism of believers in organized fun, good-fellowship and enjoyment; I think they're generally better social human beings than I am. What I'm criticizing is the belief itself—a naive and mistaken conviction that all kinds of people, including me, can be rescued from dullness and made temporarily happy by careful programming.

I keep running into this sort of thing at picnics, dinners, evenings out, summer resorts, banquets and a lot of other places where people are not allowed to enjoy themselves in their own way and with whom they choose. Somebody is always stiffening programs with three-legged races, sing-songs and middle-aged-men's ball games; rousing people from deck chairs to go on bird-watching

expeditions or trail rides; getting guests on their feet at banquets and making them march around the table and sit down beside some stranger labeled "Harry"; bringing variety into their friends' lives by getting them all playing some game they don't understand; and sitting back beaming at the sight of everyone having such a good time.

A few nights ago at a party I was having a wonderful conversation in a corner with a little rumpled mathematics teacher who claimed that children shouldn't be made to go to school, that mankind had no real existence, and that getting drunk was not an acquired habit but a basic instinct like love. Just as I was warming up with some ideas of my own, the hostess, a stout boisterous woman, walked up to me, said, "Here!" stuck an orange under my chin and burst out laughing.

"You'll find out what it's for," she shrieked, tapping me playfully on the head with a score card. "It's an icebreaker."

She yanked me to a line of guests in another room and stood me in front of a thin embarrassed-looking girl about a foot taller than I am. The hostess explained to her that she had to get the orange out from under my chin with her chin and stick it under

somebody else's chin without using her hands.

I stood there holding the orange against my chest, smiling up at the girl encouragingly, like someone being cheerful about a broken neck. She looked at me as if she wished that instead of being such a good sport I would just go home. It didn't help when, after a horrible tussle for the orange, she got my glasses caught in her hair and walked off with them dangling down her back like a broken brooch. Everybody laughed hysterically.

In other words this woman broke up a good conversation and very nearly smashed my glasses just seeing that everybody had a good time. And she

wasn't through yet. She was already handing out stubs of pencils and pieces of colored paper for the next game.

"I'll tell you what to do with them in a minute," she told me. She glanced into my face, looking pleased, and said, "I like to get people out of the corner and make them forget themselves."

This is a principle behind a lot of organized good-fellowship and it's about as scientific as some of the early cures for warts. Organized fun doesn't always help people forget themselves. It often does just the opposite. Party games, for instance, sometimes get people's minds on themselves so that they can't think of anything else for days. Any time I sit up in bed in the middle of the night thinking of myself and something I said or did at a party, it wasn't something I said while sitting in a corner; it was something I said in a game, standing in the middle of the room and coming apart with nerves. Like the time I got into a game of charades and had to do a book title called *The Web of Passion*. There are still people on my street who were at that party who just barely speak to me to this day.

And I'm not the only one. I have a neighbor, a military old gentleman as erect as a polo mallet,

with such a distinguished appearance that people always take him for something like a retired university president or a nuclear physicist. Actually, he sells shirts and anything deeper than *The Return of Lassie* gives him a headache, but he enjoys a certain prestige because he seldom talks and it does nobody any harm. But his reputation was almost ruined when a big, tightly girdled woman with frizzy yellow hair held a party for a few of the neighbors, included him among the guests, and decided early in the party to make everyone just forget themselves with a few brisk games.

In point of fact, this man could forget himself for longer periods than anyone I've ever known. He had a way of standing for hours, eyes narrowed, hands clamped behind his back, staring at a tree or a rock formation. Anyone who didn't know him would think he was going back millions of years and piecing together the earth's origin. Then he'd take his bulldog pipe out of his mouth and say something like, "Found a perfectly good deck chair this morning. Not a thing wrong with it. Somebody just chucked it out with the garbage."

That evening, sitting out on his lawn watching the sunset, the evening breeze ruffling his thinning

hair, he'd take his pipe out of his mouth, look at you sharply and say, "Little hole in the seat the size of my finger." He'd hold up his finger. "Nothing else wrong with it." It would be a moment before you'd realize that he'd been thinking about the deck chair ever since you saw him in the morning.

He was a happy outgoing personality if I ever saw one, until he went to this party where the hostess made everyone take off their shoes and pile them in a corner, then pushed all her guests into two lines and explained a game called Junior High. It consisted of running for a table and picking out a slip of paper bearing a number and the name of the capital of a country, multiplying the number by another number which was pinned to the lapel of the person behind you, running for another table and picking up a piece of celery in your teeth, dipping it in some kind of juice, whipping around and writing the product of the two numbers on a big sheet of cardboard, then running to a corner of the room and putting on your shoes and going to the end of your line.

In about twenty seconds my neighbor had caused a traffic jam that backed right out onto the veranda. The game had pretty well

Continued on page 40

In his Toronto office Hirshhorn works ten frenzied hours a day, maps deals by the minute. Here he talks with statistician W. P. Snead and secretary Lena Greenwald.

How Joe Hirshhorn Hit the Uranium Jackpot

Even when geologists said there couldn't be uranium at Blind River this brash and bouncy little financial wizard tossed in \$30,000 and struck a spectacular bonanza. He wasn't surprised. "Making money comes easy to me," he says, "—like breathing"

BY DAVID MacDONALD

ALONG Toronto's Bay Street, the frenetic mining capital of North America, veteran prospector and minemaker Gilbert A. LaBine had long been acknowledged—until recently—as the uranium king of Canada. The reason was obvious. It was LaBine who had found the continent's first pitchblende, at Great Bear Lake, in 1930; LaBine whose Eldorado mine helped usher in the atomic age over Hiroshima; and LaBine who, in the northern wilds of Saskatchewan, came up with Gunnar, Canada's first truly big uranium strike.

Today—for reasons equally obvious—the top man in uranium is no longer LaBine, a conservative grey-haired elder of the industry, but Joseph H. Hirshhorn, a flashy fast-talking little mining promoter from the borough of Brooklyn, N.Y., whose exploits on Bay and Wall Streets have won him millions of dollars and a gambler's reputation for playing long shots.

As a promoter, Joe Hirshhorn's forte is finding money—usually someone else's—to turn rare rock into more money for all concerned. Having resigned from P.S. 147 in the ninth grade, he holds no B.Sc. An employee of his who does says, "Joe can't tell coal from compost." Hence, when a geologist named Franc Joubin told him in 1953 that there was uranium beneath the jackpine bush of northern Ontario's Algoma district, Hirshhorn could not argue, as many experts had, that Algoma was geologically all wrong for it. The very idea intrigued him. "Uranium!" he cried. "It's got sex appeal!" On this unique assay, plus the greater knowledge that Joubin was a keen prospector, Hirshhorn wagered thirty thousand dollars—much of it his own—that he was right.

He was already a very wealthy man, and the gamble made him much wealthier. The pay-off Joubin came back with was the richest uranium field on earth—a three-billion-dollar bonanza that may prove still bigger when the Geiger counters stop chattering over it.

The Blind River discovery, so called for a nearby lumbering town, promises by 1957 to put Canada ahead of the Belgian Congo as the world's chief producer of uranium.

Hirshhorn met his second wife, Lily, when buying her paintings. He has a large, costly art collection.

More important, the West is now assured a supply of the magical mineral for as far ahead as man can see.

All this is most gratifying to promoter Hirshhorn, as are the facts that roughly two thirds of the Algoma Basin's known ore reserves belongs to companies he controls and that, thus far, he is personally ahead some thirty million dollars on the gamble. "Making money comes easy to me," he says with candor, "—like breathing."

The owner of this happy faculty is, possibly the

last person Hollywood would cast in the role of J. Pierpont Morgan. Joseph Herman Hirshhorn stands three inches over five feet and has a slight paunch. At fifty-six his black hair is slightly silvered, his eyes are dark and piercing and his face is dominated by a large nose and, generally, an unlit cigar. When he moves, which is almost constantly, he hustles about with short jerky steps. A gay extrovert, he is given to interrupting serious business discussions by breaking into song and/or dance, or by shouting, "I feel felonious!" When he speaks—"What's dat erl well woith?"—it is the voice of Flatbush Avenue.

If Hirshhorn does not look nor always act the part of a financial giant, he assuredly is one. After forty-two years of scrambling in what he calls "the jungle," he has built up an empire of interests that touches four continents. His wealth has been reckoned as high as a hundred million dollars.

Hirshhorn's training in finance dates back fifty years to his second day in America—he was born in Latvia—when, in the basement of his new Brooklyn tenement home, at the age of six, he shot his first game of craps. He won thirty cents, whereupon the other players, boys of a more advanced age, smacked him down and took away his money. Hirshhorn has never forgotten this. "The game," he says today, "was new to me."

That he has since learned money games well was strikingly demonstrated when Joubin came through with Blind River. With the geologist, Hirshhorn pulled off one of the most sensational coups in Canadian mining history, a secret six-week staking bee that wrapped up most of the best ore bodies in the Algoma Basin before Bay Street heard a word of it.

Then, while astounded rivals were rushing in to grab what was left, he quickly organized more than a dozen companies to exploit his claims. Shares in one, Peach Uranium, shot from a dollar to thirty-eight dollars within a matter of weeks, were split five-for-one, and soared again to twenty-eight dollars—a total jump of fourteen thousand percent.

Before a pound of ore was taken from the ground Hirshhorn sold the first five years' output of uranium oxides from his two largest mines, Algom and Pronto, to the nation's only uranium buyer, the federal government, for \$262 million. At a learned guess, the profit from the two will be more than a hundred million.

This spring, as a filip to his Blind River find, Hirshhorn made the deal of his life

Continued on page 52

In a board room packed with modern art Hirshhorn chats with top aides. Franc Joubin (centre) found Blind River. J. A. Vickers is planning a model town there.

She was a good, dull woman,
simple as bread and butter . . . and

The only woman who ever puzzled me

Her name was Eressa Duncan, wife of Brad Duncan, Halcyon Cove, N.S. Her back was toward us when we entered the kitchen that midday, polite pretence that she hadn't seen

her husband approaching with a stranger, though one could see the length and breadth of the Cove from their kitchen window.

"Set another place, Ressie, we've got company." My new friend nudged me into the room as he spoke, and she turned to meet the unexpected guest. I saw a dumpy, middle-aged woman with a sallow, pear-shaped face and mild blue eyes. Her hair, red once, was now the neutral shade of faded brick. Why do redheads never achieve pure white or grey? Over her house dress an apron crackled with starch, a dead giveaway had I known it, for visitors always merited a clean apron.

"This here's Allistair Gregg, Ressie, from Toronto. He wants a place to board for a couple o' weeks."

"Kindly welcome, I'm sure." She offered me a pudgy, veined hand.

"He's a painter," Brad went on. "Not houses or barns—a picture painter. He's going to paint the Cove."

His tone implied no respect for my aim so I hastened to explain that I was only a holiday artist, painting on my vacations from the office. A friend, I said, Harry Munroe, who had spent boyhood summers here, recommended the Cove when he learned I

was coming to Nova Scotia. They remembered Harry. He'd been kin to a former pastor.

"And he sent you to us," marveled Mrs. Duncan. "Imagine! After all these years."

"Well, sort of," I hedged. Harry had named no one in particular at Halcyon Cove. "Knock on any door," he advised. "They'll take you in or they've sadly changed. Most hospitable people in the world, believe me."

I hadn't knocked on any doors; I had spoken to the first man I met, Brad Duncan, and here I was with a dinner invitation.

"Get busy, Ressie, and gab after," her husband told her impatiently. "I'm hungry enough to eat raw squid."

Brad was tall, spare, grizzled, with craggy features and sharp brown eyes. Past sixty, he'd been at sea for forty-odd years, he'd told me. Now him and a young fellow fished offshore. Weren't much in it nowadays, not with them trawlers scratchin' up everything that had fins or scales, dangblast 'em!

Mrs. Duncan threw me a rueful smile. "Dinner's all ready to dish up, but it's only potluck, I'm afraid. I wasn't looking for company." *Continued on page 28*

"Allistair," she said, "I'd like you to leave. Us being here alone . . . Folks'd talk. A widow has to be careful."

A MACLEAN'S FLASHBACK

Rev. Egerton Ryerson (1803-1882)

THE
Gloomy Renegade
WHO
Shaped Our Schools

As a Methodist circuit rider Egerton Ryerson preached goodwill while fighting the Family Compact and the Anglican Church. He became head man of Ontario's schools by being a smart politician. Then he scuttled the whole education system and gave us the one we still use in most of Canada

BY JAMES BANNERMAN

IF SOME military-minded historian could order the makers of Canada out of their graves and fall them in on a parade ground, the men he'd pick for the front rank would undoubtedly be towering figures like Champlain. In the second rank would be slightly less towering figures, like Sir Wilfrid Laurier. Behind these famous and colorful giants would come the lesser makers, whose work was useful but unspectacular. This is the story of one such rear ranker — an industrious, obstinate, confusingly contradictory Methodist minister named Egerton Ryerson.

Ryerson influenced the course of Canadian history in several different and notable ways. He struck a valiant blow for religious freedom by defeating almost singlehanded a powerful group of Anglican arch-Tories, who wanted the Anglican faith established as the state religion of Canada. Yet he'd been brought up to be an Anglican and an arch-Tory himself. As the outstanding leader of Methodism he did a great deal to marshal the forces that eventually made Sunday in Toronto a day world-renowned for gloom, and gave us our present-day restrictive liquor laws. Yet he thoroughly enjoyed wine and beer, and habitually broke the pledge of total abstinence he signed for the sake of appearances.

He was the founder of a religious weekly, which he edited with such liveliness it soon had the biggest circulation of any Canadian paper of any kind. Yet his own writing was so far from lively that the historian Bourinot called his *Loyalists of America*, in two thick volumes, "probably the duller book ever compiled by a Canadian." He was also the founder of what is now the Ryerson Press, still flourishing after a hundred and twenty-six years as the oldest and largest all-Canadian publishing house. Most boys of sixteen nowadays have more formal education than he ever had in his life. Yet he was the first principal of Victoria College, now a part of the University of Toronto. The biggest technical institute in Canada is named for him. And his main achievement was to organize the school system of Ontario, more than a century ago but on lines which even today would be considered progressive.

His second wife was his brother's idea.

The importance of this was not merely provincial, since the Ontario system served as a pattern for the school systems of most of the rest of English-speaking Canada. Its founding is commemorated by a nine-foot bronze statue of Ryerson in the grounds of Toronto's Ryerson Institute—the left hand holding a book, the right apparently throwing breadcrumbs to the pigeons. The face has a look of uncompromising straightforwardness, and would be stern if it weren't for a touch of gentle humor that suggests he was always ready to smile at his own shortcomings. The admirers who subscribed for the statue paid seven thousand dollars to get a bronze Ryerson strikingly different from the flesh-and-blood one.

He not only couldn't smile at his own shortcomings, but was quite incapable of smiling at himself for any reason at all. In the winter of 1856, for example, he was in Rome, on what he called an educational tour, and spent a lot of time looking at paintings and sculpture in the Vatican. One afternoon as he bent over to study a picture he was seized with lumbago and couldn't straighten up. Going down on all fours and uttering sharp yelps of pain, he made for the nearest attendant. The attendant thought he was trying to imitate a dog and ordered him to stop. When Ryerson managed to explain what was wrong, the man called three other attendants. Between them they turned Ryerson upside down, grabbed him by the wrists and ankles, carried him out, and loaded him into a cab to be taken to his hotel—lying flat on his back on the floor with his arms and legs in the air. He was naturally not amused at the time, but never to the end of his days could he understand why the people who saw him had laughed.

Even in an age when most respectable men wore black frock coats and stovepipe hats and tended to behave as though they'd just been at a funeral, Ryerson was outstandingly solemn. Although he seldom allowed himself to unbend, he could exert the fat pink charm of a fatherly confidence man when it seemed indicated. Once on a trip to England he had dinner with Lord Grey, the colonial secretary, *Continued on page 46*

As editor of this Methodist weekly he printed sermons and recipes for beer.

For years he fought the great political power of Anglican Bishop John Strachan.

At Toronto's Ryerson Institute of Technology this kindly looking statue marks his name.

How do deer know exactly when to fall in love? What tells the palolo worm the hour has come for his annual festival? Do fish bite according to their own private clocks? Here's what we know about one of nature's greatest mysteries

AN ANIMALS tell the time and if so what clocks do they use? For instance, do fish bite when they feel the pangs of hunger, or are they opportunists who eat when they can, or do they bite according to hours set by the sun and the moon? Fishermen, millions of them, follow the so-called solunar tables of John Alden Knight. The tables are based on the theory that freshwater fish have two major feeding periods per day and one or two lesser ones, all of which come later daily by about fifty minutes and are therefore in step with the daily progress of the moon around the planet. Other things being equal, fish are supposed to feed mainly at times set by cosmic forces rather than by more down-to-earth requirements. Millions of other fishermen are scornful of such theories.

Only fishermen themselves, however, by opinions based on accurate observations, can decide whether this is a true fact or not. But stranger things are happening all the time as the result of moonrise and sunset and other attributes of our satellite and sun. Each of them keeps time, in its own way. In combination they make a calendar that serves mankind and the rest of the animal kingdom alike.

In the sea, according to the leading frogman Jacques Cousteau, the larger fish feed voraciously for about one half hour shortly after dawn and then again before dusk, living more or less peacefully among their prey during the intervals between. It may of course be simply a matter of the sun's illuminating clock together with a full or empty stomach, the fish being hungry after a long dark night, feeding as soon as vision permits, and retaining that satisfied feeling until waning light and a now-digested meal recall their appetites. Yet

Humans have learned to think for themselves without any help from the sun, but they still get moonstruck.

Muttonbirds from all over the Pacific arrive all at once for their annual tryst on islands near Australia.

The moon and sun call the tune to which we all dance our lives

Do fish eat when they're hungry?
Or do cosmic rays remind them
when it's time to hunt for dinner?

it is a fact that the sun clock governs sea life to a very great extent, for at dusk the myriads of minute creatures upon which small fish feed move toward the surface as the light fades and are most abundant there during the dark hours around midnight. At dawn they sink into deeper water, compelled by the rapidly increasing intensity of light, and with them tend to go the smaller fish that feed upon them, and so on up the scale, the whole being a sort of chain reaction triggered by the rising and setting of the sun.

Whether the fish in our rivers and lakes are influenced by the moon in addition to daylight and darkness and the rapidity with which they digest their meals, is another question. All we can say for certain is that the moon's influence reaches us and all living things in ways more subtle than moonlight itself, or through the oceanic tides produced by the moon's pull of gravity. Whether or not the moon as well as the sun governs the feeding habits of animals as a whole, there is no doubt at all that both of the celestial bodies are concerned with mating cycles on land and in the sea. And the precise control of mating habits is even more vital to the perpetuation of life than precise control of eating habits.

Animals, like human beings, must be born in suitable circumstances to reproduce and grow, and must find a mate if they are to leave progeny behind them to propagate their kind. In all of this, timing is of the utmost importance, for to be or not to be in the right place at the right time, and bodily prepared for whatever contingency may be, makes all the difference between success and failure. A sense of time such as we ourselves

possess is probably unique, but most creatures live according to calendar and clock even though they cannot be aware of the fact. Their lives are governed by the sun and the moon as definitely as yours and mine, for there is little else with which to measure passing time or to make a trysting date.

The Australian muttonbird, one of the shearwaters, spends most of the year spread out over the vastness of the north Pacific from the equator to Bering Strait, but in November of each year they arrive at certain small islands off the Australian coast virtually by the million, all more or less ready to breed. Leaving aside the question of navigation, there is the uncanny fact that they arrive almost all at once, starting from places thousands of miles apart. Some sort of environmental clock must set them going, though at different times, according to the distance they have to travel. This is an extreme case, to be sure, but most birds show something of the sort, a restless urge to shift location as the breeding season approaches.

The time for hatching eggs or bearing young is the crucial one in the lives of birds and mammals, for there must be food enough and warmth enough if the young are to survive. Everything else is therefore timed accordingly so that new life arrives in spring time. No matter how long a mammal carries its young within the womb, spring is usually the time to bear it. So the horse, with its year-long pregnancy, mates in spring so that its young shall be born in spring. Goats mate in the fall and the young are born in spring. Fallow deer mate in early winter and the young are born in the spring. The system is simple—you work

backward from the arrival date of the young.

The timing seems to be an inborn cycle and yet something in the environment will overpower it if need arises, so that the clock, in a manner of speaking, becomes reset. The spring-breeding English song birds of the northern hemisphere, which have been taken to New Zealand and Australia, all breed now in the southern spring, which is a very different part of the calendar year. Spotted deer introduced from India into Europe continued to produce their offspring in midwinter, which was fatal, but after a while adjusted to the proper season. We get the impression of internal rhythms like the mechanism of a clock, but the clock is generally one that can be set by external forces or circumstances. The rhythms within and the rhythms without must be brought into harmony for successful living.

It is not so long since human beings learned to tell time in a conscious way. Primitive savages, insofar as there are any left, count full moons upon their fingertips or in some such manner. Early man as a whole had greater difficulty working out the seasons, the turning of the year and midsummer's day, and the equinox of spring and fall. For there has always been a time for sowing and planting and a time for reaping, and a time for mating which is better than another. In the pagan world the time of the spring planting, of midsummer's eve and of Halloween have been times for ceremonial mating for thousands of years. Birds and mammals, however, manage their affairs without such benefit of counting and measuring, or watching for the sun to rise in a certain place as we did in olden days. The *Continued on next page*

Maclean's Movies

RATED BY CLYDE GILMOUR

TV's Dolores Gray shows there's more than one way to sell a song.

BEST BET

IT'S ALWAYS FAIR WEATHER: The blithe and gifted people who made *On the Town* (1949) have come up with another big-league Hollywood musical, the year's best thus far in that crowded department. Television's advertising hucksters are given a dandy ribbing — vocabulary-wise, philosophy-wise and otherwise — in the story about three ex-GIs (Gene Kelly, Dan Dailey, Michael Kidd) who meet ten years after the war and wanly try to revive their dying friendship. Cyd Charisse and Dolores Gray are delectably on hand.

I AM A CAMERA: Julie Harris, in her own stagey way, gives a sparkling performance as an unconventional English playgirl thumbing her nose at the moral code in early-Hitler Berlin. Very funny in spots, but often too frenzied and contrived.

THE KENTUCKIAN: Evidently intended as a sprawling and full-flavored piece of Americana, this one has emerged instead as a long, slow outdoor yarn starring Burt Lancaster (who also directed it) as a Texas-bound Southerner in 1820.

LOVE IS A MANY-SPLENORED THING: A thoughtful love story about a Eurasian woman doctor (Jennifer Jones) and an American newsman (William Holden) in Hong Kong. But it becomes repetitive and draggy before the finish.

THE NIGHT OF THE HUNTER: Charles Laughton's directorial debut has some impressive moments but is weakened by an overdose of brooding camera symbolism. It's about a backwoods evangelist (Robert Mitchum) and his deadly pursuit of two small children.

THE TROUBLE WITH HARRY: Alfred Hitchcock's latest is a wacky ruthless farce with some highly comical scenes. Squeamish customers should approach with caution: the basic "gag" in the story is a corpse.

sun serves as a calendar whether you know it or not.

All of the light that enters the eye and stimulates the optic nerve of bird and beast and man is not expended entirely as sensation. Some of the stimulated nerve fibres bypass the brain proper and reach the pituitary gland — that small master gland of the body that lies just beneath the brain. Among other qualities, the gland liberates hormones which circulate in the blood and cause the reproductive glands to grow; this is a seasonal matter for most of the animal kingdom. Their owner has the urge to mate and also as a rule to expend energy in other ways such as singing, fighting or traveling.

As the hours of daylight lengthen or shorten as the seasons change, the internal machinery of the body is kept in tune with the march of external affairs by the light of the sun as it reaches through the eyes to the governing gland. The growth and maturity of the reproductive glands, and all the chain of events relating to them, are kept in steady adjustment by the solar calendar itself. Such are the chemical shackles of backboneed creatures as a whole. Only the human species has broken away to a great extent and substitutes the qualities of the mind for qualities of the blood.

If the sun keeps seasonal time for annual breeders, the moon serves for more precise timing within the proper season. The European nightjar, a bird that flies and feeds only at night, lays a pair of eggs during the last quarter of the moon. They hatch the following month when the moon is full and when the parent bird can hunt all night for food for the hungry chicks. During daytime the nightjar lies hidden with eyes closed tight; at nighttime only, when it is active, is it apparently susceptible to the light from the heavens.

A Worm That's Never Late

As the moon waxes and becomes full, the moonlight stimulus travels along the same internal pathway that the daylight stimulus moves in other creatures, through the eyes and the pituitary gland to the ovaries, causing the eggs to grow and be laid at a certain time in the lunar cycle. In its own way the bird is as moonstruck as we are ourselves, although in our case it appears to be either the intangible glamour of a moonlit summer night or the hypnotic attraction of the lunar surface itself. The daily spin of the earth and its yearly journey around the sun set the basic patterns of existence, but in many ways the moon plays a role out of proportion to its size. The sun, so to speak, maintains the living clock but the moon acts as the alarm.

Of all living things, you would think, the back end of a worm could never tell the time. Yet the palolo worm of the Pacific Ocean, which abounds among the island reefs of Samoa, is more regular than we are in fixing some of our annual festivals. Every year, one week after the full moon in November, the rear halves of countless millions of worms back out of their burrows and break off. They swim upward to the surface of the sea to shed eggs and sperm in clouds, while the front stumps creep quietly back into their holes in the reefs to grow new tails and to repeat the process the following year. Just before dawn on the appointed day the swarming begins and two or three hours later it is all over, although meanwhile the Samoans have gathered them in hand nets and baskets, rapidly filling their canoes, in anticipation of the palolo feast that follows. The timing seems almost miraculous. How is it accomplished?

In the first place there is an annual

cycle that begins in the burrows immediately after the November swarming date, when the front end of each worm begins to grow a new tail. Slowly throughout the following year the worms grow and become sexually mature, ripening finally as sea temperatures rise with the onset of the southern summer—the influence of the sun. Then, instead of every worm performing when it is fully ripe, they wait until all are good and ready so that their spawning may be a communal success. They wait as it were at a starting line keyed to the sound of the starter's gun, only in this case the starter is the moon.

Scientists have found that the worms are kept in their burrows by any light stronger than that of the half moon. When the November moon approaches the full state, all stay quietly at home. By the time the third quarter of the moon begins, a week after it is full, all the worms are ready to go, those that were ready earlier and those that were late. And as the moonlight weakens, its effect is reversed and instead of repelling the worms it attracts them, and the race is on. And so year in and year out the clock keeps time.

The fireworm of the West Indies is equally fantastic, for it not only breeds according to the phases of the moon but produces a greenish light of its own. In fact the flickering light Columbus saw at night and took to be the landfall at San Salvador is now thought by marine biologists to be the shimmering light produced by a swarm of fireworms at the surface of the sea. Each month for about a week, starting the second night after the moon is full, the worms leave their protected homes on the sea floor for their monthly honeymoon. They rise and shine only when the sun has set and the moon has not yet risen, for they cannot show their elfin lights in competition with either of the heavenly bodies. And since the full moon always rises as the sun is setting, not until two or three nights have passed is there a period of complete darkness between the sunset and moonrise. This is the darkness the worms await to get together for the propagation of their race, and so each month throughout the year, half an hour after sundown on several consecutive nights until all the eggs are shed, starting on the second or third night after the moon is full, the fireworms leave the island reefs to display their ethereal light at the surface of the ocean and so attract their mates. Here, of course, the moon and the sun together compose a calendar of light and darkness, and the worms have acquired the only reproductive rhythm that will work with it in close harmony.

The moon's calendar however is not exclusively a matter of light and dark, for the tides produced by the moon may be felt by sea creatures independently of the presence or absence of moonlight. The grunion, a small fish found along the California coast, keeps lunar time whether the moon is out or not. The fish is a smelt about six inches long and its spawning periods are feast times for thousands of human beings. When the moon is full and high, cars are parked bumper to bumper along the coastal highways for many miles, and the beaches are dotted with fires for the roasting. Once again, on the second, third and fourth nights after the moon is full, during spring and early summer months, the fish swim up the beach with the breaking waves to the highest point they can reach. There the females dig into the sand and deposit their eggs below the surface, while the males, following closely behind, deposit their milt. With the next wash of the waves

Meet the Big, new **M**ERCURY for '56

You can't mistake the bold, dramatic newness of the big, new '56 Mercury. It's everywhere... in the singing brilliance of Mercury's new colours... in Mercury's sweeping new fleetness of line.

Mercury for '56 looks *big*, feels *big*, rides *big*, IS *BIG*! New higher-powered 225, 215 and 210 Hp. V-8 engines give you the most effortless pickup and passing power you've ever known. Completely new Safety-Engineered steering wheel, door locks, optional seat belts and instrument panel cushioning provide new driver and passenger protection.

See the new '56 Mercury in 3 great series—Montclair, Monterey and Custom—featuring new low-silhouette hardtop beauties. Mercury is big, beautiful, and mightier than ever!

A FINER V-8 VALUE FROM FORD OF CANADA

Proved: "Detergent Hands" can be stopped!

Research laboratory proves Jergens Lotion more effective than any other lotion tested for stopping detergent damage.*

Even if you use detergents daily, you can keep your hands soft and appealing! 447 women proved it by soaking their hands in detergents three times a day. After each soaking, Jergens was smoothed on right hands alone.

What a difference in 3 or 4 days! Left hands were roughened, reddened (the way you'd expect). Jergens hands stayed soft, smooth, white. No other lotion tested gave these fine results.

The famous Jergens formula has been steadily improved over 50 years. You'll find it's perfect for chapping due to weather, too, and so pleasant to use. Never sticky or greasy.

Get your bottle of Jergens today. Notice how much thicker and creamier it is—and what a delightful new fragrance! The world's favorite hand care costs only 15¢ to \$1.15. (Made in Canada)

Jergens Lotion

positively stops "Detergent Hands"

*From the report of a leading U. S. research laboratory

When prehumans dwelt in trees did they live by the light of the moon?

they slip back into the sea, all, that is, except those that have been gathered in hands or hats or nets by drooling and happy humanity.

Grunion spawning takes advantage of the high tides that come after every full moon and every new moon. Only this time the light is not responsible. The fish come ashore at any time up to midnight at high tide, even when the moon is fully risen. Moreover they repeat the performance, although in lesser numbers, when the dark of the moon has just passed and the first faint sickle can be seen in the evening sky. Since the moonlight has no influence it seems that the tides must be responsible and the moon's control an indirect one. Yet how the parent fish who are indifferent to whether the moon is risen or not can tell when the fortnightly high tides are due is a mystery we have yet to solve. Human beings can watch the beach and measure the tides, but fish swimming offshore have no obvious means of knowing whether high tide will be a little higher than it was the night before. Yet not only do they arrive at the right time on the proper days, but they have to be sexually ripe and ready as well. A built-in rhythm of bodily growth must play a part, a rhythm closely tuned to the fortnightly waxing and waning of the moon.

The Tide Tells Their Time

For most animals that frequent shallow seas the tides serve as a timetable. Along the shore the ebb and flow governs all activities of the shore inhabitants, but even offshore the currents change to a marked degree when the tide turns, and fish and squid which feed or live near the sea floor adjust to the new directions. The tidal change is there for those who can sense it and the grunion seems to be one of these. The pull of gravity of both the sun and the moon produce a tidal bulging of the ocean as the earth rotates beneath them.

When the sun and moon are in line with the earth, whether or not the moon is on the near or the far side of the earth, the tidal pulse is greater than at other times. This happens every two weeks, when the so-called spring tides come, when low tide is lower and high tide higher and tidal currents run faster. But as the moon gets out of line during its monthly journey around the earth, the tidal pulse gets weaker

and later every day. Then after a week it begins to get stronger again until the next fortnightly climax arrives. This is the calendar wherever the tide can be seen or felt, which is everywhere along the sea's edge wherever it may be. Yet corresponding rhythms may have become ingrown in living bodies which help them keep in step.

Whether monthly or fortnightly, lunar rhythms do exist and the question arises whether the monthly period of women has any lunar connection or is no more than a coincidence. Most warm-blooded creatures of reasonably large size have an annual breeding season designed to produce young at the most favorable time of the year for their survival, which is spring or early summer. Everything seems to be subordinated to this requirement except in the case of human beings and those human caricatures who are generally regarded as our nearest relatives. Humans, apes and monkeys breed all the year round, bringing forth their young at any season—humans in the safety of their homes or hospitals, monkeys and apes in the safety of the treetops of tropical forests. And the females in all three groups have a monthly reproductive cycle, sometimes a little more or a little less. We not only look uncomfortably alike and chatter alike, but we breed alike in a peculiarly lunar way. And incidentally, though unfortunately for the others, not only humans but monkeys and apes are subject to infantile paralysis. So we make Salk vaccine only at the expense of the monkeys we are otherwise inclined to disown!

The monthly period of humans at the present time appears to be merely a monthly period and nothing more, for it has only the same duration as the cycle of the moon and does not keep actual step with the lunar phases. Yet once upon a time, when all prehuman life lived among the treetops and woke to the light of the moon, the moon itself may well have set the rhythm which has stayed with us ever since. For there are forces at work whose effects we see even if we do not understand their nature.

We are faced here with a mystery, and the little fiddler crabs common along the Atlantic coast have recently brought it to our attention. Fiddler crabs undergo a regular darkening and lightening of the body according to the time of day and the time of the month. In the early evening the crab becomes

pale and around daybreak it begins to grow dark again. The daytime darkening protects it from the sun and from sea birds too. However, two surprising observations have been made by Dr. Frank A. Brown and his assistants, working at the famous Marine Biological Laboratory at Woods Hole on Cape Cod. Crabs kept in a photographic dark room faithfully followed the day-night cycle for the two months that the experiment lasted, without ever being exposed to light and without their biological clock losing or gaining more than a few minutes. And furthermore the clock kept accurate time whether the crab's body temperature was maintained at forty, sixty or close to ninety degrees Fahrenheit. If the clock is a metabolic one, which has been the popular theory so far, then it should vary with the temperature in the same way that metabolism varies, becoming slow when it is cold and fast when hot. Since it does not, the investigators wonder whether the crabs may be sensitive to some external regulating force we have not previously suspected, which opens a new avenue for speculation.

The day-night rhythm of color change however is not the only one and a second cycle is superimposed on the first. The crabs darken at daybreak, but they become even darker at the time of low tide and this is a time that comes about fifty minutes later every day. And once again the captive crabs living in complete darkness showed the regular daily shift corresponding to the changing times of low tide of the region from whence they came. They darkened at dawn and they darkened according to the daily change in the position of the moon, and under circumstances where neither light nor tide could reach them. Can there be some kind of rhythmical physical force in the environment affecting living organisms which penetrates darkness and brick walls to produce its effect? It may be so and the moon may have a part to play, for there are other tides besides those we see in the rise and fall of the ocean along the shores.

Just as the moon and the sun pull upon the earth and produce the oceanic tides with peaks at the time of the full and the new moon, so the same gravitational forces act upon both the earth's solid crust and its far more elastic atmosphere. The oceanic tides for the most part rise and fall about three or four feet, except in narrowing channels or bays like the Severn Channel of western England or the Bay of Fundy, where confinement amplifies the tides to fifty feet or more and where tidal power may one day be utilized. The tides in the much more rigid crust of the earth do exist, but they are minute compared with those of the seas and are difficult to detect. They are merely imperceptible shivers passing through the land, measurable only by sensitive instruments. In the atmosphere however a little pull goes a long way.

Moontides in the atmosphere have been long suspected and were first detected in 1842 from barometric mercury readings taken in the tropics. In recent years however the moontide is being read on a natural-tide gauge far up in the atmosphere, in the ionosphere which is the great layer of electrically conducting particles far above the earth. By bouncing radio signals against the ionosphere we can measure its height and by this means it has been possible to follow the waves of the moontide around the earth. And in the ionosphere the rise and fall of the moontide is as much as a mile or more.

This moon-produced bulging of the atmospheric envelope, which like the oceanic tides and the moon itself is

“We found enchantment everywhere in Britain”

say Mr. and Mrs. E. Baker of Toronto, pictured above at the little village of Selworthy, Somerset.

“We were captivated by the serenity of the countryside and the friendliness of the people. The amazing variety of the scenery, the ease with which we could reach any part of the island and the surprisingly low cost of everything made Britain a paradise. It was like opening a door into an exciting new world and, at the same time, like a wonderful home-coming. We shall never forget our time in Britain — the most delightful holiday we have ever had.” Why don't you come to Britain for your next holiday? You will find it a lot easier than you imagined. Whether you go leisurely by sea voyage or an overnight flight, you'll find you *can* afford to see Britain from top to bottom — and for far, far less than you would have thought possible. And it will be a holiday you will look back on all your life.

For details contact your local travel agent, or write to The British Travel Association, (Dept. MM/15), 90 Adelaide Street, Toronto, Ontario.

The little old-world village of Dunster, Somerset, fascinated Mr. and Mrs. E. Baker. A trip to Britain, including transportation both ways and a ten days stay, can cost you as little as \$400.00 from Toronto and \$530.00 from Vancouver.

MADE \$5,700 EXTRA MONEY IN PART TIME WORK WITH MY HOMELITE ONE MAN CHAIN SAW

18 months ago Bruno Charette, of Notre Dame de la Merci, bought a Homelite chain saw. Since then he has spent his spare time in profitable wood cutting. Last winter during the off season he cut 150M feet of wood, which he sold to the local mill. In addition he also cut and sold 200 cords of stove wood for a total return of \$7,200. His expenses came to \$1,500, leaving him a net profit of \$5,700, enough to buy a new farm tractor plus a tidy balance in the bank.

Use a
HOMELITE
for Profitable
Production
Wood Cutting

**Faster Cutting
Easier Handling
Lower Maintenance**

Whether it's for occasional wood cutting jobs or steady year-round production cutting, you can't buy a better, more dependable saw than a HOMELITE. Each Homelite is built to give you long trouble-free service, at the lowest operating costs, and backed by Terry's reputation for round-the-clock service. The Model 17 gives you more power per pound than any other saw, 3.5 horse power, yet weighs only 22 pounds complete. Mail the coupon below for full details.

later by fifty minutes every day, is of more than passing interest. Cosmic radiation coming from interstellar space with tremendous energy smashes into the atoms of the outer atmosphere and, as modified cosmic rays, penetrates to the earth's surface. These are the most powerful rays we know, much more penetrating than any produced in atomic explosions. In fact cosmic rays are known to penetrate at least a quarter of a mile of solid earth into deep mines where they have been recorded. And as the atmospheric moontide passes over us it produces a waxing and waning of the cosmic ray showers falling upon the earth. Why it should be so is a mystery, but the fact remains and is something to think about. At least here is a force that keeps moon time and can penetrate the tissues of any living creature, no matter how well protected they may be by darkness and rocky walls. Whether we have here the actual timekeeper employed is not yet possible to say, but we do know that cosmic rays affect our own and all other creatures' hereditary qualities and for all we know to the contrary the monthly rhythms of both crabs and humans may be governed by them too.

What Power Has the Moon?

Mankind has become conscious of the cosmic clocks supplied by the sun and the moon, but it is a case of discovery only, not invention. The sun and the satellite have been keeping time from the beginning, keeping time because the earth turns upon its axis and journeys around the sun in an elliptical course, and because the moon itself moves around the earth each lunar month. The regular fluctuation in both solar and lunar light, in the gravitational pull upon the sea and air, and the showers of cosmic rays, have all had the life of the earth in their grip since time out of mind. Animals tell time virtually under compulsion. The signals exist and the living organisms respond, for otherwise they fail to live or reproduce.

We ourselves are more complex than the rest, but in our own way and in our own time react to the rising moon or the afterglow of the midsummer sun in a definite and consequential manner. Priests and poets through the ages have made the moon the Goddess of Love and the power of suggestion has been added to whatever subtle influence the moon may have herself. We of this world are creatures of vision in some degree, needing light to find our food and find our mates. Sunrise and sunset, full moon and crescent, long summer and short winter days, make the tune to which we dance out our lives. Neither fish nor humans are excepted. ★

The Only Woman Who Ever Puzzled Me

CONTINUED FROM PAGE 19

I forget what the potluck was that day. I do know it was good. Everything Ressie Duncan cooked was good and my memories of the Cove are redolent with the odors of her stews, succulent meat and vegetables in an herb-flecked gravy on which floated dumplings as light as an angel's pinfeather; her fillets of halibut, haddock or cod, fried to Afric brown yet innocent of grease. She may have lacked humor and been limited in perception but if anyone ever rated a *cordon bleu* it was Ressie Duncan. During the meal it was settled that I stay with them at a very modest charge.

"Best not decide till you've seen your quarters," advised Brad. "We've no store-bought mattresses or fancy gear, an' the plumbing's just a chamber pot and a convenience back o' the woodshed. Still you're welcome as a run o' spring mackerel to what we've got."

I gave a sigh of repletion. "I'll sleep in your woodshed if I can enjoy Mrs. Duncan's cooking three times a day." I meant it.

He chuckled. "She don't do too bad. 'Course I taught her myself. Couldn't fry a 'tater when I first married her, but she learned."

"You're making that up, Brad Duncan. I could cook as well as teach school long before I met you." Her annoyance wasn't feigned. She'd no patience with jokes, large or small.

Later on she took me upstairs to my quarters, a small neat room with a sloping ceiling, hideous wallpaper and a window facing the sea.

"The bed's real soft. A feather tick on top of the straw makes it comfortable." It was a comfortable bed I found, and almost a museum piece with its four posts topped by carved dolphins.

"Brad's grandfather made that bed. He used to carve figureheads for vessels, times when vessels had figureheads. A master at it, Brad says. I daresay. I never met him nor any of Brad's family. Brad was as kinless as me when we first met. We still are, 'cept for each other. Kinless and childless."

Downstairs she made me free of the parlor. "Brad and I sit in the kitchen, mostly, but you're welcome to take your ease in here whenever you like."

A man would find scant ease in here I thought, looking askance at the spindly parlor suite, rocker, armchair and settee brave in vermilion and yellow plush, the centre table draped in white crochet on which a conch shell hobnobbed with a vase of paper flowers, the two cane-bottomed chairs flanking a cactus on a rustic stand. Fierce-eyed enlargements, male and female, glared from the walls, resembling neither Brad nor his wife, though surely only family ties could warrant their presence. I sought the small bookshelf in a corner. I'm always interested in what people read. Thrilling Experiences in Discovering the Poles, The Tragedy of the Titanic, The New Magdalen by Wilkie Collins, three books by Mary J. Holmes, some Atlantic Readers, an Arithmetic for Common Schools . . . ah yes. Mrs. Duncan had been a teacher. By them were two volumes on navigation.

"Brad got them when we were first married." She'd been following my glance. "When he was studying for his ticket."

"His ticket?" I puzzled.

"To be a ship's officer. Third mate,

The Wonders of Scotland . . .

Tantallon Castle—stronghold of the Douglasses, overlooking the North Sea. It dates back to the latter part of the 14th century and is romantically associated with Sir Walter Scott's "Marmion".

second, mate, captain, you have to write your ticket . . . pass exams, that is, for them."

"I see. In that case I suppose I ought to call Mr. Duncan, Captain Duncan?"

"No." Her eyes and voice became bleak. "Brad Duncan's all he can claim." She busied herself with the cactus and I bit back the questions I longed to ask. It was none of my business. Yet, forty-odd years at sea! Surely a man deserved advancement in that length of time. Perhaps when they knew me better I'd learn the answer to this little mystery. Meanwhile I'd better get some painting done while the light was good.

HOW I painted that wonderful, wonderful summer. The Cove is a perfect horseshoe bitten from the rolling granite hills. At ebb tide the fishhouses and wharves seem on stilts, rimming the water's edge, with the dwellings scattered higher up wherever the terrain is level. No trees grow there, no lawns or gardens, only gorse and thick-stalked weeds that flourish on practically nothing cling to the barren rocks; but it is beautiful. Not tourist-bureau beautiful . . . beautiful as in El Greco, say, with discipline and integrity in the blues and greys of sea and rocks, a sternness in the contours, a pride and fortitude in every low-eaved cottage. I painted what I saw and it was good.

The Duncans didn't think so. Mrs. Brad, as I learned to call her following the custom of the Cove, was horribly disappointed when she first saw my work, though all she said was, "My, you use a lot of paint." Brad said nothing but "Humph!" I'm afraid he thought me a sissy, for on the only occasion that I went with him to the fishing grounds I was abominably seasick. He could overlook me "messin' around with paints" had I only had stomach for a morning swell. So he liked me with reservations. Mrs. Brad took me as I was and mothered me at a respectful distance. Anything she could wash she washed, anything she could darn she darned, and her cooking was superb.

"You hadn't ought to make your own bed," she protested the first morning that I coped successfully with the feather tick.

"Force of habit, and army training," I told her. She had to give in for I made my bed before I went down to breakfast but she refused to let me help her with the dishes.

"It's woman's work. It demeans a man to wash and wipe."

I laughed. "My dear Mrs. Brad, some of my friends should hear you. Nearly all the married ones are working couples and they share the housework, meals, dishes, everything."

"Tain't fitting," she persisted, removing the towel from my grasp. "Men's work, women's work—they don't mix. Leastways not at the Cove."

Certainly not at the Cove. Bit by bit I discovered how rigid were the rules, Victorian vestiges, that still governed life at Halcyon Cove. A man provided shelter and food; he was master of his house, keeper of the purse, the great Mr. Big. He might do a few chores for "the woman," such as making kindling or filling the woodbox but he'd never stoop to clean any litter he might make on her newly scrubbed floor while he was doing such tasks. He might or might not carry in water. A strong-minded woman was anathema, and all men feared the stigma of being hen-pecked. Cove women didn't smoke or drink or use make-up, though they crimped their hair with home permanents to dire effect.

Out of doors men walked ahead, fol-

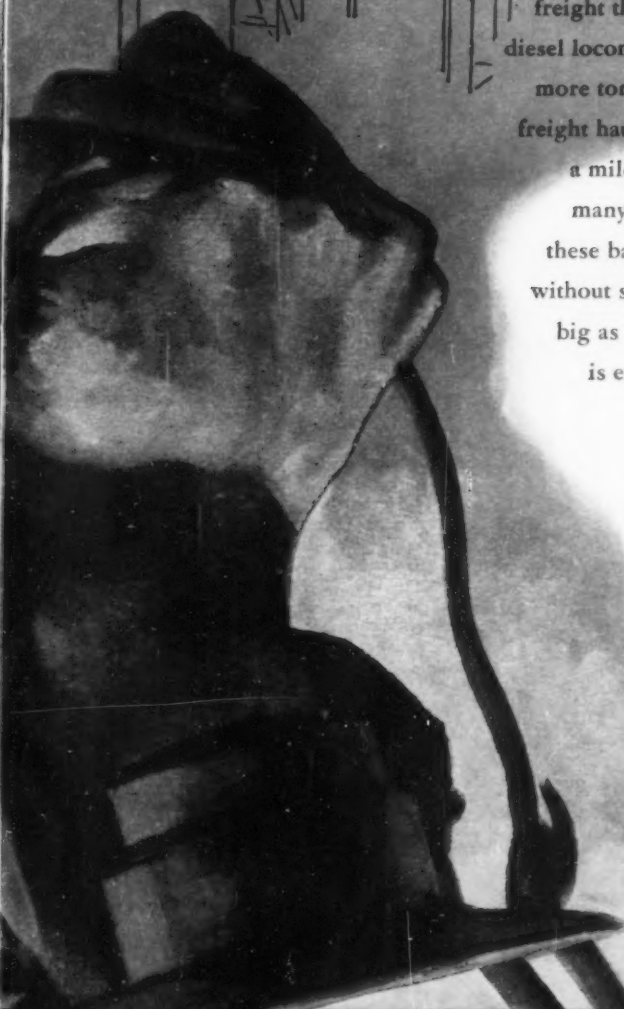

GENERAL MOTORS
LOCO MOTIVES

GENERAL MOTORS DIESEL LIMITED

GENERAL OFFICES AND PLANT, LONDON, ONTARIO. Sales Headquarters: INTERNATIONAL AVIATION BLDG., MONTREAL, QUEBEC

TALK ABOUT BEING ON THE JOB...

Did you ever notice when you see a particularly long freight there is usually one of those new General Motors diesel locomotives up front? That's because G.M. units haul more tonnage at the same speed... even faster. On long freight hauls we can meet tighter schedules without going a mile an hour faster, simply because we eliminate so many service stops. And they keep on the job too... these babies. Most of them go 300,000 miles and more without stopping for major maintenance. In a country as big as Canada, moving freight fast over long distances is essential. As freight conductor from 'way back, I can tell you these new diesels do move it faster—and clear the line for more traffic!

NEXT TIME, SHIP BY RAIL!

Watch the difference the diesels make! Over 600 G.M. diesel locomotives made in the vast General Motors Diesel plant at London, Ontario, are now working round the clock on passenger and freight runs on Canada's two great railways and on 9 other independent Canadian roads...moving goods...moving people...keeping Canada on the move!

lowed by their wives and children. On the first Sunday morning going to church I caused Mrs. Brad much distress by lagging behind Brad to wait for her. Only courting couples walked side by side.

Yes, the Cove was a man's world.

I STAYED with the Duncans for three weeks that summer and my sketch book is filled with bits and pieces that bring the holiday back to me, yet I was woefully unobservant. I have sketches of Brad and his helper, Dennie Grono, at work in the fishhouse; of the schooner Karl M. that called at the Cove twice a week to take fish to the city; I have drawings of the flakes on which cod dried to old ivory in the sun, of drying nets, and beached dories. As I look at these drawings I can smell tar, salt, iodine, rotting fish, seaweed, feel the sea wind against my cheek, hear the melancholy foghorn at the lighthouse... and know less than nothing about Brad's actual fishing.

As to the relations between Mrs. Brad and her husband, they were ordinary, I guess. She was a dutiful wife, and if I never saw any passages of affection, neither did I hear any nagging or bickering. They took each other for granted. Not a bad thing in the frosty sixties.

On my last evening at the Cove, Mrs. Brad produced a piece of burlap taut in a wooden frame about two by three feet. She aimed to hook a mat, she said, and wondered if I'd draw her a "pat-trun."

"What kind?" I asked, thinking she'd want a simple geometric design or a stylized leaf and flower.

"It's this calendar picture. Smith's General Store, Brad," she said to her husband, "the one of the moose."

"That'd make a real fancy mat," he approved, "if you can manage it." This was to me.

I'm no expert on animal anatomy, nor, I suspect, was the original artist; however, I took a crayon and, enlarging as I went, made a faithful copy for her to follow with her mat hook and rags. The moose was standing in a shallow pond, water up to his shins... or whatever corresponds to shins on the monarch of the forest, munching the lily pads. One lily pad dangled from the corner of his mouth and his face had the benign expression of a spaghetti lover at his favorite occupation. Sunset gilded the water, the tangle of bushes at the rim of the pond, the trees in the background, and the sky was a riot of reds, mauves and orange-yellows.

"You'll need plenty of colors," I observed, "if you follow this exactly."

"I have scads of mat rags," she assured me. "I picked them over today. If I haven't the right colors I can dye some." She brought a basket from the hall. "Look at these."

"Indeed you have a selection." I picked up a handful of gaudy strips. "Here's a red that's perfect for that bit in the corner, isn't it, Brad? And this will do for those trees on the skyline."

He didn't reply and I felt a flash of annoyance. Did he think my interest in Mrs. Brad's mat another sign of effeminacy and was his silence a snub? Hang it all! She's asked me to draw the design. He'd watched while I was at work, even made a suggestion or two about the background. Nettled, I repeated my question. Brad shrugged his lean shoulders. "Don't ask me about your reds and greens. I can't tell one from t'other." He laughed harshly. "I'm a color-blind freak, ain't I, Ressie?"

"Color-blind?" I echoed. "How...?" I nearly said "awful" and changed it to "odd."

"Yeah. That's what I am."

"Funny thing, I never knew it till I

was married. Come as a surprise when they told me what ailed me."

"They?" I was trying to imagine what Brad's world was like. Did all things appear in shades of grey, or did it lack only one or two spectral colors? Did a red rose have a scarlet leaf? Was a bluebird no brighter than a sparrow?

"Board of Examiners. Navigation School. When I went to write my ticket. They said I couldn't tell port from starboard lights . . . so they washed me out. Quite rightly. A man standing watch needs to tell red from green."

"You could tell them apart," Mrs. Brad broke in hotly, "if you tried. Maybe they look more alike to you than to most folks, but you could have learned the difference if you'd put your mind to it. No. Not you. You took their say-so and 'ordinary seaman,' 'carpenter,' 'cook' is all was ever writ after Brad Duncan in ships' articles."

"At least I've no foundered vessels or drowned men on my conscience." The kitchen picked up the bitter tones and I

knew it wasn't the first time the walls had caught the altercation. "In the dark, with fear in my mind, can't you see I'd never be sure? Dear God! Help me to guess right. That's not seamanship." He turned to me. "She thought she could learn me. Maybe a smarter man could catch on but not me. I knew in a pinch I'd get rattled and make a mistake."

I murmured something sympathetic, avoiding one glaring fact. Surely a young man with ambition, and Brad must have had ambition, could have found another path where his handicap was nullified? He read my thoughts.

"Once a seaman you ain't happy no place else. Salt's in your blood and land holds no comfort."

"You're fain to creep back at long last, though. When they won't sign you on 'count of your age, you creep back to dry land. And what have you got for your years at sea? No pensions, no gold watches inscribed, 'long and faithful service,' no silver trays. Nothing."

"Hold your tongue, woman. I'm

content if you ain't. We've got our own place and a bit put by, we don't owe a cent, and I'm still hale and hearty if I am sixty gone. I never made you a captain's lady, like you hoped, but I've done my best for us both. We've got a lot to be thankful for."

"Thankful for small mercies," she replied tartly. Very small mercies, she implied.

Pity for her and respect for Brad made me, wisely, take no sides. She must have been lonely in the long years when he was at sea. On the other hand Brad, with the sea in his blood, had dedicated himself to service without hope of reward. Few men could do that.

After that night I returned to Toronto, the office and the dismal grind, until one grand glorious day a few months later when a certain beer company, modern patron of the arts, bought three of my Halcyon Cove paintings.

I resigned at once. The next years are a patchwork of dark and light, of

wandering, of work, and it wasn't until the fourth summer that I returned in June to Halcyon Cove.

I FOUND the Cove had changed. More and more dwellings had been put up—not old-style Cape Cod, but jerry-built little boxes of colored tar paper, reds and greens and imitation brick, the kind a man can put up in a day if he's content to be housed in one or two rooms. They disfigured the Cove. I said as much.

"Folks have got to have a place to live," commented Mrs. Brad. "Lots of strangers have moved in, for it's cheaper out here. We're only thirty miles from the city and you'd be surprised how many travel back and forth to work. It's just an hour's car ride."

"I've noticed there are a lot of cars," I said.

"More cars, less boats. Hardly any fishing 'cept by a few old-timers like me and Sid Innies," said Brad. "Used to be different. Only things open to a Cove man, years back, was offshore fishing or going aboard a vessel. Now he's got opportunities galore. Truck-driving, defense work, bridges, roads—you'd be amazed at the jobs they hold. Some take courses, too, and learn trades. You mind Dennie Grono? He's a plumber, now." Brad sighed. "Ah! The times that was. You knew the Karl M. was lost?"

"No!"

"Yes. Went down with all hands in a September gale. Now a truck comes from the city to pick up the fish. Weren't worth while to put another vessel on the run."

Things had changed. And people. Mrs. Brad remained the same, a little plumper perhaps and less active; the greater change was in Brad. He was leaner than ever and his skin had a waxy tinge that worried me. He'd been an excellent trencherman but now he picked at his food and complained of indigestion.

"You put too much seasonin' in your grub, Ressie," he'd say. "What's come over you? Stews, roasts, hash, every blazin' bite near burns the gizzard outa me!"

"I cook the same as ever," she'd reply placidly. "Don't eat so fast and take a dose of soda."

Brad would swear and growl and top his meal with bicarbonate.

I tried to discount his symptoms at first for many persons have poor digestion as they get older. Then one afternoon I came on him leaning against the fishhouse door, clutching his breast.

"Brad! What's the matter, man?" I cried in alarm. "Can I help you?"

"Just . . . indigestion . . ." he gasped through grey lips. "I'll be all . . . right. It's . . . nothing."

I waited anxiously, relieved after a minute or two to see the color once again in his face. He straightened up.

"Ahhhhhhhhhh! That's better. I get colic every time I have cod and pork scraps." We went inside and sat on a bench.

"Brad," I declared firmly, "you're a sick man and you know it. An attack like this isn't simple indigestion. Why don't you see a doctor?"

"He'd only give it a fancy name."

"That's stupid, Brad. You mustn't take chances with your health. Let me run you into the city this afternoon. You could have a check up and be back by supper time."

"No. You mean well, boy, but I'm not going to a doctor."

I felt it was useless to argue with him then. I'd have a talk with Mrs. Brad, I decided, before I tried again. He guessed my thought.

"Don't you say a word to Ressie about this. 'Twon't change things and

I'm not going to worry her. She's enough to worry her, more's the pity."

My suspicions were kindled. Something other than ill health preyed upon him. Although I dislike persons who pry and shrink from being counted in their number, I braved a rebuff.

"You're in trouble, Brad. I know you are. What's the matter?" I asked.

For a long moment he waited, his jaw clenching and unclenching with emotion and I put on the pressure of silence. Finally he said, "I've lost everything I put by . . . three thousand I had in the bank and two thousand

insurance. Gone. Nigh every cent I had."

"How dreadful. What happened?"

"Ever hear tell of the Provincial Industries and Thrift Corporation? It went bust about a year ago. Government investigation, a big to-do in the papers and law courts. A hundred and thirty thousand dollars missing, nobody knows where. Thousands of small shareholders robbed . . . I was one of 'em."

"How could you risk all you had?" A tactless question. Poor gullible Brad.

"A glib talker came around and hooked me. He's in jail now, though that's small comfort. Scheme was to build up Nova Scotian industries, like model dairies and fish-packing plants. You'd get up to eight or ten percent on your money and were guaranteed never less than six percent. Sounded mighty good."

"Yes," I agreed.

"I was cautious so I only put in a thousand at first. In less than a month I got a cheque for thirty dollars and a typewrit slip. This weren't interest, it was clear profit. Dividends. Thirty

multiplied by twelve comes to three hundred and sixty dollars. Multiply that by five . . . seemed like I was throwing away a damn good chance if I didn't give 'em the rest of my money, so I did." He sighed. "That thirty dollars was all I ever got."

"That's why I can't go to a doctor," Brad went on. "I can't afford to be told I'm sick. I'm not. It's just this plagued worry, 'worry, worry'—no wonder my stomach's like a churn. I can't make enough fishin' alone, and it's impossible to get a helper. It don't take much to keep us. If only there was a bit comin' in steady. When I think o' them damn robbers! We could have lived five or six years on what they stole from me." He got to his feet. "But I've no right to burden you with my troubles, boy. Things'll work out somehow. They always do."

"Have you thought of working in the city?" I asked tentatively. "Checking ships' stores, for instance, or keeping watch?" Surely work for Brad would be available in a great seaport like Halifax.

"We couldn't leave the Cove. Ressie and me'd be as out of place as a couple of rockin' chairs in a dory."

True. I couldn't imagine them in a city tenement and Brad was too old for the strain of traveling sixty miles, day in, day out, by car. He was leery of cars anyway. Only once had I persuaded him into mine.

"Funny. I never touched that money while it was in the bank. Good times or bad we managed without it. Now it's gone, I'm all upset."

Ah! Brad, I thought, they robbed you of your sense of security, a far viler theft than mere money.

I'D MADE no promise so at the first opportunity I talked with Mrs. Brad about getting him to a doctor. He wasn't well, I was certain, and the strain of heavy lifting—for full nets are heavy—plus his mental distress, might be causing a stomach ulcer, or something. I'm no medical man but I knew he wasn't in good shape.

"Yes," Mrs. Brad agreed completely, "he ought to see a doctor. I've been after him. It's his nerves, I think." Her placid face showed no deep concern. "Worry plays cruel on your nerves. He told you what happened to the money?"

"He did."

"I told him it wasn't safe, now see where we are." She moved to the stove and stirred a pot.

I looked through the window across the Cove. Monday washes billowed near every dwelling, splashing grey rocks with color, and a bright ribbon of children steamed from the schoolhouse door for morning recess. A thought struck me.

"Couldn't you go back to teaching, Mrs. Brad?" I knew the school was overcrowded and there was some mention of having double sessions, or building on another schoolroom next term.

"Gracious, no!" She was shocked at my proposal. "Brad wouldn't hear of it, though teachers are scarce and my license is permanent. He'd never let me."

I'd forgotten the mores of Halcyon Cove. A man supported his wife, not vice versa. I couldn't help balancing it against Brad's prayer for a "bit comin' in steady." Tradition, alas, would tip the scale. I had another inspiration. "Why not board the teachers, then?"

"Oh! no." This time her denial was more fervent. "I'd never consent to that."

"Why not?" Her faded eyes held pity for my innocence. "Brad's a good man and no skirt-chaser, but he's human. I

don't want some flighty young thing around making trouble between us."

"That's ridiculous," I protested, trying not to smile.

"Ridiculous or not, I shan't risk it. Of course, if Brad thinks of it himself I'd have to . . . but don't you put the idea in his head."

My ideas were all exhausted so the matter was dropped though privately I resolved to pay high rates this time for my own board at the Cove. And since they were not overly concerned about his need for medical care, I was in no position to force a doctor on them, no matter what my own misgivings.

About noon two or three days later as I was sketching by Brad's wharf I saw him coming in from sea. He cut the engine and guided the boat to anchor in the channel, for the tide was low; then getting into his dinghy, moored and waiting there, he began to row toward the shore. Brad always faced the bow of the boat, thrusting instead of pulling against the water, the oars moving with strong vigorous strokes only a lifetime's practice could achieve. I gathered up my things and walked around the fishhouse to meet him on the wharf. By this time Brad's boat was no longer in my line of vision, since the tide, as I've said, was at ebb, but was hidden at the foot of the wharf. He'd tie it there and climb the ladder nailed at the side of the pilings.

Three gulls wheeled nearby and for an instant I thought the unearthly cry, sharp and sudden on the noontide air, came from them. Then Brad's head and shoulders came over the edge of the wharf, face ashen, mouth working soundlessly, and I knew tragedy was upon us.

"Hold on, Brad! I'm coming." I darted forward reaching for him. Too late. My fingers barely touched him as he slipped from the ladder, eel-limp. Dead, I am sure, before he crashed into the little boat below.

NO INQUEST was necessary, the doctor who was also the district coroner decided. Death was due to coronary thrombosis. Heart failure. Heart strain. Brad's "indigestion" had been an unheeded signpost to the presence of disease.

I'll skip the next three days. Death shouldn't mean a parade of ghoulish, prying humans, from the very old to babes in arms, "viewing the remains" and "payin' their respects," recounting with macabre relish how they "knewed he weren't for long" and "anybody could see he was failin'." It shouldn't be a gloomy festival, a country fair in crepe, with every Jack, Jill and Jethro who could possibly attend flocking to the cottage, thence to the church, and . . . still going strong . . . to the corpse's last resting place. It shouldn't be, but it was.

Inland about a mile, where there is earth enough for a grave, the Cove people bury their dead and there, on a fine June afternoon, we buried Brad Duncan. A small old graveyard it is, with crumbling moss-grown stones dating back a hundred years and shapeless mounds covered with creeping ivy and wild briar.

Caught by the sea wind the minister's robe billowed against Mrs. Brad's funeral silk and I forgot to listen, lost in comparing the two blacks, the dull greens in the cleric's gown and the zigzag highlights on hers. Accompanied by a neighbor, Mrs. Butler, a thin woman with shoe-button eyes, she stood a little apart from the rest. Mrs. Brad, to quote another current phrase, was "bearin' up good." She had shown amazing self-control.

"So this is what it's like," she'd murmured to me at the wharf as we waited for the doctor. "You know . . .

SHERATON

NEW NAME IN LUXURY LODGINGS IN LOS ANGELES

The Sheraton-Town House hints happily of Hawaii. You can enjoy a lanai suite with sheer walls of glass (and breakfast on your private balcony)! You can loaf an hour by the sunlit, turquoise swimming pool . . . yet still be in time for your business day. For the tranquil Town House is just five minutes from the heart of Los Angeles.

Dinner is served on the Garden Patio in the California tradition of outdoor living—in the walnut-paneled Garden Room—and in the Cape Cod Grill where East *does* meet West.

The Sheraton-Town House is among the newest names in the growing Sheraton network. Like the Sheraton-Huntington in nearby Pasadena, the Sheraton-Palace in San Francisco—and other famous Sheraton Hotels across the United States and Canada—it offers luxurious living and a distinguished address on your travels.

Persistent Symptom

My health was once superbly sound—
It's useless to deny it—
Although I kicked the gong around
And filled the nights with riot.
And then began that dire warning:
I'd feel like Hades in the morning.

But now my evenings glow with no
Deplorable effulgence.
The tide of life is running slow.
I've given up indulgence.
I'm upright, pure, reformed and, lastly,
When morning comes I still feel ghastly.

P. J. BLACKWELL

I've often wondered how it would happen. When Brad'd set off on a voyage, I'd think . . . will this be the last time I see him? Will he be lost at sea? Every good-by was . . . sort of final . . . if you know what I mean. And now, when it is final . . . Her voice trailed away, then added, "He was a good man, was Brad."

Every parting is a little death, I thought.

She hadn't cried, unless in private. Though, come to think of it, she'd had no privacy since we brought Brad's body home, for hard on the heels of the news Mrs. Butler had come to lend aid and solace to the bereaved and to my knowledge hadn't left Mrs. Brad alone for five minutes. They'd slept together, sharing the bed that Brad had so lately warmed, and seemed puzzled when I offered to let them have my room and sleep on the couch in the kitchen. Yet we are called the insensitive sex.

Mrs. Butler returned to the cottage with us after the service. "Now you just set in the parlor with Mr. Gregg," she said to Mrs. Brad, with a fine mixture of command and coaxing. "I'll get supper. Funerals is terrible wearin' and you need to rest."

I was glad she made the suggestion for I wanted to talk with Mrs. Brad in private. I'd decided to buy her cottage, allowing her to remain in it, of course, as long as she wished. My resources were limited but I knew I could borrow the money and the purchase price would give her something to live on. The funeral expenses, I'd gathered, would entirely exhaust Brad's shrunken bank account. Some of my friends would think me foolish and quixotic, burdening myself with debt for one who had no claim on me. That was my affair. It would be pleasant to have a *piéd-à-terre* whenever I returned to Nova Scotia. I had no other responsibilities or dwelling, for my own mother had died when I was slogging it out on the Scheldt in '44, and my sisters were married . . . and what else could I do? Brad Duncan had been my good friend.

"I'M GLAD to sit down," Mrs. Brad admitted, taking the rocker while I tried out the spindly settee. Considering the strain of the past few days she looked very fresh. Dishes rattled from the kitchen and I tried to think of a tactful way to broach my plan before Mrs. Butler, a quick-moving woman, would call us to the table, when Mrs. Brad cleared her throat. She too, had something on her mind.

"Allistair," she said, "I hope you won't take it amiss but I'd like you to leave sometime tomorrow."

"Leave?" I repeated stupidly.

"Leave?" Her pudgy hand fluttered deprecatingly. "I don't mean leave the Cove, but there's other places you can board while you're in these parts."

"I don't understand."

A spot of color tinged her sallow pendulous cheeks. "Mrs. Butler can't stay after tonight," she replied primly, "and it wouldn't look right, us being

here alone. Folks'd talk for sure."

Irritation and amusement battled in me. "Oh come now, Mrs. Brad! Surely . . ."

"A widow has to be careful. I've always had a good name, I aim to keep it."

"Of course I don't wish to cause you embarrassment," I assured her. Would she think her good name threatened if she accepted my offer, I wondered? Would Cove tradition forbid her taking aid from me? And how could I make her change her mind if she refused? Ignoring the question of my departure I tried to lead up to my own plan.

"Have you decided what you'll do?"

"Yes, indeed, I have," her reply was firm and prompt. "I'm going to board the teachers."

I nodded. With Brad gone she'd see her way clear to do that.

"Of course," she went on brightly, "that won't be till September. But I can manage fine till then on my forty a month."

"Your forty a month?" Had I been mistaken? Surely Brad had told me all his insurance had been withdrawn. Had he been wise enough to reserve this small annuity for her?

The spot of color deepened as she half-whispered behind her hand and cocking her head in the direction of the kitchen, meaning she didn't want Mrs. Butler to hear. "The old age pension. That's forty a month, you know. I'll apply right away."

"But you can't get that till you're seventy." My glance went to the silver-washed nameplate on top of the bookcase which the undertaker had removed from the coffin before Brad's body was taken to the church. Such a plate, I'd thought, served as identification should the grave be opened at a future date. At the Cove, on the contrary, it was kept as a grisly memento of the departed. I read the lettering again.

BRADFORD JOHN DUNCAN
AGED SIXTY-FIVE

She gave a sheepish smirk. "I'll be seventy-three come July. I was near eight years older than Brad, though you'd never guess it, would you?"

"Seventy-three? You mean you might have been getting this money for three years?" I was incredulous. "Why, in heaven's name, didn't you?"

"Oh! I couldn't. I'd never told Brad and he always thought we were the same age. He'd have been terribly mortified. I kept it from him right to the end."

The complacency in her voice made my flesh crawl. Vanity? Stupidity? Callous indifference? From what motive stemmed this crowning irony of Brad's ill-starred, unlucky life? Female spiders, I'd read, devoured their mates. What manner of woman was she, this fat black widow sitting smug in her ugly little parlor?

She rustled her funereal silk to show that confidences were at an end and raised her voice.

"So you see, Allistair, I'm going to be all right."

After a long moment I answered. "Yes," I agreed heavily, "you'll be . . . all right." ★

"Another kindness was shown me by the steward who served my 5-year-old son's meal early, in order that I might enjoy more quietly my own meal. My son also got his wish to meet the pilot."

— Passenger Citation
(Toronto to Vancouver)

"My daughter uses a folding wheel chair and when we came down at Bermuda the stewardess suggested taking Janet out in her chair for some sunshine. We know that this is very unusual service."

— (U.S.) Passenger Citation
(Montreal to Barbados)

"My sincere appreciation of the service, hospitality, goodwill, and general cheerfulness of the crew. As a traveller on several leading airlines I can't recall a flight that has been bettered."

— (British) Passenger Citation
(London to Montreal)

"One is always a bit worried when three children travel alone for any distance. It is difficult to express the assured feeling it gave me to see the attention given these three children by TCA staff."

— Passenger Citation
(Toronto to New York City)

"Alertness and general all-around good fellowship"

"I would like to comment on the splendid personalities and alertness and general all-around good fellowship of the TCA employees with whom I've come in contact. Every step is taken that could make my trip as carefree and enjoyable as possible."

— Passenger Citation
(Kapuskasing to Montreal)

Over 460 skilled pilots fly TCA's fleet. More are being trained for the planned programme of fleet expansion.

Veteran TCA pilots' new assignment...

...bringing "turbo-prop" era to North America

Veteran two-million-mile captains went back to "school" to learn the fine points of the Viscount. (They took to the new turbo-prop airliner like a cat takes to cream!)

Air crews, flight personnel, ground and maintenance staffs sat down in their classes to study their new routines.

New personnel, too, are being trained to serve TCA's expanded fleet, which will increase TCA seat capacity by 25% during 1955.

Of course, the vital spark of TCA service isn't supplied by class-training. That attitude of friendliness and alert desire to serve are things people are *born* with. We only pick them and train them for their specialized jobs of serving you in TCA.

Liechtenstein Letter

CONTINUED FROM PAGE 4

When you have left the pleasant prosperous city of Zürich it is only a short journey to Liechtenstein, and so we came to the little principality and drove up a hill to a hotel as modern and smart as anything a dollar millionaire could desire. We telephoned Paul Gallico who invited us to come at six o'clock to his house at the top of the mountain where we could swim in the pool before eating the dinner which he would personally prepare for us.

Our car climbed up and up the winding road until against the sky line we saw Gallico waving welcome and encouragement. The groaning car made it all right despite a brawl between the left front fender and a concealed rock in the side of the road.

What a sight it was from this five-thousand-foot eyrie! Far below was the River Rhine, looking ridiculously like an unused motoring highway. The sun was wrapped in mist and the mountains were like a setting for Das Rheingold.

"You will swim of course?" said Gallico. We looked at the disconsolate little pool trembling in the mountain breeze. The chill mountain air was already seeping into our bones. My own thoughts were on such incongruous things as a rug and a roaring fire. Even a neat whisky would have had a certain medicinal attraction.

"I don't think we'll swim," said my wife. "We are really rather tired and it would be lovely just to sit and look at the mountains."

"What about a nice cold Martini?" asked our host. With a last indignant glare the sun went down behind a mountain peak and the temperature fell another ten degrees.

"Would you mind," said my wife, "if we went for a walk? I'd love to see more of the place."

"Sure," said Paul. "I'm cooking the dinner so I'm out of the picture for a while."

So off we went on the Lone Trail but hardly had we passed a solitary wooden cottage when we were joined by a kitten that offered to be our guide.

Is there any animal, human or reptile, that can compare in unconscious gracefulness with a kitten? The games this one invented on the way—its pretended fright, its mock heroics, its daredevil leaps from twig to twig, its cozy rubbing against our legs to show that the whole thing was great fun and he was glad we had turned up.

"Can't we buy him?" asked my daughter. "I'd take care of him in the car." What a mad idea . . . utterly preposterous . . . I suppose, though, he would not really take up much room.

Fortunately the kitten bolted at this moment. He had seen a twig move, he was full of suspicion and disappeared from this narrative and our lives, a happy lonely little creature playing imaginary dramas in a setting fit for the Twilight of the Gods.

The temperature had dropped ten more degrees by the time we returned to Gallico's habitat and the long asphalt-colored roadway called the Rhine was settling down for the night.

By this time our number for dinner had been augmented by a handsome young woman, the Baroness Virginia von Falz-Fein. In spite of her name she was English, being the daughter of the eminent barrister Sir Henry Curtis Bennett.

While Gallico puts the finishing touches to the dinner and we sip an ice-cold glass of sherry let me tell you the strange story of the baroness.

After the Hitler war her wanderings took her to New York where she met a handsome young Russian named Baron von Falz-Fein. He was a White Russian who managed to escape from the earthly paradise which Lenin, Trotsky and Stalin had conferred upon the Russian people.

He had one obsession—photography—but after meeting Miss Curtis Bennett in New York he had two. They married and went to live in the Principality of Liechtenstein where the ruling prince granted him sanctuary and citizenship.

But photography, although a pleasant hobby, was not quite a career for the baron, and when you have photographed one mountain you have pretty well photographed them all. Fortunately, at this stage in their lives the former Miss Bennett brought English commercialism to the aid of Russian romanticism. Why not persuade the British travel agencies to route their European touring buses to Liechtenstein?

Off she went to London and, like Portia, pleaded for justice to the little principality. The British tourist

MACLEAN'S

moguls listened but were not impressed. Their buses already went to five continental countries and there would be no advantage in routing them to a sixth.

"But you will be offering one more country than your rivals," said Portia, "and it is really not off the beaten track."

Probably to get rid of her, the moguls finally agreed. But already the young lady was thinking ahead. Why not a shop right in the square where the buses would stop to sell quaint cuckoo clocks, national hats and printed handkerchiefs?

This is the story she told us at Gallico's house and she invited us to come at noon to the shop to see what happened when the buses rolled up.

We waited next day at the appointed hour. Up came a huge omnibus and stopped right outside the shop. Out got the touring Britons and swept into the shop like a tidal wave. Pound notes were fluttering in all directions and half crowns were jingling like sleigh bells, while the accents of Lancashire, Yorkshire, Wales and London created absolute uproar.

In all the crush and clamor the baroness and her cool assistants kept their pretty heads. Business first was their motto. The handsome young baron looked on with an air of being pleased but puzzled at the eagerness of the Britons to get rid of their money.

"At first," the Baroness told us, "we just had things that would cost a shilling or sixpence but we soon saw our mistake. They seem to be absolutely rolling with money. Look at them!"

All battles come to an end. The recall was sounded and out poured the tourists, festooned with strange hats, pictured handkerchiefs and carrying tinkling music boxes. Off went the bus to the accompaniment of shouts and

waving hands. That was Liechtenstein, that was, and the tourists would have summated to show for it when they got back to Wigan.

But now I must tell you that the principality has an attraction of quite another sort, an attraction which goes to the head like strong wine. There is no income tax in Liechtenstein.

Read those words and luxuriate with me at their brevity and simple charm. There is neither income tax nor surtax in Liechtenstein. Your money is your own, save for local rates perhaps and a luxury sales tax. And what is the result? No less than four thousand foreign companies are registered in the tiny principality.

Not unnaturally there were a surprising number of foreigners who developed a deep desire to become Liechtensteiners. But the government of the principality decided on a policy of patriotism at a price. A foreigner could only become a full-fledged subject of the principality by a payment of ten thousand pounds or approximately thirty thousand dollars. By which you will gather that the principality may be romantic but not wholly out of touch with modern thought.

In fact, so up to date is the ruling prince, Franz Joseph II, that he acquired two factories in his kingdom—one making false teeth and another making calculating machines. I regret that the false teeth did not prosper but the calculating machines did well. After all, when there are four thousand registered companies there must be plenty of opportunity for calculating.

However, you must not think that the prince is solely concerned with mundane matters. He and his wife live in a medieval castle with creature comforts as modern as this year's calendar. What is more, they have an art collection which is one of the finest in the world.

Is the prince a dictator? Not at all. Liechtenstein has a parliament of two parties, consisting of five elected deputies from each party. Providing that the MPs always vote according to their whip, there will be a perpetual stalemate that can only be resolved by the prince. In other words, it might be said that in the principality there is democracy under control.

When all this was explained to me I ventured to suggest that their parliament was under the dictatorship of the prince—who, incidentally, is a Hapsburg. His would always be the final decision.

"Oh no," came the reply. "It is the church that decides."

We telephoned our farewells to Paul Gallico but did not ascend to his mountain home again. We said good-bye to the pretty baroness and her handsome husband. Then in the square we turned the nose of the car to the east, for Austria was to be our next invasion.

But even as we waved good-bye and promised to return soon again, a huge bus roared into the square and with a cry that sounded like, "Up guards and at 'em!" a new crowd of British tourists dashed into the store and let loose their pound notes and half crowns in all directions.

"Good-bye," shouted the baroness but the incoming tide bore her out of sight.

No doubt, high up on the mountain, Paul Gallico was cooking his noonday meal; and perhaps the kitten had come over to keep him company.

"Some day I shall return to Liechtenstein," I said to my three ladies.

But they did not hear me. They were studying the map as if the principality had been a mere stop en route.

"I shall return," I said, but the noise of a motor horn from behind drowned the sound of my voice. ★

I Don't Want To Play

CONTINUED FROM PAGE 15

stopped while everyone watched him in a sort of awe as it became apparent that he couldn't remember anything, that he had multiplied six by nine and got one hundred and sixty-three, that he had practically no reflex action, had forgotten the capital of England, couldn't hold celery between his teeth, and turned out to be a poor sport when the hostess started shrieking excitedly, "No. NO! You can't put your shoes on yet. You haven't done it right. You don't pin the celery to the cardboard." He snapped up at her from the floor, "What the devil do you mean? You told me to pin it to the board just half a minute ago," got a crick in his back and let out a military oath that made everyone turn aside in embarrassment. It all revealed that he wasn't a grand old man after all.

In fact he became completely demoralized, and for days after that when we'd be standing out in our gardens, he'd suddenly look at me with a new anxious look in his eyes. It was clear he was thinking of himself instead of deck chairs. He'd say, "I've got a head for figures, you know, but not when people are shouting at me. When they start that, I just want to get into a room by myself. I get rattled. I'd make a poor jet pilot."

This hostess just about made an introvert out of him at the age of seventy-five, and probably would have if he'd gone to any more of her parties. But next time he just asked me, "Make my excuses, will you? Tell that woman I'm tied up in another matter."

But the point is, whenever anyone starts monkeying with human nature they usually cause more trouble than they cure, especially the kind of people who think you can work on the human character from the outside, like a pie crust, molding it into something more desirable for a few hours.

A lot of activities at my kids' Sunday-school class are presided over by a tall, pleasant young minister from New Brunswick who, out of real goodness of heart and a genuine desire to serve, believes that you always have to be doing something brisk about human nature or nobody will have a good time. I really like this man and respect him but I just automatically start hiding behind pillars when he appears.

I was at one of his affairs the other day when, following a picnic lunch, about fifty parents all sat around in a big circle next to the people they wanted to sit next to, talking and enjoying themselves. Then this minister came in, took one look around, saw that nothing was organized and, with the energy of a gym instructor, announced something about us all getting to know one another better. With that, he made everyone stand up, walk to the middle of the floor, tell a lot of people, who didn't care, who he was, what his work was, and where he came from. Everybody nearly died of self-consciousness, and the minister tried to make them feel at ease by making little jokes in a professionally projected voice and laughing heartily. When he got me up there, he caught me on that old one about what hand did I write with and what hand did I stir my tea with; when

I said my right, he said he used a spoon himself and clouted me on the back and left me to grope my way back to my seat.

The thing is, he not only changed the mood of the ones who had been in the middle of the floor—all of whom, after they'd returned to their seats, sat looking unhappily into space—but worried the ones who hadn't been called yet about what he was going to do to them, so that they couldn't pay any attention to what was going on. On top of all this, he made a lot of people forget where they'd been sitting and they found themselves among people they didn't know and who wouldn't talk to them.

One time he told me with a sort of benign grimace, "I like to drag people out of themselves."

With all due respect for his intentions, if a guest is the type who is shy, sensitive and slow-witted, nobody is going to change him by dragging him out of himself; or if they do it's something I'd just as soon not see. I believe in leaving people in themselves. The place for people to come out of themselves is on a psychiatrist's couch.

A good host or hostess, in my opinion, not only doesn't bring guests out of themselves but deftly keeps them stuffed in, so that the only part that's showing is the best part—the part that should go to parties.

Not that all people who plan organized fun are trying for a quick psychological cure. Some just feel that a get-together of any kind is a failure unless everybody knows everybody else, and that the quickest way to bring it about is something that will make them all stand up and move away from the people they like.

What Do You Say to a Pumpkin?

One bright, brown-eyed young hostess I know has been doing this ever since I've known her. As soon as everyone is having a good time she pins strips of paper on them, divides them into two groups so that friends, acquaintances and people who get along well are not together, then puts one group in the dining room and the other in the kitchen. Then, as far as I know, she goes to a late movie, because I never see her again.

I've yet to see one of these games end any way but with a lot of people standing around in different rooms as if they were going through customs, waiting for something to happen. It never does.

It's even worse when the guests are in costume, in some sort of pageant, to which only the hostess has the key. One time she herded seven guys into a sort of den, seated us all on the floor around a pumpkin, and told us in a haunting, tremulous eerie monotone that we were all witches. Then she left us looking at the pumpkin and wondering how long it would be before the party broke up.

Among the witches were a chemical engineer from a tire factory, a commercial artist from Simpson's, an insurance salesman, a Hoffman Press operator, an auditor, a cop (dressed like a grandmother) and a linotype operator—none of whom had met one another until an hour ago and all of whom wished they hadn't even then. Only two guys tried to keep up the spirit of mummery. The Hoffman Press operator, a large man who, I think, was supposed to be a skeleton, gave one eerie

cry and everyone stared at him until he just went back to staring at the pumpkin. But the really shattering sight was the linotype operator who was dressed as a baby, with a bottle and a rattle in one hand and a rubber nipple in his mouth. When he had arrived at the party he had cried and said he wanted more milk and everybody nearly died laughing. But springing this without warning on a large group of people, including a lot of women and several old friends, is one thing, keeping it up an hour later in a room with six strange men, including a cop dressed as a grandmother, is something else again. Every time he burst out crying, the cop scowled from under his lace cap and looked as if he would have liked to get him down at the station for five minutes at evening vespers.

I'd come as an old Rembrandt with a frame around my head. I'm usually tongue-tied at parties anyway, but if you want to see something really subdued you should see me sitting looking through a picture frame at a cop dressed as a grandmother, or even a cop dressed as a cop. On the other side of me was the chemical engineer, a big, handsome, sulky red-faced man who was supposed to be a cavalier.

I've never seen anything less gay than that group. We all sat there looking grimly at the pumpkin, the cavalier flipping little bits of lint off the rug with his rapier, the man dressed as a baby sucking his nipple thoughtfully, and the cop waiting for him to cry "mamma" just once more. It was as funny as a nervous breakdown. The hostess never did come back. We just all began to stand up after a half an hour or so to read book titles or shove our lace bonnets and picture frames back off our heads and say a few words to one another about the weather. We probably would have all been there yet, stark staring mad, if our wives hadn't looked in on us eventually and told us in some surprise that they were serving cake and coffee.

String Ties a Party in Knots

Of all the confused ideas about entertaining, I think the worst is that it's all right to invite anyone to a social affair, with complete disregard of tastes, background, interests, sensitivity, old feuds and delicately balanced relationships, and think that the whole thing will be a success as long as everyone is made to play games. I remember one time in Kitchener watching two principals in a feud chew their way along a string toward one another. A few days earlier they had been threatening to decapitate one another with shovels. For some reason one of them had a theory that he owned the other man's driveway. It had something to do with a survey made by William Lyon Mackenzie. They were always yelling at one another above the sound of the wind, leaves, the roar of their cars and the barking of a beautiful big police dog.

Actually, it should have been a man and his wife at either end of the string, but the hostess got the teams mixed up. These two guys made an agonizing effort to be good sports and pretend there was something human on the other end of the string, but soon they were beginning to reel the string in with their fists, without taking their eyes off one another. They would have probably been scoring the game with loose teeth if a couple of guests hadn't hollered, "Time's up!" and shouldered them apart.

Another thing about party games, from a purely practical point of view, they're not feasible. The essence of the fun in any game is a certain skill which implies a certain knowledge of the

game. But there isn't time in an evening to learn most of the party games I run up against. The idea that somebody can learn a new game, play it, have some coffee and sandwiches and a good time all in one evening, is like expecting someone to spend Saturday afternoon learning algebra. It's even worse the way most people explain games.

I've noticed that people who explain games explain everything but the purpose of the game. A couple of weeks ago I was forced sullenly into a game involving cards, miniature plastic brooms and little wooden disks with numbers on them. For three hours I played without knowing once what I was doing. I don't know yet. I don't want to know either. But the point is, the hostess and her husband both started telling me everything about the game except what I was supposed to do—or, rather, why I was supposed to do it—and told me both at the same time. They not only didn't tell me what I was supposed to do, they told me all the things that would prevent me from doing it and would count against me.

"See," the husband would say, shuffling the cards, "if anybody gets a queen or three jacks before you've got thirteen, you make them take a card from the deck. Then you can pick up any of the cards you discarded, if they say they're going to try for more than twenty-one."

"You'll catch on as soon as you start playing," his wife said, completely disregarding the fact that I didn't want to play. "It's just like bridge, except that if you draw a three you become a lamppost, and you count with brooms and aces."

How to Be a Lamppost

Every time I asked what I was supposed to do, she said, "You try not to be a lamppost. It's loads of fun."

I've been trying not to be a lamppost all my life. I still didn't know how it fitted into this particular game.

"We'll just play a couple of games so that you can get the hang of it," the husband said.

Eight games later they were looking at me with horribly polite little smiles and saying things like, "No, you see, if you're a lamppost you miss a deal."

As far as I could see, the only possible purpose of this game was to end it as quickly as possible, or, better still, never to have started it. The only thing that half saved the situation for me was my partner, a huge woman with a happy face as expressionless as an egg, who not only couldn't understand anything but couldn't hold her cards so that she could read them. She would fan all the cards out to the right instead of the left, so that she had seven blank corners to look at and had to peek behind each card or underneath it as if looking into a hot oven. The only difference was that she didn't use pot holders.

But I'm not criticizing games as games, but as artificial social devices. They don't work any better than any other form of social coercion or methodical taping-out of people's moods and prejudices. It's sometimes hard to figure out people who think they do.

One time I was at a Canadian picnic in Florida, arranged by a local club. The chief organizer, with unerring instinct, sensed immediately that people who liked one another were going to group together and in a flash of genius said that we'd all sit in the order of home provinces. With this one master stroke, he had people from Winnipeg sitting next to people they didn't know or like from Toronto; Argo fans sitting next to people from Ottawa; and New-

foundlanders and Albertans trying in vain to find something in common besides Canada.

People who don't like one another, don't like one another any better just because somebody arranges for them to meet. I stayed one time at a small beach community in Nova Scotia where I met a fussy, friendly, nervous printing salesman who was a born social arranger. He felt that, for a writer, I just wasn't meeting enough people. All I wanted to do was to sit scowling at the gulls and occasionally talking to one little man I met, an old well digger who was full of fascinating stories of the things he thought about while he was below sea level.

But this printing salesman started arranging little soirées with people I didn't want to meet and who wanted to meet me even less. At one informal little get-together he introduced me to a big bald lawyer who looked at me as if waiting for me to make just one wrong move; a sour little member of the town council with ulcers and no use for writers; an Austrian sculptor with a duck-tail haircut and a wife who talked all night about a pregnant cat; a millionaire yachtsman who tried not to be a snob about people without yachts; and a retired librarian who had written several papers on Cromwell's England. The yachtsman thought the Cromwellian scholar was a square; the Cromwellian scholar thought the sculptor was a freak. Both the scholar and the sculptor thought people shouldn't have yachts or a million dollars. I thought nobody should have a wife with a pregnant cat. Nobody liked me. And the lawyer and the councilor got into a fight. Everybody got away as fast as possible to their sculpture, office, yacht and books. I don't know where the Cromwellian scholar went. On the last day, the printing salesman had us all make out little cards with our names and addresses on them and give them to one another. We all tore them up as soon as we got out of sight. At least, I presume the others did too—I've never heard from any of them.

All in all, making someone do something he wouldn't have thought of doing himself doesn't make him enjoy it. Dragging shy people out of their corners doesn't make them any less shy. The way to help shy people out is to leave them alone. Pushing people around, on any scale, is a form of tyranny, even if it's done with the best of intentions by means of hearty social gimmicks. In fact, this kind is the worst kind of tyranny: the kind with moral backing. Anybody who refuses to go along with the convention that you should not only enjoy yourself, but enjoy yourself a certain way, is generally regarded as a poor sport and the kind of guy who kicks dogs in TV plays and gets shown up in his true colors by a cowboy. If you ask me, hostesses who don't like people who don't like games, yet still invite them to their parties and try to make them play, would probably dynamite brook trout, and I give them fair warning that from now on I'm not going to play.

In fact, if it's the kind of party that needs something to break the ice, I'm going to skate right past it and go home. ★

IS YOUR SUBSCRIPTION DUE?

Subscribers receiving notice of the approaching expiration of their subscriptions are reminded of the necessity of sending in their renewal orders promptly. The demand for copies to fill new orders is so great that we cannot guarantee the mailing of even a single issue beyond the period covered by your subscription. To avoid disappointment, your renewal order should be mailed to us promptly when you receive the "expiration" notice.

The roar of an aircraft engine during ground test can rattle windows and nerves for blocks around. So we're glad to report that aluminum has turned up as a noise-absorbing "honeycomb" in an aircraft company's test-cell. Hundreds of aluminum tubes of differing diameters and lengths, filled with absorbent, sound-baffling material, make up the end walls. And we are told that by the time the giant roar has bounced around in these aluminum mazes it comes out the other end thoroughly "baffled" and weakened to a hum. We expect there are lots of aluminum boosters around that factory!

CONTINUED FROM PAGE 13

have been echoing and re-echoing their discouraging plaint across all the days of my years: rootless . . . no distinctive Canadian literature . . . rootless . . . rootless. The wail is in tremulous harmony with the strange noises made by some politicians who claim we can't be a nation until we carve the Union Jack out of the flag.

Canadian literature rootless? What language do we speak—Esperanto? And what are we—goat-herding Kikuyu? I for one am gratefully happy with the roots of our literature which, among others, are Milton, Chaucer, Shakespeare and Donne. Furthermore, I do not fully comprehend what is meant by "a distinctive Canadian literature." If enough Canadians apply their Canadian minds to the world around them, and the seats of their Canadian pants to the seats of their Canadian chairs, we can have a burgeoning Canadian literature.

Indeed, we have a pretty good flowering of Canadian literature right now. Try to bemoan the state of Canadian writing in any literary gathering in New York or London or Paris and you will be challenged with a flood of names: Robertson Davies, Morley Callaghan, Hugh MacLennan, Thomas Costain (who lives in the U. S. but is widely regarded as vigorously Canadian), Mazo de la Roche, Lawrence Earl, Gwethalyn Graham, Roger Lemelin and half a dozen other Canadians writing in the French language. These are writers of various types and schools, and readers will differ violently on their merit or lack of merit, but bundle them up and they are a formidable lot. My point is that only in Canada is Canadian writing derided, decried and indeed dismissed as nonexistent.

Perhaps the principal area of dispute lies in the question: what is a Canadian novel? That is a blood brother to the question: what is a distinctive Canadian literature?

There is a group of people, based mostly in Toronto with tentacles reaching deep into radio, television, publishing and the book pages of principal newspapers, that I like to call the Inner Coterie of Canadian Authors. Many of these self-appointed arbiters of Canadian culture are connected with the Canadian Authors Association, whatever that is.

This group would seem to believe that a Canadian novel must restrict itself to Canadian characters, locales, situations and problems. My own definition of a Canadian novel is one written by a Canadian, or more exactly, one written by a product of Canadian education and upbringing.

I have scant sympathy with the provincialism that holds that a novel must be about a hut in northern Saskatchewan or incest in the Maritimes or the clash of our two great cultures to qualify as Canadian literature. This is the essence of timidity, the root of a terrible inferiority complex. One might as well dismiss Julius Caesar and Romeo and Juliet as Italian plays, and For Whom The Bell Tolls as a Spanish novel. Are our newspapers less Canadian because they print a preponderance of world news on their front pages and deal with world problems on their editorial pages? Is Mike Pearson less Canadian because he doesn't restrict his speeches to wheat, the St. Lawrence Seaway and Canada's air space? Is a writer less Canadian be-

cause he refuses to believe that British and American novelists have a monopoly on universal problems and big canvases? And best sellers? And, Heaven forbid, enough popularity to attract offers from Hollywood?

Just as there is a distinctive Canadian policy on the world stage of foreign affairs and a distinctive Canadian position in the world of finance and commerce, there can be, I believe, a distinctive Canadian niche in English-language literature. The three novels I have written, though they deal mostly with non-Canadians, could not easily have been written by anyone except a Canadian. All three books deal with the impact upon Britain and Europe of a great and historic development: the uneasy accession of the United States to world leadership and responsibility. Who can look at all sides of this momentous event better, more compassionately than a Canadian? Who else in the world has a more immediate comprehension of, and intimacy with, both sides of the Atlantic? This, in my view, is a clear and unchallenged Canadian literary function, even though the characters in the three books are mostly Americans, British and west Europeans.

A man writes what he knows best and feels deepest. I happen to have been a foreign correspondent most of my adult life. Does this make me or my books less Canadian? John P. Marquand remarks in his review of *The Sixth of June*, my most recent novel, "For once the English and the Americans in a wartime novel are equally convincing." This is a Canadian literary function.

Of course I would like to see great powerful novels written by Canadians about our own country, her problems and her folklore, displayed in book-stalls all over the world. I am sure this generation will see Canadian Joyce Carys and Canadian Robert Penn Warrens emerge. But let's not insist on putting the cart before the horse. First we must expand our cadre of crack professionals. We must encourage Canadian novelists to get out on the world stage. We must convince them that they are not condemned to garrets and to the whims of the Inner Coterie of Canadian Authors, that they have both roots and opportunity, that the psychological handicaps can be blown asunder with a single deep breath of courage.

At this point I must become even more personal than I have been heretofore, simply because my most expert witnesses on the subject are pages out of my own experience.

In early 1944 I was in England, awaiting the assignment to D-day. I decided to spend the time writing a book, my first. The title chosen was *They Left The Back Door Open*, because it was a report on the conquest of Sicily and the storming of the Bay of Salerno by the U. S. - British Fifth Army. The manuscript was completed in March of that year and I mailed it to a major Canadian publishing house in Toronto.

No one except a writer can know the excitement bound up in sending his or her first book to a publisher. It is heaven and hell, dreams and feverish torture. Especially torture, and especially the waiting, waiting, waiting. As it turned out, I didn't have to wait too long. One fine spring day the millennium arrived in the form of a cable from the editor-in-chief of the publishing house: "... Splendid ... accepted ... publishing quickly as possible." Glory be!

One deliriously happy month later a letter arrived from the same publishing house. It was a most sympathetic letter. They were deeply sorry

to disappoint me but, it turned out, they had decided to publish a major American author's report on the Mediterranean campaign and, as the subject matter was more or less similar, well ... crash!

Only a writer can measure the disappointment, and only I can know how valuable a lesson I learned from it. My London bureau manager, a grand Englishman who was never caught without an umbrella, bundled up a carbon copy of my manuscript, sent it to a major British publishing house. One week later, the publisher took me to lunch, told me it was the finest book he had read on the Mediterranean campaign and handed me a cheque for the British equivalent of four hundred dollars as an advance royalty. The fact that another Canadian publishing house subsequently accepted the manuscript couldn't erase that first disappointment nor could it obscure that first lesson: if you think you're as good a writer as the next man, get out into the world, lad, out into the world. Canada will eventually come charging up from the rear.

The Inner Coterie Sniffed

Small wonder then that when I returned from the war in 1946 with a burning ambition to write a first novel, I offered my first two chapters and a story outline to LeBaron Barker, Doubleday's executive editor in New York. He was blissfully ignorant of the fiction that Canadian writing is rootless and he promptly produced a contract and a substantial advance royalty cheque. The novel turned out to be *The Sealed Verdict*. It sold about twenty-five thousand hard-cover copies in the United States, Canada and Britain, over one hundred and fifty thousand book-club copies, some six hundred thousand paperbacks, was translated for publication in France, Denmark, Italy, Spain and Norway, was made into a movie by Paramount, serialized by *Cosmopolitan* magazine and attracted a wealth of superlative reviews all over the world. The *Saturday Review of Literature* listed my name at the top of their gallery of the best first novelists of 1947.

Had I made the grade in my own country? Not by a long shot. The Inner Coterie of Canadian Authors, based mostly in Toronto, sniffed like a constipated owl. Wrote the critic of the *Toronto Globe and Mail*:

"This is a sideline view of Allied Military Government in action in which the author theatrically stacks the cards with all the ornateness of a soap opera and melodramatically telegraphs the outcome. The six chapters of *Sealed Verdict* are labeled in the prescribed Monday through Saturday formula of radio's washboard weepers. However, *Sealed Verdict* has already been purchased by Paramount Pictures, serialized in *Cosmopolitan* and will undoubtedly be a lending library success ..."

Well, the years roll on. I write a second novel, *Torch For a Dark Journey*, which has a fine critical reception in the U. S. and Europe but is largely ignored in Canada. And now a third novel, *The Sixth of June*, pops out of the typewriter. It seems sure of success with the public and critics alike. It is the August selection of the Book-of-the-Month Club, an immediate best seller from Gander to California. The movies have bought it (how low!) and foreign publishers are outbidding one another crazily. And all the time I kept wondering: did I make the grade in Canada?

It seems I not only made the grade but am suddenly too bloody good. A

curious strain ran through the principal reviews: "If there be fault here," writes the *Globe and Mail*, "it may be resentment in a few minds that the novel is too slick, too well plotted, too credible, too ably and smoothly controlled..." The *Montreal Star* wrote: "It is not Shapiro's fault that his novels have such surface gloss and appear to be written with so shrewd an eye on the market that one tends to dismiss them as all surface. They are better than that: the craftsmanship is sure..."

In 1952 I wrote a drama for the stage; again I had an experience that may prove of some value to Canadian dramatists who feel they must make good locally before moving out on the world stage. The play, *The Bridge*, was selected for production by the famed Old Vic Company of Bristol, England. Its critical reception by England's first-string critics was widely reported in Canada. The *Manchester Guardian* wrote the morning after a wonderful first night: "Henry Sherek has found a new dramatist and the Bristol Old Vic Company presented his first play tonight at the Theatre Royal—*The Bridge* by Lionel Shapiro. There has not been as good a theatrical examination since Sartre's *Les Mains Sales* of the conflict between personal and political loyalties in a world divided by beliefs hardened into hatreds... Mr. Shapiro is a fortunate beginner. He seems to have no trouble with construction, every scene ending with a theatrical crackle. He not only deserved success tonight but had it thrust upon him by the excellence of the Bristol Old Vic players."

A few weeks later I flew into London and consulted my agent. The news was good. Amsterdam and Copenhagen had purchased the play for production. Offers were flowing in from England's famed repertory companies. "Anything from Canada?" I asked. The answer was no, not even an inquiry.

Let's turn to television which is both a wonderful market and experience for the developing writer. In early 1952 I did my first TV script, an hour-long drama called *The Twenty-Third Mission*. It was immediately accepted by NBC's Television Playhouse and scored so well that the CBC was finally cajoled into buying a year's option for Canadian production. The following year I had the pleasure of seeing it done in London by BBC's superb television company and the critical reaction was far beyond my rosiest expectations. The *Daily Express* critic called it "one of the neatest and most touching short plays of the season." The *Sunday Times* was extravagant indeed. Its critic, Maurice Wiggan, wrote: "It may seem farfetched to call a television producer a poet, but the best of them do a poet's work. To be simply a technician is manifestly not enough. There are about half a dozen men who deploy both technical skill and creative imagination: when they collaborate with good writers, they make possible a stay against confusion. Most of them work in the drama department. Lionel Shapiro is a good writer, and a writer who believes in goodness which is much less common and much more important... *The Twenty-Third Mission* was written especially for Armistice Day, a rash and even reckless venture, which succeeded, so far as I was concerned, perfectly..."

The point of this story is that, a year later, when I arrived back in Canada, a CBC executive explained to me in a plaintive voice that the play had not been televised because no CBC producer cared for it sufficiently. There apparently is a grand panjandrum of drama in the CBC who was enjoying a purple mood that season and spe-

cialized in the bizarre, the supernatural, and lecherous Orientals. I concede him the right to like whatever he pleases but he must concede me the point that when one man controls TV playwriting in Canada it accentuates a terrible weakness in the system of government-owned TV.

This bleak and angry chronicle rises not out of a spirit of recrimination but in pursuit of high purpose. I have no need for mumbling over past disappointments for I am not blind to the fact that I am probably the luckiest three-novel writer alive—lucky in the

terrible game of jackpot lottery which every writer must play in this day of high pressure and mass media, lucky in the tangle of circumstances that sent me abroad at a time when I was young enough to shake off the sense of timidity which paralyzes the creative arts in Canada.

The purpose of this article is to emphasize that the most important thing in the life of a writer is what happens in those quiet contemplative hours when he or she is alone with a typewriter and a blank sheet of paper. It doesn't matter whether the writer

is sitting in New York or Tunbridge Wells or Regina; what does matter is the magic of creation and this flows from the trifling of God that is in all of us.

In all of my journeyings into the far corners of the earth I have yet to meet a person who doesn't think it is a grand thing to have been born and brought up a Canadian. There is no reason why this shouldn't apply to Canadians who work in the creative fields. Sometimes pride can be a form of courage and too much modesty only a form of cowardice. ★

Canadian Schenley O.F.C. AGED 8 YEARS CANADIAN WHISKY

**THE ONLY CERTIFIED 8-YEAR-OLD
CANADIAN WHISKY ON THE MARKET**

A distillers' age declaration, stating the time the whisky has been stored in small wood casks... and only such an age declaration... is your guarantee of the true age of a whisky.

The numbered, signed certificate on the back of every bottle of Canadian Schenley O.F.C. is just such an age declaration... authentic proof that O.F.C. has been properly aged in small oak casks for 8 full years.

CONTINUED FROM PAGE 21

and some of Grey's friends. The only other Canadian at table was John A. Macdonald, but for a change that bottle-nosed fascinator didn't captivate the company. Ryerson so outshone Canada's future prime minister that Lord Grey, writing about the dinner afterward, described him as "a very superior man" and didn't mention Macdonald at all.

Ryerson took great pleasure in his acquaintance with members of the English nobility. They were seldom so tactless as to remind him that non-conformists, meaning any Protestants who didn't belong to the Church of England, were pretty undistinguished from the point of view of high society. In theory Ryerson didn't mind the low social standing that went with being a Methodist, but in practice he minded it considerably. Once, when he was telling a noble friend about a preacher named Peter Jones who had invented a syllabic alphabet in which the Bible could be printed in Mohawk, His Lordship said it was a splendid thing to have done and expressed surprise that he'd never heard of the gifted Jones. Ryerson suggested with a touch of bitterness that this was probably because Jones was "only a Methodist," and was hurt when the nobleman agreed with him.

There was little grace and less charm in those early times in Upper Canada. What is now wealthy Ontario was then a poor place in more senses than one. The few hundred thousand inhabitants were chiefly country folk who had to work backbreakingly hard to make a living. Toronto was a dirty little town which could only be considered a city on the technical grounds that from 1834 onward it called itself one. Such roads as there were became quagmires of mud in rainy weather and choked travelers with clouds of dust when it was dry. The inns, almost without exception, were veritable pigsties in which people often had to sleep three and four to a bed unless they chose the relative privacy of sleeping alone on the filthy floor. Besides Toronto the principal towns were Cobourg, seventy miles to the east on the main road to Montreal and Lower Canada, and Kingston. Cobourg and Kingston were prettier than Toronto but they were also even smaller and had fewer diversions. (Toronto, with a population of less than ten thousand, had one theatre but a hundred pubs.) Industry hardly existed, and the already over-worked pioneers had to make most of the things they needed, from clothes to furniture. Not many Upper Canadians, new or old, were well enough educated to lead an intellectual life.

Ryerson, who was to do so much to bring light to this mental wilderness, was born in the spring of 1803 on a farm near what is now the village of Vittoria, not far inland from Lake Erie in Norfolk County. His father was a New Jersey man who had fought on the British side in the American Revolution and had come to Canada in 1799. When Ryerson was born his father was a half-pay pensioner farming a six-hundred-acre land grant. He had been made a colonel of militia, lived in a house with sixteen windows and a pillared front porch, and turned purple at the slightest provocation.

Ryerson's mother was a devout Anglican—unlike the Colonel, who simply considered it his duty as a

gentleman to belong to the Church of England, just as it was his duty to honor the King and keep the lower classes in their place. The Colonel hated and feared the possibility that democratic ideas might spread north from the United States, and was particularly suspicious of Methodism, which in those days in Canada was largely under American influence. Methodists were as a rule persons of the lower class (the age of wealthy ones like the Eatons and the Masseys was yet to come). They held the subversive idea that all men were created equal. Consequently when Ryerson came to his father one day in 1821 and said he was going to join them, the Colonel felt pretty much as a modern father would feel on being told his son was about to become a card-carrying Communist. In language as purple as his face he said the boy would have to choose between Methodism and continuing to live in his parents' house.

The morning after his father's stern edict Ryerson left home and went to be a student teacher at the district grammar school. Two years later he came back at the request of his father, who needed help on the farm and thriftily forgave him rather than pay a hired man. When Ryerson was twenty-one he left home again, this time for good, to study law in Hamilton. Within six months he worked himself into an attack of brain fever and vowed that if he recovered he would enter the Methodist ministry.

Preaching by Candlelight

He preached his first sermon on Easter Sunday in 1825, at Beamsville on the Niagara peninsula. The congregation weren't much impressed by it, but they found his appearance rather striking—as well they might, to judge from this description by one of them: "He was then perhaps twenty years of age, fat and boyish-looking . . . Rather over than under the medium size—well proportioned—fair complexioned—with large speaking blue eyes—large nose . . . and then such a head! Large, full, well balanced, without any noticeable prominences; but embossed all over like a shield."

After Easter he settled down to the grind of circuit riding in southern Ontario. Churches were few in Upper Canada in the 1820s, and circuit riders were traveling preachers who followed a laid-down route and held services wherever people gathered to hear them. Many years later an old woman told a friend she remembered young Ryerson preaching "in an out-of-the-way neighborhood in the township of Louth near the Twenty Mile Creek, in a little dirty schoolhouse illuminated by one single tallow candle near the preacher's person, upheld by being pinned to the wall with a pen-knife." Ryerson loathed the squalor of these meeting places, and the equally squalid farmhouses where he had to stay overnight. Yet soon after he became a preacher, when the Church of England offered him a good living because it was thought he'd make a useful convert, he refused and kept on riding circuit.

By the spring of 1826 it had become most unlikely that Ryerson would ever get such an offer again. Methodists and Anglicans got along harmoniously in England, but in Canada it was very different. That spring John Strachan, the Archdeacon of York (it hadn't yet been renamed Toronto), preached a sermon in which he called Canadian Methodist ministers ignorant, self-important and disloyal, and said they were mostly Americans anyway. Ryerson wrote a twelve-thousand-word counterattack, which he called a review of Strachan's sermon, signed it

"A Methodist Preacher," and sent it to William Lyon Mackenzie's weekly paper, the *Colonial Advocate*. Mackenzie's main editorial aim was to get rid of the Family Compact—a clique of Tories who had a barnacle-like grip on the government of Upper Canada and were determined to cling to power as long as possible. Since the Church of England was a strong supporter of established authority the Tories wanted the Anglican faith declared by law the state religion of Canada. Ryerson's attack on Strachan was thus an indirect attack on the Family Compact, and

Mackenzie printed the whole twelve thousand words.

The effect was sensational. Religious controversy, preferably heated and full of Christian insults, was among the few pleasures of those early times in Canada, and this was the hottest controversy the country had ever known. Anglicans were furiously indignant. Methodists were delighted, and showed it in outbursts of emotion like the reaction of the Reverend Anson Green and a friend when they got their copy of the *Advocate*. "We went into the field in the rear of the parsonage,"

Green wrote, "sat down by the fence and read the review. As we read we wept, and speculated about the unknown author."

Ryerson's father also speculated about the author of the review, and soon began to suspect from certain rumors he heard that it was his son. He sent for him to come home, took him out to the orchard, and asked him point-blank if he'd written it. When Ryerson admitted he had, the old Colonel threw up his hands and cried in a hollow voice, "My God, we are all ruined!"

Lamb Tonight?

Is lamb the pièce de résistance you have planned for dinner this evening?

Then listen to this: nothing starts a dinner on quite the same delightful note as a glass of Canada's most popular sherry wine—"74" Sherry. Have some sherry before your meal—or, if you like, sip it with the soup course to start the meal. It's the ideal appetizer wine that everybody enjoys.

And at any time, too! There's no better drink for entertaining—there's no mixing or measuring when you serve "74" Sherry. Just pour it right from the bottle at room temperature—then serve with pride the sherry your guests will drink with pleasure.

*Did you know that a glass of chilled Manor St. David's white table wine lends magic to lamb or any other white meat?

JASPER

By Simpkins

MACLEAN'S

They weren't. None of the family suffered anything worse than a few snubs. Ryerson himself spent the next couple of years as a missionary among some singularly dirty Indians on the Credit River near Toronto, but the Methodist elders had marked him for advancement. In 1829 they decided to have a weekly paper of their own, to spread the faith and counter the propaganda of Tory weeklies. It was called the *Christian Guardian*, and Ryerson was chosen to be its first editor at a yearly salary of six hundred dollars—appreciably more than he'd been paid as a missionary.

It was a welcome raise, because in 1828 he'd married pretty Hannah Aikman, whom he met when he was studying law in Hamilton. (He had been attracted by another girl from the country just outside Hamilton, but hadn't been able to overcome his distaste for her habit of going barefoot.)

Ryerson saw to it that the *Guardian* had plenty of pious exhortations, Sunday-school lessons and other godly material. But he also printed news stories about murders, burglaries and the abduction of innocent young girls. There were notes on the latest fashions in bonnets. Readers could learn how to remove grease stains, carry a hive of bees without getting stung, cure themselves of stammering, and brew fine beer at home. In those days Methodists were allowed to drink beer if they wanted to but were forbidden hard liquor, and the home-brewing instructions were most popular.

The result was that in the first two years the *Guardian's* circulation climbed from four hundred and fifty a week to three thousand—a big lead over any other Canadian paper. Soon the *Guardian* had a flourishing advertising section.

Besides editing the paper, Ryerson organized and ran a distributing centre for Methodist books imported from New York. Later the centre did its own printing and became Canada's first book-publishing house. It is now operated by the United Church and is both the oldest and largest entirely Canadian publishing firm. Its trademark is a small shield with a drawing of Ryerson's head. He looks like a

faintly girlish young actor made up as Samuel Pickwick, and seems happy to be a publisher. He wasn't. The work of the book centre didn't appeal to him, and he started it only under orders from presiding elders.

In 1833 they sent him to England on church business. Among other things he was supposed to raise money for building a Methodist academy in Canada. He also had to lobby at the colonial office against the Family Compact, which was still trying to make Anglicanism the state religion. His fund-raising was poor and he got little more than a hundred pounds, but colonial office people were much impressed by his plump self-confidence and obvious ability.

He Called the Tories Tyrants

If he impressed them, they impressed him. These super-squires wore their clothes with such an air and were so blandly reasonable. The Methodist doctrine that Jack's as good as his master began to appear a trifle unrealistic, and when he got home he wrote a *Guardian* article to say he now believed the moderate Tories of England had the right political idea.

This was badly received. The few readers who agreed with his new views thought he shouldn't have written about them in a religious paper. The majority were outraged because they thought he was implying that Methodists as a whole had been won over too, when in fact they were as anti-Tory as ever. Canadian Tories, by no means moderate, didn't like him calling them lordlings in power, tyrants in politics and bigots in religion. William Lyon Mackenzie, who had hitherto counted Ryerson an unshakeable brother radical, dashed off an editorial comparing him to Benedict Arnold—the traitor of the American Revolution.

Ryerson flatly refused to budge from his unpopular stand and in 1835 he resigned from the *Guardian*.

It was a distressing time for him. His pretty young wife had died in 1832, leaving him with two small children. In 1833 he had married again, noting in his diary that he'd married only after "many earnest prayers . . . and the

advice of an elder brother," which hardly suggests a love match.

Saddened by his troubles, Ryerson turned from editing to preaching and took over a church in Kingston. No sooner had he settled there than he was sent to England again. The plan to have a Methodist academy in Canada had run into difficulties, mainly from lack of money. Ryerson was told to ask the colonial office to authorize the government of Upper Canada to grant financial help and issue a charter. A year and a half later he came home, having got what he went for. The academy had already been built, at Cobourg on the Kingston-Toronto road, and in June 1836 it was possible to start teaching at last.

Ryerson returned to Kingston to preach, but wasn't left undisturbed for long. In 1838 he was again made editor of the *Guardian*, which now had to snipe at fellow-Methodists who had seceded from the Wesleyans and formed sects of their own, as well as at the Family Compact. Certain Tory editors at once sniped back by accusing Ryerson of disloyalty. There was absolutely no truth in the accusation, but in the witch hunt that had followed the Mackenzie and Papineau rebellions of 1837 it was as nasty a smear as a charge of communism would be today. Ryerson defended himself so violently the presiding elders ordered him to tone down. He didn't like that, and in 1840, when he found he couldn't endure any more interference, he resigned from the *Guardian*.

In the fall of 1841 he was appointed principal of the Methodist academy which by then was Victoria College. Although he'd had little formal education and even less teaching experience he had definite ideas about how the place should be run. So far it had been co-educational. He didn't approve, and sent the girls away. He didn't approve of vacations either, and announced that in future the college year would be twelve months, with no holidays except on Christmas and New Year's Day. He recommended starting work at five in the morning, two and a half hours before the official beginning of classes. The students didn't revolt. On the contrary, they took a liking to him. Since he was a born administrator and had laid out a good curriculum, all was well—until Ryerson suddenly changed his political position again.

Under the governor-generalship of Lord Sydenham, a liberal-minded man, Ryerson's moderate Toryism was quite in order. But in 1843, after Sydenham's death, Sir Charles Metcalfe was appointed governor-general. In Sir Charles' view, Canadians were a great deal less deferential than they should be. The advisory council of the legislative assembly resigned because he wouldn't take their advice on a couple of minor points. He wasn't bound to do so, but the touchiness of the council struck him as showing an alarming spirit of independence. Their resignation meant calling a general election. Metcalfe, clearly a most immoderate Tory, hoped the new assembly would have the decency to remember they were only Canadians and leave him to govern the country.

With the election campaign coming up, Ryerson rushed to offer this semi-benevolent despot his full support. When word of what he'd done reached Victoria College the student body split into pro-Ryersons and anti-Ryersons, and there were a few fist fights. Late one night a more serious fight broke out (one boy had his skull fractured) between some students and a gang of young townsmen at the college gate. The significance of these incidents wasn't lost on Ryerson. His conversion to immoderate Toryism was being

Gloss, also in C-I-L Speed-Easy Satin.

168 tempting colors to make your rooms glow with beauty and new interest. C-I-L STYLIST Colors are the result of national color surveys and have been approved by leading color consultants and interior decorators.

For every painting need—indoors and out—
see your C-I-L PAINT DEALER

Tune in to C-I-L "Singing Stars of Tomorrow", Sundays, Dominion Network.

EASY as CILTONE is to use, you'll get better results if you follow a few simple rules which apply to any painting job. First, walls, ceiling and woodwork should be clean and dry—free from grease, grime and dust. No paint—not even CILTONE—can give satisfactory results if the surface is at all damp and greasy.

Wash off dirt and grease thoroughly with a strong solution of any good cleaning powder. A cellulose sponge does an excellent job on smooth surfaces, but a soft brush is better on

rough walls. Wash the ceiling first, then the walls and finally the woodwork. If there is any dirt in baseboard corners and around door and window frames, scrape it away with a putty knife.

If the room was painted previously, scrape off any blisters or loose scale and, if necessary, sand these spots with fine sandpaper to get a smooth, even surface. You don't want plaster cracks, gouges and the like marring the new painted surface, so take enough time to fill them up before you start painting. Small cracks are easily filled with

what painters call "spackling" compound, but for larger cracks use patching plaster (you can get them both from your C-I-L Paint Dealer). Before using the patching plaster, wet the edges of the crack with water and sand the surface smoothly with fine sandpaper after the plaster dries.

CILTONE can be applied with either brush or roller, but most people find a roller faster and smoother than brushing. However, if you prefer a brush, the 4-inch size is about right for walls and ceilings, and a 2-inch brush for sash and door work.

KITCHENER, ONTARIO

CHANEL

even less well received than his switch to the moderate kind had been.

At the start of the campaign the great majority of the voters appeared to be against the respectful stooges Metcalfe favored as candidates. Half-way through it, rumors circulated that Metcalfe and Ryerson had made a deal. They had. If the election went as Metcalfe hoped Ryerson was to be made superintendent of education for what is now Ontario. If it didn't the deal was off.

To counteract the rumors Ryerson issued a dignified statement. "Mr. Ryerson," it said, "has not thought proper, under present circumstances, to accept the office of superintendent of education." This was the literal truth, arranged to give the false impression that Ryerson's support of Metcalfe was disinterested. The impression reassured many voters and Metcalfe's men won the election.

One condition of the deal with Metcalfe had been that before Ryerson took over as superintendent he was to have a year's travel in Europe to study systems of education. About a week after the election he set out on his tour. It began in Holland, and he kept a terse record of it in his diary. "No monitors," he wrote of a Dutch school. "Admirable construction of the seats; excellent order of the children; rod never used—shame the chief instrument of correction." In Paris he went one Sunday to the garden of the Tuileries palace: "A paradise of a place . . . fountains; fish; statues; amusements; but, alas! what profanation of the Sabbath!"

Home in Canada again, Ryerson wrote a report blueprinting a school system for Ontario. Until then the few common schools had taught little more than the three Rs, and the even fewer grammar schools had concentrated on Latin and Greek. The teachers had been paid an average of forty dollars a year, so it wasn't surprising that a survey made in 1831 by a man named Duncombe described them as on the whole "transient persons or common idlers" and said they were often "vulgar, low-bred, vicious and intemperate." Ryerson recommended that in future teachers should be trained in a special school, and that the pupils should have lessons in grammar, geography, music and drawing besides the three Rs. He further recommended the study of chemistry, mechanics, agriculture, civics, bookkeeping and physiology. The report ended by urging that "no Constitutional Government establish and render effective a system of Public Instruction without the co-operation of the people themselves."

Since this was exactly the opposite of Metcalfe's principles of government, Ryerson had made another sudden political turn. The latest swerve had landed him back where he belonged by nature—slightly to the right of the middle of the road, and he soon showed he meant to stay there no matter how many brickbats were thrown at him.

In 1846 the editor of the Cobourg Christian Advocate had shocking news about Ryerson. (Ryerson was still nominally the principal of Victoria College, a title he held for many years, and the editor didn't like him.) "I am informed by a person from Toronto," the editor wrote, "that his children are attending A DANCING SCHOOL!!!" The editor added that when Ryerson was up before the Methodist conference to explain this ungodly lapse, he "contended that it was essential to health," and that he "actually spoke of giving up preaching, rather than restrain his children from DANCING!!!"

Two years later the Christian Mes-

senger printed a solemn warning to its readers. "Remember," it said, "that Mr. Ryerson . . . sends his own daughter, at a tender age, to a Roman Catholic Nunnery, where the Bible is never taught." What he had in fact done was send his daughter to a convent school, where he thought the child would get particularly good training in modesty and polite manners.

His colleagues were outraged, but Ryerson went his own way regardless and worked with prodigious energy. Building up the Ontario school system would have been a full-time job for most men, but not for Ryerson. He was constantly up to his neck in some religious or political controversy, carried on by letters written between half-past four in the morning, when he got up, and half-past eight, when he had breakfast. He made several tours of Europe and spent ten hours a day buying pictures and sculpture for the schools and going to lectures. He was sent to England again and again on Methodist business, generally connected with the battle to keep the Church of England from getting too rich and powerful in Canada.

The Brains of the Compact

The chief Anglican champion was John Strachan, by now Bishop of Toronto. Ryerson had met him for the first time in 1842 on a journey from Toronto to Kingston. In an article written for the Christian Guardian Ryerson said later the coach was so crowded his legs "were locked in with His Lordship's," but that he hadn't minded the enforced intimacy because he couldn't wish to meet "a more affable, agreeable man." Strachan was a Presbyterian turned Anglican, Ryerson an Anglican turned Methodist. Both were gifted businessmen. Neither

Use these **GOOD** **SHORT-CUTS** to save time and work

When you're through enameling woodwork or furniture, fill an empty, clean nail-polish bottle with some of the left-over paint. The small-size brush is perfect for touching up small scratches and chips that may later appear—and you'll have the matching paint handy to do the job.

Good footing for baby: The smooth, slippery leather soles on brand-new shoes can be quite a problem for small children. But if you'll take a piece of Coarse Flint Paper by CARBORUNDUM and "rough up" the soles first, there'll be less danger of nasty slips and falls.

Shorten bolts the easy way, when they're too long for the job at hand. Simply tighten the nut to the place you want it, then grind away the extra length of bolt beyond the nut with a few passes of your grinding wheel. The threads are not destroyed—as they would be if cut with a hacksaw—and when the nut is removed it will go on again easily and smoothly.

Every home handyman needs a good all-purpose grinding wheel. CARBORUNDUM's home grinding wheels are most popular because they're moderate in price and tops in quality. They're made from long-lasting aluminum oxide abrasive grain . . . come in a range of sizes and gradings to fit every home workshop grinder. Look for the display of Grinding Wheels by CARBORUNDUM next time you're in your hardware or building supply dealer's store.

What good short-cut ideas have you discovered that other folks could use to save time and work? Send 'em to me—each idea on a separate postcard—and for each one I can use in later columns I'll pay you \$5.00 right away. Even if I can't use 'em (on account of duplicates and such), I'll send you a handy little gift for your trouble. **Better send a postcard** anyhow, and ask for a copy of a fine little booklet called "HOW TO SAND" put out by the CARBORUNDUM folks. It's FREE . . . just address your card to me . . .

"Handy" SANDY, Jr.

was conspicuously gentle and unworldly. With so much in common they felt mutual liking and respect, only slightly dampened by mutual distrust.

For this there was considerable justification. Strachan was one of the shrewdest politicians in the country, and had been the brains of the Family Compact. Ryerson, equally shrewd, was perhaps rather more devious. In 1850, when Lord Elgin was governor-general, Ryerson went to England in the pious hope of undermining Strachan's influence at the colonial office. Elgin gave him a letter of introduction to the colonial secretary, Lord Grey. The letter was unsealed, and described him among other flattering things as "a gentleman of great intelligence." But in a private dispatch that went by the same ship Elgin warned Grey that "he is accused by many of being somewhat cunning, which is not altogether improbable."

In 1856 Ryerson was accused by many of something worse than cunning. At that time he kept some school funds on deposit with the Bank of Upper Canada, credited to him as superintendent. The bank didn't pay interest to the government on deposits of public money, but did pay it to the official in whose name they were made. Ryerson had been getting three percent for several years, and by 1856 it amounted to about three thousand dollars. That year John Langton, the new provincial auditor, ordered Ryerson to return the money. When this leaked out there was a widespread belief that he'd been caught stealing.

Ryerson repaid the money. But at the height of the scandal he had an unnerving and faintly grotesque experience of what it was like to be under a cloud. He went one night to a Methodist camp meeting, where the faithful sang and prayed in the open

air. He arrived at a moment of silence and everyone stared hard. To ease the awkwardness the preacher called for a hymn to be sung, giving the first number that came into his head. Unfortunately it was a wrong number, and Ryerson was greeted by these tactless words:

"The dying thief rejoiced to see
The fountains in his day;
And there may I though vile as he,
Wash all my sins away."

At the beginning of the trouble Langton had written to his brother saying he wouldn't be surprised if Ryerson came out of it with flying colors. He was right. Ryerson was able to explain that his arrangement with the Bank of Upper Canada was entirely legitimate and in accordance with that bank's normal practice. He paid back the money Langton had asked for, and the interest on it as well, however. Then he demanded and got a retroactive raise in salary, some expense money that had been disallowed and he wound up four hundred dollars richer than he would have been if he'd kept the interest.

He got to be distinctly popular and strengthened his already great influence among rural Methodist ministers by his readiness to preach guest sermons on request. This popularity was unexpectedly useful to him in his running fight to keep the University of Toronto free of what he considered Anglican domination. In the early 1860s John A. Macdonald, who had an election coming up and was well aware of how Ryerson stood with his country brethren, made him an offer. John A. said that of course Ryerson couldn't properly do any actual campaigning for him, but that he might perhaps suggest to the rural preachers the desirability of supporting Macdonald's candidates. If he felt able to do that Macdonald, then prime minister of pre-Confederation Canada, would see that certain key appointments to the university would be given to men Ryerson approved.

Ryerson did feel able to lend his influence on those terms, and Macdonald's candidates won. John A. then kept his promise—with one exception. That was the appointment of a man named Buchan to be bursar. Ryerson knew Buchan was opposed to all he stood for and his letter of reproach to Macdonald was like the outraged bellow of an elephant sinking into a quicksand he had taken for solid ground.

In 1876 he retired from the Ontario department of education. The provincial government paid him many compliments on the way he had built it up from scratch into one of the best elementary school systems in the world, but wasn't prepared to go on paying him his full salary in retirement. To nobody's astonishment except the government's, Ryerson soon managed to persuade them it was the least they could do, and left for England to achieve his crowning ambition. With the immense resources of the British Museum library to draw on, he began to write a history of the Loyalists in America.

The book appeared in 1880. It was politely reviewed in the press, and Ryerson was happy in the belief that he had now made his literary mark.

In that belief he died in Toronto in the winter of 1882. It was characteristic that death took him by surprise. A lesser man would have realized after the last lingering weeks of pain and weakness that his end was near. Ryerson didn't. Full of confidence to the moment his heart finally stopped, he had no intention of being bested by the Grim Reaper. ★

Sunbeam

STEAM or DRY IRON

**New Lighter Weight, Faster Heating,
Most Efficient Steam Iron**

THUMB-TIP CONTROL

- **EASY-to-see**
- **EASY-to-set**

STEAMS LONGER
and holds more water
yet LIGHTER WEIGHT
—only 3 lbs.

HEATS FASTER

- **HOT in 30 seconds**
- **STEAM in 2 minutes**

LARGE IRONING SURFACE
30 square inches

For ALL the advantages of steam or dry ironing get this marvelous new Sunbeam today. Enjoy its lighter weight, faster heating, greater efficiency. The Sunbeam holds more water than most other irons of this type—yet **WEIGHS LESS**, handles easier, steams longer. The stainless steel tank within the iron feeds the water a drop at a time to the soleplate, where it is instantly converted into steam.

The Sunbeam has the larger ironing surface—over 30 square inches, for more ironing in less time. It has the easy-to-set Steam or Dry Control Button up in the handle, where it is always cool and convenient. Just dial the steady, low heat for your finest lingerie, or the quick, high heat for heavy, dampened linens. Switch instantly from STEAM ironing to DRY ironing or from DRY to STEAM. The Standard-type Sunbeam heats quicker—stays hotter—irons faster—steams longer than most other irons of this type.

Sunbeam also makes the finest lightweight Dry Irons with both open and closed handles.

★ See **THE JACKIE RAE SHOW** on television every Wednesday 9.30—10.00 p.m.

How Joe Hirshhorn Hit the Uranium Jackpot

CONTINUED FROM PAGE 17

when a European syndicate put up \$57,600,000 for a heavy—but not controlling—interest in his biggest mining company, Algom. Reading like a Who's Who of international high finance, the syndicate was headed by Rio Tinto, an enormous British trust which is largely owned by the House of Rothschild. On the day he clinched the deal, turning to an aide, Hirshhorn whispered, "Imagine me—a little Hebrew from Brooklyn—getting all that dough from the Rothschilds!"

At some times Hirshhorn's feats amaze even Hirshhorn. At others they seem only logical to him. "Take Rubinstein," he said recently, meaning Artur, not Serge. "He's got two thousand tunes in his noodle. So he sits down at a piano and plays one. It's beautiful. But why not? The guy's been at it since he was five!"

Hirshhorn began playing the stock market at the age of fourteen, when to help support a widowed mother he became an office boy on Wall Street. As a boy broker he won and lost a fortune at nineteen and became a millionaire—plus before his thirtieth birthday—in, of all years, 1929.

In 1932 he came to Toronto, opened an office and began promoting mines. Ever since, he has been commuting between Bay and Wall Streets, cutting a hustling, colorful figure on both.

Hirshhorn usually spends week ends with his attractive second wife, Lily, and two adopted daughters in their luxurious apartment on New York's

Central Park West. (He has three grown daughters and a son by a previous marriage, terminated ten years ago by divorce.) Early Monday morning his chauffeur drops him off at 165 Broadway, near Wall. There, in an office adorned with abstract paintings, African primitives and bronze busts of T. S. Eliot, Somerset Maugham and himself—from his art collection, valued at a million and a half dollars—he busies himself with local matters. At night he flies to Toronto where he maintains an \$850-a-month suite in the King Edward Hotel.

Always in a hurry, Hirshhorn often starts the day with 7 a.m. breakfast appointments. Then, nattily dressed in a \$250 black suit, ruffled shirt and clip-on bow tie, smoking his first of twenty daily cigars, he rushes down King Street to the towering Bank of Nova Scotia Building.

Fifteen Meetings in a Day

As in every other place he alights, Hirshhorn's office, Suite 1923, is filled with antique furniture and modernistic paintings. Amid a dozen abstracts appears the classic face of Abe Lincoln, looking vastly out of place.

"At 8 a.m.," says an aide, "J. H. comes into the office—and explodes." For the next nine hours he is everywhere—talking to New York, Miami and Montreal at the same time; issuing fifty buy or sell orders, involving half a million dollars, to his brokers; pondering over maps, or wolfing down soup and crackers at his desk in order to cram in annual meetings of three Hirshhorn companies that afternoon. A reporter for the Northern Miner once saw him at fifteen such annual meetings in four hours.

At work, Joe Hirshhorn does things J. P. Morgan never did. He phones a

Most foot troubles begin between ages 8 and 12—caused by badly designed shoes. Prevent this by wearing properly designed shoes during youth.

**"In the market Hirshhorn's a scientist,
but he makes enemies as well as money"**

friend, announces himself as "the rabbi," and sings When Irish Eyes Are Smiling. Too hot, he simply removes his coat, shirt and shoes. Elated, he dances a jig. "You'd think he was taking dope," says Franc Joubin, "if he didn't act that way all the time."

But there's a method to it. "It's my way of relaxing," Hirshhorn says. "If I didn't I'd have ulcers like the rest of Bay Street."

For all the therapeutic horseplay, Hirshhorn thrives on hard work. So do his employees. He once presented a thousand-dollar bill to a man he saw working overtime three nights in a row. When he leaves the office around 5.30 p.m. Hirshhorn goes to his hotel, relaxes with a Scotch or two (neat), eats a big dinner, and then gets busy again. A late-night conference with one of his Toronto lawyers, Senator Salter Hayden, may be interrupted by a phone call from his Washington attorney, former U. S. secretary of state Dean Acheson. Even if he is up till 2 a.m., before dozing off he reads market averages in the New York Times and studies the daily stock fluctuations that his statistician, Bill Snead, has charted for him. "It's my research," Hirshhorn says. "When it comes to the market I'm like a scientist."

Another comparison is made by E. H. Pooler, a Toronto broker. "Hirshhorn is like a juggler juggling seven balls at once," he says. "He never takes his eye off a thing, never misses a trick."

Hirshhorn has much to juggle.

Through his Technical Mine Consultants Ltd. he controls about fifty Canadian companies that produce—or hope to produce—gold, uranium, iron ore, copper, silver, zinc, lead, lithium, columbium, oil and gas in every part of the nation except Nova Scotia, Prince Edward Island and Newfoundland. Through a maze of American firms he also has mining and real-estate holdings in Africa, British Guiana, the Philippines and the U. S. So extensive are Hirshhorn's interests that when he was asked recently to list them he confessed he couldn't. "But just mention one small outfit," says Bill Snead, his statistician, "and J. H. can tell you how much it spent last year on erasers."

However great his wealth, Hirshhorn is no "shucks-it-weren't-nothing" man, nor one to spout homely maxims about the path to success. "I've come a long way," he says, "and it hasn't been easy." He acknowledges that he has made enemies as well as money along the way: "There've always been guys wishing I'd break a leg or drop dead. Anything I've got I've had to fight for—ever since I was a kid."

Joe Hirshhorn can't remember his father, Leon, a merchant of Libau, Latvia, who died when Joe was a baby. But from what he has since learned, he thinks the man was "a *schlemiel*—a nice guy, but not too smart." He reveres the memory of his mother, Amelia, who died twelve years ago at the age of eighty-three. He remembers that when he was six, the second youngest of ten children, she brought them all to America, found rooms in a

**SCOTLAND FIRST—
OR ENGLAND?**

Because there is a distinct similarity of design between the early Scotch spoons and those of England, there has been doubt as to where these patterns originated. Scholars revealed that certain basic designs first began in Scotland, were modified in England, and returned to Scotland again where the art flourished for centuries in many small burghs.

seedy Brooklyn tenement and got a job in a factory. Amelia worked twelve hours a day, six days a week, for twelve dollars. Hirshhorn speaks of poverty. "We never drank real milk," he says. "My mother found a can of condensed milk and water should stretch to three quarts. So I used to walk two miles on Saturdays to a store that sold it three cans for a quarter, a nickel cheaper than around our place." Joe grew up with bandy legs.

At the age of nine he sold newspapers on street corners. He remembers that he was always the smallest boy in his class at school and that he took a razzing for it. Often he had to fight bigger kids in the schoolyard.

His first trip out of Flatbush was a visit by the seventh grade to Staten Island. En route they walked down Broad Street, just off Wall, home of the old New York Curb Market. Joe never got to the island. He hung behind all day, excited by the hundreds of men milling around on the street and sidewalk, hawking what he now knows were "over-the-counter" stocks, while others leaned from the lower windows on both sides of the street, yelling into telephones and flashing signals to the street below. Hirshhorn says he decided then that someday he'd come back there to work.

Two years later he did. At fourteen he quit school and landed a job on Wall Street as an office boy by declaring, falsely, that he could work a telephone switchboard. Told to report back two days later, he went next day to a telephone company and learned how. "As an office boy I didn't talk fast," says Hirshhorn. "I ran."

The Boy Broker Went Broke

When not running, he pestered his broker employer with questions about options, margin and stop losses. Finally the boss sent him to his brother-in-law, Richard D. Whyckoff, owner of the Magazine of Wall Street. Whyckoff gave him a job charting stock averages on the curb for six dollars a week. He picked up another twelve running telegrams from 6 p.m. to 2 a.m. He ran so hard that he blistered his feet. Hirshhorn says that he never went to collect his last pay, lest the other messenger boys, who called him Bandy-legged Joe, should laugh at him for quitting. To make up this loss he drew stock charts in his spare time for an old Wall Street firm, Cyrus J. Lawrence and Sons. Even after Hirshhorn had made his first million dollars a decade or so later, he kept on charting stocks for the Lawrence firm, as a favor. "They were kind to me," he says now. "I was the first Hebrew ever employed there."

Early in 1917 Joe quit the magazine—his salary had risen to fifty dollars a week—got Whyckoff to put up \$250 credit for him with a brokerage house, and broke into the world of Bernard Baruch, Morgan, the Fisher brothers, W. C. Durant, the DuPonts and Rockefellers. In two weeks, speculating on stocks he had been watching and charting for three years, he doubled his money. By October 1918, Hirshhorn, at nineteen, had \$168,000. He was gaily riding a bull market when in November the Armistice shattered it. He salvaged only four thousand.

At this point Patrick F. Cusick, a member of the New York Curb, took Hirshhorn into partnership while the latter still needed a lawyer to sign his documents. "That kid," says Cusick, "was just a blur, going pell-mell all the time. He knew the market inside out. He had ambition and good judgment." Cusick should have relied on it more, Hirshhorn feels today. "If he'd listened to me," he has said, "we'd have owned half of America!"

For STYLE it's SYLKALENE by FORSYTH

Forsyth
MAKER OF CANADA'S FINEST SHIRTS

With Cusick, Hirshhorn prospered. He built his mother a home and made her quit work. In 1922 he married a Brooklyn girl, Jennie Burnam, moved to the Bronx, opened his own brokerage firm and became even more of a blur on Wall Street. One of his friends in those days was George Courtney, a gangling Irishman who now runs Hirshhorn's New York office. "Joe had a lot of rough edges," he recalls. "He certainly wasn't any Andover boy, but he was always riding, like a high-grade jockey."

If Hirshhorn worked hard, so he played. "When Joe was through at night," says Courtney, "sometimes we'd go to a speak-easy for a meal, a few drinks and a lot of fun. Joe was always the life of the party, clowning all the time."

Through the Twenties, the era of "beautiful nonsense" for Wall Street and most of America, Hirshhorn piled up winnings. On March 27, 1929, he applied to buy a seat on the New York Stock Exchange, the world's largest and most exclusive securities mart. But he didn't get it. Exchange records show that the sixteen members who voted on his application turned it down by a huge majority. Hirshhorn denies this emphatically. His version is that, on second thought, he voluntarily withdrew his bid.

In any event, not getting a seat on the exchange was, for Hirshhorn, like missing the Titanic. The crash of October 1929 found Hirshhorn, who had liquidated almost all his assets in August, happily counting his first, second, third and fourth million dollars. Moreover, the value of the stock exchange seat he had planned to buy fell from almost six hundred thousand dollars to less than thirty thousand in about three years.

Hirshhorn, who claims he sensed the crash, says his best moment in business was making that first million. The worst moment, he adds, was losing one of his millions two years later when banks were failing steadily; things were tough all over. Casting about for new fields, he beheld Canada and the glittering chances there "for a man of resources and imagination."

He opened an office in Toronto in 1932. "I brought lots of money with me," he says. "I was no carpetbagger." His name was no sooner on the door than two prospectors, Fred MacLeod and Arthur Cockshutt, knocked on it. They were selling units in a syndicate that was trying to bring a promising-looking gold property into production. Hirshhorn paid out seventeen hundred dollars. The MacLeod-Cockshutt mine, in Ontario's Little Longlac district, later yielded him two hundred thousand.

Then as now, Hirshhorn was a fast workman. One morning he undertook to raise money for a mine. By noon he had talked a Toronto man into putting up fifty thousand dollars. He phoned his client the news. "That was quick work," said he.

"What do you mean 'quick'?" cried Joe. "I had to spend an hour with that guy!"

On Nov. 19, 1933, in the Northern Miner, one of Bay Street's bibles, Hirshhorn placed a full-page advertisement headed, "My Name is Opportunity and I am Paging Canada." His friends acclaim it a great document, comparing favorably with the Magna Charta. Certainly an extraordinary one, it said, in part:

Canada, your day has come. The world is at your feet, begging you to release your riches cramped in Mother Earth... You have the courage! You have the energy, enthusiasm, and the will to carry on! The

Champlain was eager to explore the new land. He spent much time seeking the financial support of French noblemen and merchants.

In 1608, his third trip to Canada, Champlain builds on the site of Quebec. The founding of a great city!

Guided by the friendly Hurons, Champlain in 1615 makes his way from Quebec up the Ottawa River to Georgian Bay. His enthusiasm for the country grows.

Champlain's zeal was shared by Etienne Brulé. His explorations and knowledge of several Indian languages were of great service to Champlain.

Champlain fought tirelessly to gain support for his struggling colony at Quebec. Finally, Cardinal Richelieu at the French Court set up the Company of New France. Champlain had succeeded!

He explored, he built, he administered wisely. Father of New France, he was tireless in laying the foundations of the Canada we know today.

Champlain depended on the support of patrons... men like de Monts, Montmorency, de Caën. These men understood the value of his work, and were proud to invest ships, equipment, supplies and money to help Champlain make the promise of a new land come true.

They were his partners in helping Canada grow.

Today, the banks and lending institutions of Canada are partners to men of initiative and ambition. And you have a share in this nation-

building partnership.

For when you deposit your savings, whenever you do business with your Bank, you contribute to the funds available for Canada's growth—funds with which your Bank makes possible thousands of enterprises, large and small.

When it comes to your financial plans, whether business or personal, see your Bank of Nova Scotia Manager. You'll find him a good man to know.

The BANK of NOVA SCOTIA • Your Partner In Helping Canada Grow

end will surely justify the effort, and you will be repaid amply . . . Carry on until the pick strikes the hard, firm yellow metal, until the cry of Gold resounds through the virgin forests . . . Go forward, then, with light shining in your eyes, with firm step, with courageous resolution, with determination, with the will to do and fight until you win. And as for us, we believe to the extent that we have investments in gold mining and other industries in the Dominion and shall continue to do so.

It was signed, "J. H. Hirshhorn and

Co. Ltd., Investment Bankers."

On one flyer that year—Tashota Gold—Mother Earth nicked Hirshhorn for four hundred thousand. Plunging on with courageous resolution, he bought into Gunnar Gold, an investment that he says netted him a million dollars, and in a manner that intrigued the Ontario Securities Commission, watchdog of Bay Street practices.

Hirshhorn was one of Gunnar's original financiers, along with Charles LaBine and his brother, Gilbert, Canada's first uranium king. For his initial investment of about fifty thou-

sand dollars Hirshhorn got 598,000 "vendor's" shares in the company, though the LaBines kept control. Gunnar went on the Toronto Stock Exchange at fifty-five cents, climbed steadily through 1934 until in August it hit \$2.50. Then slowly it slipped. On Oct. 31 it opened at \$1.43. By noon it had dropped to ninety-four cents. Bay Street buzzed with rumors of manipulation or raiding and Gilbert LaBine, Gunnar's president, asked the Ontario government to investigate his own company.

After a long hearing, the late J. M.

Godfrey, then securities commissioner, absolved the LaBines and concluded that the stock had been manipulated "with very great skill" by Hirshhorn. By selling shares with one hand and buying them back with the other, he said, Hirshhorn had made it seem on the ticker tape that there was "something doing" in Gunnar, thus creating an artificial demand—and price—for Gunnar stock.

In a published report Godfrey said Hirshhorn had been able to dispose of some of his interests at \$2.48—"which might be considered a profitable transaction in view of the fact that (they) had cost him originally about eight cents." He estimated that the loss of value in Gunnar stock on the morning of Oct. 31 amounted to \$1,127,000.

While terming the action a manipulation, Godfrey conceded that it was a perfectly legal one, since the laws against fraud forbade *conspiring* to manipulate and Hirshhorn had evidently told no one what he was up to. A man cannot conspire with himself.

Recalling this now, Hirshhorn seethes. "It was a frame-up," he says, "—they tried to hang me!" By his account, he returned from a trip abroad in 1934, found to his chagrin that Gunnar was slipping and so sold out to avoid more losses. Others, he says, raided the stock; he didn't monkey with it.

A few days after the Godfrey report, Ottawa concluded that Hirshhorn was no longer what he had claimed to be, a non-immigrant visiting the country for casual business or pleasure, but an American citizen earning most of his bread in Canada. He was ordered deported. Hirshhorn appealed, was reclassified two months later as a landed immigrant making his home here, and was permitted to remain.

Too Smart for the Sharpies

Hirshhorn's reputation as a backer of long shots soared again in 1936, after a geologist named Doug Wright whispered a tip in his ear. At that time Preston East Dome, an idle reputedly goldless gold mine in the Porcupine district of northern Ontario, had been trading at less than ten cents on the Toronto Stock Exchange. When Hirshhorn began buying control of it in 1936 the Bay Street rumor was that he was acquiring a real "dog"—a big nothing. As Preston's shares went up, some of Bay Street's more sensitive stockmongers sniffed the aroma of easy money. Suspecting a manipulation they gleefully sold short. That is, they sold Preston stock they didn't own, certain that when the manipulation stopped the stock would fall and they could grab shares that had been ordered at, say, a dollar, for bargain prices of fifty cents. Hirshhorn kept on buying. Instead of falling, Preston shot up and up, past two dollars—geologist Wright had *really* hit gold—and the short sellers were caught. They had to make good their losses, many of them to their intended victim, Hirshhorn himself.

William Bouck, a Toronto lawyer who is president of Preston East Dome, remembers the Hirshhorn of 1936 as "a rough, tough little man who was on the go all the time, always hustling." More conservative operators found him too aggressive, even for Bay Street. "Joe," says Bouck, "was just too smart for a lot of the sharpies. Today they don't like him."

In Hirshhorn's book this is rank understatement. "Many guys around here," he says, "would cut my throat for free. When I came up here they said I was a hit-and-run man, a fast-buck guy. I was the little Hebe from New York City and I've taken a lot of abuse."

It's a pure case
of pleasure!

CARLING'S

Red Cap
Ale

Hirshhorn, his few intimates say, has always been hypersensitive to slights, especially where they concern his religion. Once in the Thirties his family was turned away from a resort hotel in the Pocono Mountains of Pennsylvania. Furious, that very day Hirshhorn bought four hundred wooded acres nearby. On it he built a \$360,000 castle and lived there in lonely splendor.

"I was the only Jew for twenty-five miles around," he says now, "and the neighbors shunned me." One Christmas Hirshhorn decorated two fir trees in front of his home. Both were sawed down by the neighbors, as were the signs that said Private Road. "I gave the most money to the local fire department," he says, "and put up prizes for the school kids. But I just couldn't reach those people." Presently, he gave up trying, sold the house and moved away.

Between the time of his Preston East Dome promotion and the fabulous Blind River uranium find of 1953, Hirshhorn's interests ranged far afield, to Africa, South America and the Philippines. He promoted mines, with some success and some failures. He won consistently on the stock market ("It takes an expert. Speculation is the most scientific art there is but the public treats it like a roulette wheel"). But he was still looking for another bonanza. He was one of the first to join the postwar hunt for uranium in Canada. In 1950 he teamed up with Paul V. McNutt, former governor of Indiana and War Manpower commissioner in the Roosevelt administration, and Josiah Marvel, onetime U. S. ambassador to Denmark, in a promotion called American-Canadian Uranium, which held extensive claims in Saskatchewan. When American-Canadian stock went on sale, New York State's attorney-general Nathaniel Goldstein publicly advised would-be investors that Hirshhorn had twice been convicted and fined for violating Canada's foreign exchange laws—in 1945, for selling securities and attempting to take fifteen thousand dollars out of the country, both without licenses from the Foreign Exchange Control Board. His fines totaled eighty-five hundred dollars).

In Saskatchewan Hirshhorn's record became a political issue, after it was revealed by Goldstein. There, in the 1951 session of the legislature, Liberal Alex Cameron demanded, "How did it happen that Saskatchewan permitted these valuable uranium concessions to fall into the hands of these racketeers?" But during the 1955 session, Hirshhorn was defended by Premier T. C. Douglas: "When he (Hirshhorn) gets a \$207 million contract with the Canadian government to develop uranium in Ontario, he is a first-class free-enterpriser. The Liberal Party is not calling him a 'fraudulent racketeer' now. He was just a 'fraudulent racketeer' when they thought that he might come into Saskatchewan and help develop our industries."

What had happened between times was that Hirshhorn, after years of trying, came up with his big bonanza, Blind River. It all began in 1950 when Hirshhorn met Franc Joubin, a scholarly bespectacled geologist of thirty-eight who had an office in the same building. One day, in a rush for a geologist's report on one of his mines, Hirshhorn scooted into Joubin's office. "Gimme a report. How much? It's a deal. Shake. S'long." Then he was gone.

After that Joubin did more jobs for Hirshhorn. He found two small but profitable uranium mines and was hired in 1952 to run Technical Mine Consultants.

For several years Joubin had been

nagged by the notion that Ontario's well-prospected Algoma district was hiding uranium. He was prowling the bush around Blind River, a seasonal lumbering town midway between Sudbury and Sault Ste. Marie, once when his Geiger counter clicked madly. But, to his dismay, ore chipped from the surface assayed only feeble traces of uranium. Like other prospectors before him, Joubin felt at first that thorium, the only other appreciably radioactive element, must be causing the Geiger to fuss. He tried to enlist the aid of a dozen mining companies in Canada

and the United States. All turned him down. Blind River, they said, just didn't have the right geology for uranium.

Then, on a hunch, Joubin analyzed his old samples for thorium alone. They contained barely any. If there were little radioactivity in the surface ore, Joubin reasoned, it must have been leached away by the wear and tear of time, a process that can occur to uranium, but not thorium. So there had to be uranium, deeper down.

He took his theory to Hirshhorn. Where all others had turned Joubin

down flat, Hirshhorn quickly came up with the thirty thousand dollars he needed to take out core samples. Of fifty-six drill holes, fifty hit pay dirt.

The events that followed were almost as secretive as the Manhattan Project. Working quickly, Hirshhorn sat down with William Bouck, president of Preston East Dome, which Hirshhorn controlled. In return for a 50-50 split with Technical Mine Consultants, Bouck put up Preston money and men to stake out claims at Blind River. In effect, Hirshhorn drew up a financial deal with Hirshhorn.

THE BRITISH AMERICAN OIL COMPANY LIMITED

end will surely justify the effort, and you will be repaid amply . . . Carry on until the pick strikes the hard, firm yellow metal, until the cry of Gold resounds through the virgin forests . . . Go forward, then, with light shining in your eyes, with firm step, with courageous resolution, with determination, with the will to do and fight until you win. And as for us, we believe to the extent that we have investments in gold mining and other industries in the Dominion and shall continue to do so.

It was signed, "J. H. Hirshhorn and

Co., Ltd., Investment Bankers."

On one flyer that year—Tashota Gold—Mother Earth nicked Hirshhorn for four hundred thousand. Plunging on with courageous resolution, he bought into Gunnar Gold, an investment that he says netted him a million dollars, and in a manner that intrigued the Ontario Securities Commission, watchdog of Bay Street practices.

Hirshhorn was one of Gunnar's original financiers, along with Charles LaBine and his brother, Gilbert, Canada's first uranium king. For his initial investment of about fifty thou-

sand dollars Hirshhorn got 598,000 "vendor's" shares in the company, though the LaBines kept control. Gunnar went on the Toronto Stock Exchange at fifty-five cents, climbed steadily through 1934 until in August it hit \$2.50. Then slowly it slipped. On Oct. 31 it opened at \$1.43. By noon it had dropped to ninety-four cents. Bay Street buzzed with rumors of manipulation or raiding and Gilbert LaBine, Gunnar's president, asked the Ontario government to investigate his own company.

After a long hearing, the late J. M.

Godfrey, then securities commissioner, absolved the LaBines and concluded that the stock had been manipulated "with very great skill" by Hirshhorn. By selling shares with one hand and buying them back with the other, he said, Hirshhorn had made it seem on the ticker tape that there was "something doing" in Gunnar, thus creating an artificial demand—and price—for Gunnar stock.

In a published report Godfrey said Hirshhorn had been able to dispose of some of his interests at \$2.48—"which might be considered a profitable transaction in view of the fact that (they) had cost him originally about eight cents." He estimated that the loss of value in Gunnar stock on the morning of Oct. 31 amounted to \$1,127,000.

While terming the action a manipulation, Godfrey conceded that it was a perfectly legal one, since the laws against fraud forbade *conspiring* to manipulate and Hirshhorn had evidently told no one what he was up to. A man cannot conspire with himself.

Recalling this now, Hirshhorn seethes. "It was a frame-up," he says, "—they tried to hang me!" By his account, he returned from a trip abroad in 1934, found to his chagrin that Gunnar was slipping and so sold out to avoid more losses. Others, he says, raided the stock; he didn't monkey with it.

A few days after the Godfrey report, Ottawa concluded that Hirshhorn was no longer what he had claimed to be, a non-immigrant visiting the country for casual business or pleasure, but an American citizen earning most of his bread in Canada. He was ordered deported. Hirshhorn appealed, was reclassified two months later as a landed immigrant making his home here, and was permitted to remain.

Too Smart for the Sharpies

Hirshhorn's reputation as a backer of long shots soared again in 1936, after a geologist named Doug Wright whispered a tip in his ear. At that time Preston East Dome, an idle reputedly goldless gold mine in the Porcupine district of northern Ontario, had been trading at less than ten cents on the Toronto Stock Exchange. When Hirshhorn began buying control of it in 1936 the Bay Street rumor was that he was acquiring a real "dog"—a big nothing. As Preston's shares went up, some of Bay Street's more sensitive stockmongers sniffed the aroma of easy money. Suspecting a manipulation they gleefully sold short. That is, they sold Preston stock they didn't own, certain that when the manipulation stopped the stock would fall and they could grab shares that had been ordered at, say, a dollar, for bargain prices of fifty cents. Hirshhorn kept on buying. Instead of falling, Preston shot up and up, past two dollars—geologist Wright had *really* hit gold—and the short sellers were caught. They had to make good their losses, many of them to their intended victim, Hirshhorn himself.

William Bouck, a Toronto lawyer who is president of Preston East Dome, remembers the Hirshhorn of 1936 as "a rough, tough little man who was on the go all the time, always hustling." More conservative operators found him too aggressive, even for Bay Street. "Joe," says Bouck, "was just too smart for a lot of the sharpies. Today they don't like him."

In Hirshhorn's book this is rank understatement. "Many guys around here," he says, "would cut my throat for free. When I came up here they said I was a hit-and-run man, a fast-buck guy. I was the little Hebe from New York City and I've taken a lot of abuse."

THE BRITISH AMERICAN OIL COMPANY LIMITED

Then, since the area to be staked lay perilously close to both the Trans-Canada Highway and a CPR line, they organized what has become known as "the back-door staking bee." From South Porcupine, two hundred and fifty miles from Blind River, pontoon planes carrying seventy-five prospectors, geologists and even lawyers took off, fanned to the north, then swung southwest toward Algoma. For six weeks, not told where they were, the stakers followed their Geigers along a vast Z-shaped path that snaked for a hundred miles through the bush.

If Hirshhorn was worried that word would leak out, it didn't show. In Toronto, flitting from office to office and phone to phone, he kept up his normally abnormal pace. "Joe always acts like he's in the middle of a hot staking bee," says Franc Joubin.

On July 11, the staking done, four lawyers who had been in on the bee strode into mine recorders' offices in widely separated parts of Ontario and plunked down sixteen hundred claims covering an area of almost sixty-five thousand acres. Under the collective nose of Bay Street, where secrets are

hard to keep, Hirshhorn and Joubin had scored an amazing feat.

They split the credit. Hirshhorn says of Joubin, "Franc—he knows his rock." Joubin, now a millionaire himself, says, "What Joe says in finance goes with me. He's got a brain like an adding machine."

It worked especially well when the Rio Tinto syndicate—headed by the Earl of Bessborough, a former Canadian governor-general—wanted in. "They came to me," Hirshhorn says with satisfaction. "I didn't have to go running to them."

For almost four months negotiations went on on both sides of the Atlantic. Duncan Derry, a Rio Tinto official, recalls, "There was a big contrast between the reserved Englishmen at one end of the table and little Joe at the other." Pleased, little Joe danced jigs or sang into the telephone. Displeased, he used words the British hadn't heard before. But in the end he had someone else's money to finance his mine, without losing control of it.

Hirshhorn estimates that his Algoma and Pronto holdings, coupled with many other Blind River claims split among his many other companies, will net him more than thirty million dollars. "I'm just sitting on eggs," he says, "waiting for them to hatch."

But such good fortune, Hirshhorn has found, is not without its peculiar price. "Ever since Blind River," he complains, "people've been bugging me for money." He doesn't refer to bonafide charities or worthy institutions. To these Hirshhorn is generous. This year, among other donations, he has put up fifty thousand dollars to educate social workers from foreign lands at Columbia University, given ten thousand to Manhattan College and handed Blind River's hospital a new operating room.

Those who bother him are the hundreds of cheeky strangers who write, phone and visit him with their hands out. "One guy," says Hirshhorn, "asked me to give him two million bucks. He was broke and wanted to build his wife a home—on the Riviera yet!"

Hirshhorn sees his wealth as a public responsibility. "After a guy has a couple of million dollars he's a bum to want more," he says. "You can only eat three meals a day—I tried four and got sick. I got maybe twenty suits but I can just wear one at a time, and I can't use more than two shirts a day."

This being so, Hirshhorn says he feels an obligation to put the surplus to good use. At first he intended to set up an educational foundation. "I never had much education," he says. "People say to me, 'What the hell, you've done okay.' Sure, but I might of done better." For this reason he insisted that the four children of his first marriage go to college. "I used to tell them, 'People can take your money away, but they can't steal what's in your noodle.'"

Recently, however, his plans have changed. Hirshhorn now says he wants to set up a foundation, within a year, to provide free mental hygiene for children in Canada and the United States. (Close friends say he is thinking in terms of a fifty-million-dollar trust, including all his Algoma stock.) "Many young kids lack a sense of balance," Hirshhorn says. "We'll have better people if they understand what makes them tick. Psychiatry and analysis has done a lot for me. I'm grateful."

A Backwoods Dream Town

Another ambitious Hirshhorn plan is to build near Blind River "the world's most beautiful small town," chiefly to accommodate the families of Pronto mine workers. This, he hopes, will be the crowning achievement of his life, of which his grandchildren may well say, "Hey! The old guy really did something!"

Located on an evergreen rise overlooking the north channel of Lake Huron, three miles from Hirshhorn's magnificent summer home at Bootlegger's Bay, the dream town is thus far only a large parcel of real estate—his—and a gleaming silver-and-black model, the work of Philip C. Johnson, director of the department of architecture at the New York Museum of Modern Art, and of John B. Parkin Associates, a Toronto firm.

What Hirshhorn wants it to be is a thirty-five-million-dollar backwoods metropolis (hoped-for population: 25,000) of contemporary houses and apartment buildings, wide streets, forest parks, a shopping centre, daily newspaper, schools, and arena and concert hall. So that it will not be a "company town," Hirshhorn wants all homes and stores to be privately owned and he intends inviting in several light clean industries to balance its economy. To launch it Hirshhorn plans spending about two million readying parks.

Of course you can afford an "oriental"

Sar-u-khan Pattern 902/1

YOU NEED NOT BE RICH to enjoy the soft, velvety pile, and jewel-toned colours of oriental carpets in your home. For the inspired designs of the ancient craftsmen and their gift of colour harmony have been re-created for you by Brinton-Peterboro in their wide range of Sarouk and Sar-u-khan carpets.

Using only pure wool . . . and dyes that promise lifetime brilliance . . . Brinton-Peterboro weave the glorious patterns right through to the back of the carpet. Examine the back of a Sarouk or Sar-u-khan carpet after you've admired the pattern on the front—you'll see why your Sarouk and Sar-u-khan oriental carpets will clothe your floors with changeless beauty, through many years to come.

Every colour is woven right through!

CARPET COMPANY LIMITED

"What you say about Smith and Smith may be true, Miss Bixby, but I still wish this letter addressed to them as 'Gentlemen.'"

roads, sewage and water systems. "I'm not going to make a nickel on this deal," he says. "I just want Canada to have one town that's laid out from an aesthetic standpoint."

For the aesthetic effect, Hirshhorn's town—to be named Hirshhorn, Ontario—will fan about an Italian piazza-like square, featuring a glittering glass-marble-and-chrome office building on stilts, statues by Henry Moore and Sir Jacob Epstein and a million-dollar art centre, the personal gift of Hirshhorn the man to Hirshhorn the model town.

To this art centre Hirshhorn will give many of his eight hundred-odd paintings and pieces of sculpture, most of them shockingly modern. "Maybe the miners won't appreciate it," he says, "but their kids will grow up with a feeling for great art."

Art is Hirshhorn's passion, apart from work. His private collection, now estimated to be worth a million and a half, began with etchings in the Twenties, progressed to French traditionals and today, the critics say, includes many of the best, worst and most controversial of the moderns. So hip is Hirshhorn on his art that he sometimes steals away from business meetings to visit galleries, searching for works that "sing," "have intellect" or make him "feel weak." In one notably weak day in 1941 he bought sixty-five paintings by Milton Avery, an American modernist. At an exhibit a few years later he bought a canvas by Lily Harmon and was introduced to the artist, a dark, striking New York girl twenty years his junior. They were married in 1945. "It was cheaper to marry her," Hirshhorn jokes, "than to keep on buying her paintings."

Good paintings, Hirshhorn avers, are sound investments: "They keep on giving." The ideas behind his projected model town and the mental-health foundation are somewhat similar. "I've taken a lot," he says. "Now I want to give something back to the people." On a less humble note he has also said, "Canada has been good to me. But, then, I've been good to Canada."

If the town and the foundation sound like a man preparing his own monument, it should not be concluded that Joe Hirshhorn means to let up. He once tried to. In 1934, soon after coming to Canada, he collapsed in his Toronto office from complete exhaustion. On his doctor's advice he retired, moved to Miami Beach, Fla., and lay around doing nothing for four months. "It was awful," he says. Just for kicks, to get the feel of business again, he bought a nearby chunk of real estate for sixty-five hundred dollars and a short time later resold it for eighty-four thousand.

"I just couldn't retire to a park bench and become a philosopher," Hirshhorn says today. "I'd go nuts. I gotta keep going."

Many wonder what keeps Hirshhorn going. Some feel that he is propelled by the basest of human motives, a burning desire to corner the market on money. Others suspect that he is trying to prove something—just what, they're not quite sure. Hirshhorn scoffs at both theories. "With me," he says, "making money is just a game. I get a bang out of it."

Whatever the reason, since Blind River he has been going as fast as ever, his mind racing with grand schemes. Not long ago an acquaintance congratulated him on the big Rio Tinto deal. Joe Hirshhorn took another drag on his stogie and winked through the smoke at his friend, "Ahhhh," he said with an audible sigh, "You ain't seen nothin' yet!" ★

Backstage at Ottawa

CONTINUED FROM PAGE 6

"moratorium" resolution putting off the China question to some later date—but this will probably be the last time such a vote is cast. Before the issue comes before the UN Assembly again, Ottawa hopes to have made its real opinion clear.

CANADA'S CHANGING attitude toward China was one piece of good news

for Pearson to take to the Colombo Plan conference in Singapore. On his previous trip east in 1950, to the original Colombo conference that launched the capital assistance plan, India's Prime Minister Nehru and other Asian statesmen persuaded him the step was urgently necessary. It was pleasant to be able to report that their advice is beginning to bear fruit.

But a more important piece of good news for the Singapore conference was the intimation of a substantial increase in Canada's contribution to the Colombo Plan. No new over-all figure is to be

mentioned, but Canada will in fact undertake new projects and absorb unexpected increases in the cost of some old ones. Altogether these additions may amount to several million dollars, over and above the gift of a nuclear reactor to India which will represent an extra two and a half million a year for the next three years.

Enlargement of the Canadian Colombo program is a belated triumph for External Affairs over Finance. A year ago, when the Colombo Plan council met in Ottawa, External wanted to raise Canada's share by ten million or

so. Walter Harris, who had just taken over Finance, didn't agree. For one thing he wanted to cut expenditures and taxes; for another, he didn't think the increase would make any significant difference to Asia. As he saw it, Canada's twenty-five-million-dollar program was a token at best, a worthy gesture of friendship but the merest drop in the ocean of Asia's economic problem. Even if it were raised to fifty million or one hundred million it would still be a token, Harris argued; why not leave it at twenty-five million?

Luckily for External's side of the argument, some Canadian cabinet ministers had been traveling in the Far East and making somewhat over-encouraging speeches there. Jimmy Sinclair, the Minister of Fisheries, probably did most to stir Asian expectations, but even the more cautious words of Prime Minister St. Laurent himself left behind an impression that Canada would offer more help. Burma in particular, as a newcomer to the Colombo Plan, came to Ottawa counting on Canadian help. Unless the twenty-five-million-dollar program were increased, Burma could only be brought in by cutting the amounts already allotted to India, Pakistan and Ceylon—which was the precise opposite of what these countries had been led to expect.

Where Should the Money Go?

On the other hand, even the warmest advocates of the increase admitted they were not ready to spend ten million on new projects in 1954. Considerable time and some money would be needed to survey the various proposals and draw up detailed plans and specifications. So the compromise of 1954 was to raise the Canadian share by one million, not enough for any new projects but enough to plan some.

This year, therefore, the case for a larger Colombo Plan budget was much stronger than it was last year. However, for two quite different reasons there was still very strong opposition to it.

One was the simple and permanent fact that ministers with domestic responsibilities would rather spend money at home than abroad. If the 1955 boom brings extra money to the treasury, if we don't have a deficit after all, they can think of all kinds of popular uses for such windfalls—all the way from new fish-packing plants in Newfoundland to the South Saskatchewan Dam.

Pearson of course has the liveliest sympathy for this point of view. He has to be elected like everybody else and he could use more money in Algoma East just as readily as Jack Pickersgill could use it in Bonaville-Twilligate. But like all foreign ministers he is kept in daily awareness of the political problem abroad as well as at home—the growing intensity of the political struggle between the communist world and the free world, as the threat of a military struggle recedes. Pearson, again like all foreign ministers in the wealthier democracies, would like to match every reduction in military aid with an increase at least half as large in economic aid to countries whose needs are desperate.

In spite of domestic temptations, his colleagues go along with this view more readily than their opposite numbers in some other commonwealth countries. Pearson sometimes finds himself the object of considerable envy at international gatherings because of the amount of support he gets in cabinet. But in this case the suggested increase in the Colombo Plan vote met another obstacle created by the Colombo Plan itself.

Pakistan's Warsak Dam, large hydro-electric power development, is one of the big items in Canada's capital-assistance program. According to original estimates the dollar cost of Warsak was to have been about twenty-six million dollars, of which Canada would contribute the larger share by donating all the generating equipment. The rest of the dollar costs, and all of the rupee costs amounting to the equivalent of twenty-four million, were to be borne by Pakistan.

Two changes have taken place in this arrangement. First, the dollar costs have had to be increased by about eleven million, and the rupee costs cut in half. Second, the Pakistan government confessed last year that it could not put up its agreed share of the dollar costs anyway. Canada had to choose between assuming the whole of the dollar expenditure, or abandoning a huge project already well under way.

Canada is putting up the money but not without some irritation and giving. It won't cost the Canadian taxpayer any more in the end, for the extra money diverted to the Warsak Dam would otherwise have gone to other projects which now will not be started. But Pakistan's failure to carry out its undertaking made a poor impression on the Canadian cabinet ministers who must approve each item of Colombo Plan expenditure.

In the circumstances it was probably a considerable achievement to put through the gift of a nuclear reactor to India. This may cost as much as eight million dollars over a three-year period, and since all Asian scientists will have the right to use its facilities it can be considered as aid to the whole subcontinent, not to India alone. At about two and a half million dollars a year it represents a ten-percent boost in the Canadian program of assistance to South and Southeast Asia.

But Canada will in fact go even further. Somewhat reluctantly, and not without some nervousness about political reaction at home, the government has decided that useful new projects in such countries as Burma and Indonesia should get Canadian help, and that such help must not be subtracted from the aid already going to India, Pakistan and Ceylon. The promises of the last two years, express or implied, are to be carried out. ★

Ottawa's Creaky Divorce Machine

CONTINUED FROM PAGE 11

Regier, the young British Columbia MP who has led the CCF's campaign for divorce reform ever since his election in 1953. The House sent the bill for re-study to its own Private Bills Committee. At that point the lid blew off the case. The husband withdrew his divorce petition; the reason he gave in writing was the nasty publicity he had got, but his lawyer told the Commons committee that the witnesses he had hired turned out to be "utterly untrustworthy." The divorce committee has not yet regained, among MPs, the stature it lost by accepting their tall story.

Actually, other less sensational cases are graver indictments of parliamentary divorce. Any court, however sound in theory and concept, can make stupid mistakes from time to time. But some recent judgments of the Senate Divorce Committee have been bad, not through individual error but through defects in the system itself.

Last winter one husband came seeking a divorce on the usual ground that his wife had committed adultery, and he had no trouble proving this because the wife admitted it. She was an ignorant amiable wench who hadn't lived with her husband for some years; she earned her living as a waitress. She hadn't committed adultery as often as her husband's witnesses alleged, she told the committee, but on one occasion she had decided that since he was stepping out every night, she was entitled to do the same.

Why Did She Fight It?

According to the accepted practice of the Senate Divorce Committee no more proof than this was required. It was hard to make out, from the Senate record, why the girl had bothered to contest the divorce at all—it would have been cheaper to let it go through uncontested.

But when the bill came before the House Private Bills Committee some questions were asked that hadn't been asked before. It turned out that the husband had already got a judicial separation, four years before, on grounds of the same adultery. By Quebec law she was entitled to half the community property at that time.

Under cross-examination the husband reluctantly admitted that his wife took no legal advice at the time of their separation. He himself had told her that her share was half the value of their household furniture, and he'd given her one thousand dollars as full and final payment.

Why hadn't he included his business in his declaration of community property? Why hadn't he included his automobile, and various other items? Getting no satisfactory answer to these questions, MPs then asked whether he had ever had the separation agreement made final in court. They found he had not. They decided that his motive in seeking a divorce was to make sure his wife would never be able to claim her just share of their family possessions.

The House committee also learned that, so far as adultery was concerned, this husband was in no position to

criticize his wife's behavior. In the end, committee chairman John Hunter, a Liberal MP from Toronto, summed up roughly as follows:

"Gentlemen, we are a sovereign parliament and we can grant or refuse a divorce on any ground or no ground. In this case I suggest that the petitioner, by his conduct, has disintegrated himself to the relief that he is asking." The committee unanimously agreed and the divorce bill which the Senate had passed was thrown out.

In a provincial divorce court all these background facts would have been known at the outset. As a matter of routine, every petitioner must disclose any previous legal proceedings such as a judicial separation. He must also disclose any financial agreement or division of property and any arrangements for care or custody of the children. Adultery is the sole ground for divorce in Canada (except in Nova Scotia where cruelty is also a ground) but divorce courts at least can take the general family situation into account.

Why can't the Senate Divorce Committee do likewise?

Senators answer that the reason is constitutional. The British North America Act gives the federal government jurisdiction over divorce, but the provinces have authority on "property and civil rights." Hence, the argument runs, all such questions as alimony and the care of children must be left to provincial courts. The Senate and House of Commons must confine themselves to one question and one only: was adultery committed or was it not?

As a matter of fact the question of parliament's constitutional authority has never been tested in court. Parliament in one case did include alimony provisions in a divorce act, when it dissolved the marriage of a couple named Campbell away back in 1879. The Campbell divorce was never upset or even challenged. However, some high court judges in the 1880s made unflattering remarks about it and the general opinion seemed to be that alimony was none of parliament's business. The tradition grew up which is observed to this day, of confining the Senate committee's enquiry to the sole question of adultery.

Sometimes this makes it easier to get a divorce, as in the cases above-mentioned. Sometimes, and just as unfairly, it makes divorce more difficult. Here's an example, also from last winter's batch of cases: again the petitioner was a husband, the respondent an estranged wife to whom he was paying an allowance. The correspondent was a lodger in the wife's apartment, but he solemnly swore that he slept on a sofa in the living room and dressed and undressed in the bathroom. The Senate committee disbelieved this tale and recommended a divorce.

The House of Commons committee was not so sure. Perhaps because the petitioner's chief witnesses were those same discredited detectives who'd been convicted of fabricating evidence, perhaps because of a fear that the wife might be left destitute, the MPs threw out this Senate bill as well.

Actually, the petitioner says he's quite willing to go on paying the allowance to his first wife and their child. All he wants, he says, is the freedom to marry again and begin a new life of his own. But under existing parliamentary procedure he never got a chance to testify to this effect, and

We're not allowed to meddle in alimony, senators say. But what's stopping them?

French LIQUEURS

CRÈME DE CACAO

BLACKBERRY

ANISETTE

APRY

CRÈME DE MENTHE

Paradise Cocktail
 1/2 Dry Brizard
 1/4 Dry Gin
 Shake with ice, strain and serve

Alexander Cocktail
 1/4 Crème de Cacao
 1/4 Dry Gin
 1/4 Fresh Cream

TWO centuries ago, a sweet and gracious lady living in the south of France, Mlle. Marie Brizard, sent samples of her incomparable Anisette Liqueur to the court of Louis XV. Her discovery was proclaimed a triumph of matchless flavour and bouquet. Today, after two hundred years, Marie Brizard Liqueurs still remain in the hands of direct descendants of their creator, unchanged in formula and tradition. Few things that contribute to more enjoyable and more gracious living in our modern world can boast such a famous heritage. In every field of achievement there is always one name that signifies the best. In the realm of fine French liqueurs, the world has given this highest honour to the name MARIE BRIZARD.

Perfect Refreshment!
 Pour two fingers of Menthe or Anisette Brizard in a large glass and fill up with iced water. Or put crushed ice in a brandy glass and cover with Menthe or Anisette Brizard. Either way, you get a most delicious, cooling drink!

A Symbol of Value . . .

. . . to our advertisers because media circulations, as well as markets, are ever changing. Therefore it is highly speculative to buy advertising space on any basis other than current facts. The up-to-date factual information in Audit Bureau of Circulations reports provides a sound basis for exercising judgment in comparing and evaluating media. Coordination between advertising efforts and sales activities reaches maximum effectiveness when media are applied to markets through the study of the complete data in ABC reports. The ABC enables the advertiser to know exactly what he is buying.

. . . to our readers because in seeing to it that advertisers pay only for what they get, the ABC performs a function of high importance to the reader. The right to purchase or not to purchase this magazine gives to the reader, and no one else, the power to pass effective judgment on its success in serving his, the reader's, interests.

The Audit Bureau of Circulations is the keystone of relations between the reader, the advertiser and the publisher.

MACLEAN'S

CANADA'S NATIONAL MAGAZINE

MEMBER AUDIT BUREAU OF CIRCULATIONS

therefore he didn't get his divorce.

One thing he can do, though, that he couldn't do in a court of law—he can come back again next session and seek another divorce bill on the same facts. In court this wouldn't be allowed because court judgments are final. Parliamentary judgments are not. Already, at least two of the five men whose divorces were blocked in the Commons last session have set things in motion for another try next year.

This gives the petitioner a heavy advantage if he is a rich husband and the respondent a poor wife. Presenting a defense is a costly business. The Senate committee can and often does order the petitioning husband to provide money for his wife's defense, but the funds thus ordered are seldom enough to pay everything.

In one case which was stalled by the House of Commons in 1954 and renewed by the husband in 1955, the wife wrote last January that she was abandoning her defense. The reason, she said, was that she had no more money.

To its credit the Senate Divorce Committee refused to accept this withdrawal. It reopened the case and ordered seventy-five dollars sent to the wife so she could come to Ottawa and defend herself. Eventually she won out; her husband's divorce bill was defeated in the House of Commons by a vote of 43 to 36. But when it was all over, Erhart Regier told parliament, the woman got a bill from her lawyer for eight hundred and fifty dollars.

Courts Tie a Tidy Package

On the other hand parliamentary divorce procedure can be equally unfair and equally exorbitant for the petitioner.

Of the five contested cases last session that went through the Senate but failed to pass the House, only three were actually voted down either in committee or in the House itself. The other two were simply left on the order paper when parliament prorogued; CCF members, a small minority, had "talked them out" in the brief hour that parliament reserved for private bills on the second-last day of the session. These two petitioners had paid upwards of one thousand dollars apiece for divorce bills which were approved at three of the four stages they had to go through and never actually disapproved at any stage. Yet to have their petitions heard next year they must start at the beginning and pay all over again.

None of these anomalies exist where divorces are granted by the courts. Courts can give final and definite judgments. Courts can assess costs against the loser, if they think fit. Courts can deal with all aspects of a divorce at once—dissolution of the marriage, custody of children, division of property—and tie them all up in one tidy, inexpensive package.

Ironically, the place where a court's advantages over the Senate Divorce Committee are most clearly recognized is the Senate itself. It was the Senate that began the long fight to set up divorce courts for Ontario. Until 1930 Ontario citizens as well as Quebecers had no means of obtaining divorces except by means of private acts of parliament. Senate bills to create Ontario divorce courts were passed three times by large majorities—in 1920, 1927 and 1928—before a similar measure ever got through the House of Commons.

The late Senator Lendrum McMeans, chairman of the Senate Divorce Committee for many years, told the Senate

Dangerous Driving

BY PAUL STEINER

A Montreal salesman, making his first visit to Aylmer, Que., found it doesn't pay to follow too closely the directions of a pedestrian. Asking a passer-by about a certain street the salesman was told to drive to the end of Main Street. This he did, only to discover that Main Street runs right into the Ottawa River—and so did his car, sinking in ten feet of water.

A Halifax motorist entered a dry-cleaning store to take advantage of the pants-pressed-while-you-wait service. He just removed his trousers and was sitting in a booth when he noticed a police constable approach his parked car and tag it for illegal parking—a genuine case of a man being caught with his pants down.

When a Vancouver woman was driving a car for the first time in fourteen years she was arrested on charges of driving "while her ability was impaired." But her lawyer got her off after telling the court that her ability had not been impaired because she had no driving ability to begin with.

A Trenton, Ont., man spotted an object in the bush while hunting. He fired a volley of four shots at it and then ran to see what he had bagged. It was his automobile.

A group of government workers in Ottawa managed to get the better of local parking regulations by giving their car keys to an office boy and having him spend his working hours transferring each car as its parking time limit expired.

Sir Robert Watson-Watt, British inventor of radar, ruefully admitted in Kingston, Ont., that his invention is a mixed blessing. He was fined twelve and a half dollars after police caught him in a speed trap—operated by radar.

A Montreal man testified in court that a four-hundred-pound accomplice picked up the rear of a parked automobile so he could steal its wheels.

When two Peterborough, Ont., youths were arrested for stealing a local lawyer's car, they requested that he act as their counsel.

A Toronto man was caught rubbing a chalk mark, used by police to check parking, off a tire of a parked automobile. He was fined ten dollars in spite of his plea that he had only erased the mark because the vehicle belonged to his boss' wife.

In Eastview, Ont., a wrecker bought a 1929 automobile for scrap but when he went out to haul home his purchase he got mixed up, picked up the wrong vehicle, cut it up for scrap, and promptly got sued by the owner.

A Toronto man paid a ten-dollar fine after a policeman testified his car had a broken muffler, no emergency brake, no foot brake, no front or rear lights, no windshield wipers, no horn and no rear-view mirror. "That thing shouldn't be on the road," said the magistrate. "It should be in the junk yard. Where is it now?" "In the junk yard, sir," replied the defendant sadly.

British Columbia insurance adjusters wrestled with the problem: what happens when a motorist collides with an airplane? A plane developed engine trouble near Vernon and was forced to land on a highway where it crashed into an automobile.

An Edmonton man was fined five dollars and costs after he was charged with installing an old Model-T car horn next to his regular car horns in his '54 Buick and blowing the antique instrument with gusto as he drove through town.

Can Quebec fight divorce, critics ask, if she leaves the machinery to others?

will not vote for them but he will abstain—that's why the recorded votes on divorce bills are always so small. A general law, on which a court could act, would be a different matter.

"Never will Quebec accept the principle of divorce," said Armand Dumas of Villeneuve. "By accepting this bill we would recognize divorce."

In practice Quebecers are not always as hostile to divorce as they are in principle. An MP from a rural riding in the heart of down-river Quebec was involved a few years ago in a divorce that set the gossips twittering for months; nevertheless he was re-elected with an almost undiminished majority. Ostensibly, Quebec tolerates parliamentary divorce bills merely as a sop to the Protestant minority, but Senator Walter Aseltine kept track for several years of the petitioners before the Senate committee—twenty-five percent, he found, were Roman Catholics. Not long ago an unexpected snap vote in the House Private Bills Committee defeated a divorce bill from a *Canadien* petitioner. Next day the chairman reconvened the committee, recalled the bill on a technicality, and took the vote over again with a solid majority of Liberals voting "aye." The Opposition heard unofficially that the bill had been recalled at the request of some Quebec MPs—the petitioner was a friend of theirs.

More Grounds Than Adultery?

But in principle and for the record they are unalterably opposed to divorce under any and all circumstances. On any general divorce legislation they vote "no"; on ordinary individual divorce bills they abstain from voting at all, and often walk out of the chamber if any divorce bill is discussed. Quebecers will not serve on the committees of either house that must deal with divorces. This attitude has several ironic results. One is to leave parliamentary divorce in the hands of men who have no strong objection to it.

Senator Aseltine, longtime chairman of the divorce committee and still a leading member, last spring introduced a bill to broaden the grounds of divorce by adding cruelty, desertion and incurable insanity to the sole existing ground, adultery. Among those who spoke warmly in favor of the bill was the present divorce committee chairman, Senator Arthur Roebuck.

"By the time these cases come to us, the real marriage is a thing of the past," Senator Roebuck said. "I have not found a single case in which we could defer action in the hope of re-establishing the true marriage." And he obviously felt that when the "true marriage" has broken down, the legal bond had best be dissolved.

Senator George H. Ross, who often serves as chairman of subcommittees on divorce, said in the same debate:

"I'd like to see divorce actions transferred from parliament to the courts. I wonder if we could do this by making domicile Canada-wide instead of province-wide. Then people who live in Quebec and Newfoundland could get divorces in the courts of other provinces."

This suggestion was new to CCFers. Some of them are looking into it now to see if it's an improvement on their proposal to give divorce authority to the Exchequer Court.

But whatever these strange allies,

the Senate and the CCF, may do, the odds are against any fundamental change in the Canadian divorce system. It's bad medicine politically and the major parties won't touch it. Realists talk less about creating a new divorce system than about improving the one we've got.

There is no serious criticism of the Senate's procedure in uncontested cases. Many are prepared by collusion, often with fabricated evidence, but although this may be suspected it is almost impossible to prove. The Senate committee is no more lax than any other divorce court in letting these go by. Criticism is focused entirely on the handful of cases—seventeen last year out of four hundred and fourteen petitions—in which the respondent opposes the divorce and presents evidence which contradicts that of the petitioner.

One point often made is that the Senate committee is too lenient with liars.

When Erhart Regier got up in the Commons to report withdrawal of the case that had depended on the two "detectives" and their roommate, he asked whose responsibility it was to prosecute such men for perjury. The Minister of Justice, Hon. Stuart Garson, answered cautiously that the actual prosecution would be a matter for the attorney-general of Ontario, but he thought "some responsible official" of the Senate committee might draw the matter to the attorney-general's attention.

So far as is known, no Senate official has ever done this. There was one case in 1928 when a man was convicted and sentenced to two years for perjury before the Senate committee, but the charge was laid by a slandered wife against the man who had borne false witness. The Senate itself takes no action against witnesses whom it disbelieves, even when strong evidence of perjury is available.

Another frequent complaint is that of the high cost of Senate divorces. Much of this is outside the Senate's control, but not all—some at least of the financial burdens are imposed by the Senate committee's own rules which could be altered at will.

This is equally true about another cause of criticism, the gravest and most just of all—the Senate committee's failure to take any cognizance whatever of the general family situation, the alimony arrangements if any, the care and custody of the children.

Even if senators are right in thinking these to be provincial responsibilities under the "property and civil rights" clause, the Parliament of Canada is sovereign and can act for its own reasons. Nothing prevents the Senate committee from demanding of every petitioner a full statement with documentary proof that these matters have been attended to. Whether or not the federal parliament has the right to impose these arrangements as part of a divorce bill, it certainly has the right to refuse a divorce until it is satisfied the arrangements have been made.

All these points could be met by the Senate committee without passing a single law, simply by making changes in its practice. If it made those changes it would deprive its CCF critics of every major indictment they have been able to make since their campaign began.

But unless and until it does make changes, the senators may as well resign themselves to an annual ordeal of ridicule. ★

Why They Hanged Ruth Ellis

I always enjoy Beverley Baxter's London Letter, but in the Sept. 17 number (The Hanging of Ruth Ellis) I wondered why his compassion was given to a woman who not only shot a man but continued to shoot when he was helpless . . . Few people agree with capital punishment. If a life sentence meant the murderer would be confined for life I think most people would oppose the death penalty. It is the thought that after years of confinement the prisoner is turned loose to vent his anger on innocent people that keeps the public from joining in a petition to have the law changed.—Dorothy Douthwaite, Edmonton.

● We are all against the death penalty, provided murderers feel the same way.—Gustave G. Lajoie, Coaticook, Que.

● Why should youth or beauty be a criterion whereby crime may be pardoned or condemned? The murder committed by Ruth Ellis was done openly in direct challenge to law.—M. MacDonald, Brulé, N.S.

● There is nothing in the world that requires murder to be the only out and those that think so are unstable characters with unstable minds. A great portion of society is trying to make the criminal a hero instead of giving him just rewards for his deeds. They want to pamper and even praise him until these persons have no fear of the law and no respect for society.

The ones who raise such a cry when a self-confessed murderer is hanged are the ones who will be first to shout for the "full treatment" should any criminal violence touch them.—J. E. Butler, Saskatoon.

Billy Graham's Campaign

Billy Graham's Campaign to Capture Toronto (Sept. 3) is outstanding reading. Several of my friends have had the pleasure of reading this article and were impressed and delighted to know of the splendid work undertaken in the Graham campaign. Your article helped stir up interest in the campaign from coast to coast.—F. W. Towler, Vancouver.

● There is NOT another reason than the one stated by Billy Graham for so many people attending his meetings—namely, the wish to find peace and security. Leslie Hannon's statement of the Graham campaign being compounded on the precepts of Carnegie and Barnum bespeaks ignorance and prejudice. Such misstatements are only made by worldly men who have no conception of what it is to be a real Christian, so cannot understand that it is an awareness of the world's desperate need of God and His salvation. Everyone may have this salvation when it is revealed in such a forthright and urgent way as Graham uses.—E. Campbell, Saskatoon.

● Your fascinating story has an ugly setting. Why the borderline ridicule and the language of the theatre and boxing arena when talking about a

spiritual movement?—W. Harry Colclough, Vancouver.

● I read the article with interest and congratulate you on it. I do not know how you got W. E. Sangster named as a Baptist minister. He is the ex-president of all the Methodist churches of Great Britain.—E. Crossley Hunter, Toronto.

● All your sarcastic remarks cannot mar the wonderful work of God which He has wrought throughout the world through His faithful servant Billy Graham. Judging by your article, you do not believe the Bible, or you could not use such terms as "Billy Graham machine" against a preacher of the Gospel.—Ellen Cullen, Port Arthur.

What's Wrong With Our Schools?

Having read your editorial, Why Should "Illiterates" Crowd the Colleges? (Sept. 17) I am at a loss to understand how illiterates obtain entrance to the colleges in the first place. The fact that the bursar needs the fees is beside the point.

Maybe I'm wrong, but it is a recognized fact that an illiterate is an uneducated person, so if our collegiates are turning out uneducated students and passing them on to colleges, then there must be something seriously wrong with our educational system.—William J. Parry, Belle River, Ont.

What to Call a Meal

I have just finished reading The Most Exotic Meal I Ever Ate, by John Gunther, in your Sept. 17 issue.

How on earth did you avoid entitling the article Inside Gunther? —Franz Jost, Edmonton.

You're right. It was hard.

How the Readers See It

It was an event to read The Magic Life, your first-prize story, by Anne Henry (Sept. 17). I can almost hear the "Hurry! Hurry! Hurry!" she pictured so vividly. Congratulations.—Lillian B. Thomas, Winnipeg.

● I would suggest that the author of The Magic Life read Take Me Home Again Irene in the same issue. Your prize award tells a story that, although about colorful people in a glamorous calling, is obvious and boring. Take Me Home Again Irene is a rather

implausible tale, but warm, interesting and convincing, although about commonplace people.—C. A. Laker, Toronto.

● Your Sept. 17 issue best yet. Articles on Scott Mission, Alcock and Brown, tuna tourney, Richard riot, safer driving rate tops.—Bert Richards, Toronto.

Pity the Song Writer!

So it is true. A song can be written and published in Canada by an unknown man who can't even read or write music (What One Song Can Do, Sept. 17). Smart and very lucky Warwick Webster! I compliment him for his ingenuity and brass, even though I am green-eyed with envy.

When I wrote my first song lyric I paid a man fifty dollars to set it to

a melody. That must have been a mistake, for the world is still waiting to hear me try for fame and fortune. Since that crushing disappointment in 1935 I have bought four musical instruments, and have taught myself to read and write flats and rests, sharps and clefs; and the only result: eviction after eviction from my bed-sitting studio.—C. P. Stokes, Ottawa.

When is a Driver Safe?

While Bill McKinley has many good points in his article, So You Think You Can Drive (Sept. 17), surely he is giving poor advice when he says a driver "pulled away from a downtown curb without making a signal." The important point is that the driver pulling away from a curb should not do so until there is a space in the traffic lane for him. So many drivers make the mistake of thinking that putting out their hand entitles them to proceed, which of course is not the case.—Edwin Percy, Willowdale, Ont.

More Trouble in Hockey?

Are you trying to stir up trouble just before the hockey season begins with the article, The Strange Forces Behind the Richard Hockey Riot (Sept. 17)? Certainly Richard got what was coming to him, but in view of all he has had to put up with it is not surprising that he blew his top. It is not so long since you had an article about another player (Tony Leswick) who spent most of his time teasing other players, especially Richard.—A. A. Wilson, Vancouver.

● I have read Maclean's for eight years and have found no more enjoyable reading anywhere . . . But on this Richard riot I cannot go along with the assumption that it was a "race riot in disguise." I appreciate, rather, John D. Griffiths' explanation that "latent hostility to authority sometimes overflows" . . . Although recognizing the fact that there is some friction to be overcome, I am confident we are not doing it by taking up the hue and cry of "race."—John W. Hope, Port Alice, B.C. ★

IN THE EDITORS' CONFIDENCE

Our Multi-Talented Writers

TWO OF our most erudite contributors are represented in this issue of Maclean's. One is Dr. Norman J. Berrill who explains how animals tell the time on pages 22 and 23; the other is James Bannerman who reports with pungency and wit on the Rev. Egerton Ryerson on pages 20 and 21.

Dr. Berrill is a mild-talking, but often tough-writing, zoologist on the faculty of McGill University and he has been a frequent contributor to Maclean's for several years. His last book won a Governor-General's Medal and we are pleased to note that his new book, *Man's Emerging Mind*, just published by Dodd, Mead, is receiving favorable critical attention.

Mr. Bannerman is the man who introduces Wednesday Night, and as a result of being exposed to the CBC's weekly cultural offering he is usually able to answer all the difficult questions on a program called *Now I Ask You*, especially those having to do with obscure Mozart quintets or plays by Racine.

We are often, however, confused when we listen to Mr. Bannerman on the air. Is it really Bannerman, we ask, or is it that fellow Rawhide again? Sometimes Rawhide sounds more like Bannerman than Bannerman does. Rawhide, of course, is Max Ferguson, the talented disk jockey from Halifax who can imitate anybody, but can imitate Mr. Bannerman even better than anybody. We publish his picture next to Mr. Bannerman's for easy identification.

RAWHIDE can imitate anybody, but... JAMES BANNERMAN is his star turn.

N. J. BERRILL knows his fish eggs too.

Incidentally Rawhide is one of the few men who have left Toronto to go and work in the Maritimes. We were talking about this with him the other day and he began to extol the charms of the Eastern Seaboard with such eloquence that we asked him if he'd care to write about it for Maclean's. He allowed as he would (the phrasing is Rawhide's, not Max Ferguson's) and we hope to be able to publish the results in an early issue. It will serve Rawhide just right if we change the by-line to James Bannerman. ★

MACLEAN'S

An old champion fights back

Artist Rex Woods got the idea for this month's cover from an item in a Toronto newspaper. It said that a householder was asking the courts to restrain an apartment builder from allowing building materials to be strewn on his lawn. Woods dropped around to Poplar Plains Road in an older residential section where new apartment buildings are sprouting almost overnight. And there, sure enough, were the two combatants. But what a difference in their ages!

Heart Attack Cripples Young Father

Gets \$150 a Month And Free Insurance!

In 1949, a young Montreal sales manager suffered a severe heart attack. He has been totally disabled ever since. He has a \$15,000 Confederation Life policy that carries a Total Disability Benefit. As a result, he receives a regular monthly cheque for \$150 while totally disabled, until he reaches age 65—his \$15,000 life insurance

policy continues in full force and Confederation pays the premiums! If he is still disabled at age 65 he will receive \$15,000 in cash or as income.

At any age, for any number of causes, you may suddenly find yourself totally disabled. That's why you would be wise to include a Total Disability Benefit in your life insurance, wherever possible. Ask your Confederation Man about it today! Or write for free booklet: "What About Disability?"

Of the hundreds of persons receiving Total Disability Monthly Income Benefits from Confederation Life, these are the most common causes:

Heart or Arterial Conditions	30%
Mental or Nervous Trouble	29%
Pulmonary Ailments	12%
Arthritis, Rheumatism	11%
Digestive Troubles	9%
Miscellaneous Ailments	9%

A MAN'S ale

"A job like mine takes it out of you"

with BODY in it

"But Labatt's IPA puts it right back in," says Henry C. Odell, salesman, Toronto

Something yearning in you for a man's ale... an ale with real body and flavour to it? Nothing satisfies a yearning like that better than IPA. Try it. A man-size thirst, a man-size taste in ales calls for Labatt's IPA. Henry Odell knows it. You should get to know it, too.

Find out about IPA... the ale that satisfies the man in you! Enjoy it at your favourite hotel or tavern, or at home. The man's ale—IPA!

THE SWING IS DEFINITELY TO
LABATT'S

Calgary—Lethbridge—Edmonton—Vancouver

AS THE unhappy crossfire of charges and counter-charges continued at Vancouver's police bribery probe one irate taxpayer took action himself to protect his premises from those without the law. He tacked on his door on Granville St. a crudely printed sign, "Wrong door—bootlegger next door."

...

A steno who works in Montreal's Windsor Station left for home the other evening and approached her familiar car stop to find a construction gang at work in the road. She watched them with interest for a few minutes, even thought to herself how nice it was to have something to take her mind off the tiresome wait for her trolley, before it suddenly dawned on her there wasn't going to be any streetcar along ever again. The workmen were tearing up the tracks to make way for a new bus route.

...

To cap their annual and highly successful duck shoot, twelve enthusiastic Parry Sound, Ont., hunters arranged to gather for a duck dinner at the home of one. Unfortunately one chap warned them he had to work late, but insisted that they go ahead with the meal and he'd catch up on arrival. Well, you know how a bunch of sports have to clown it up. There was much hearty slapping of knees as they hatched the plot, and then when the latecomer arrived there was nothing but poker faces as the rest of them went ahead with dessert while the newcomer received a dinner plate laden with potatoes, cranberry sauce, dressing and one

small roasted duck heart. The latecomer didn't protest this treatment at all, simply pulled a package from his pocket, unwound some wax paper and slipped a piping-hot roast duck onto his plate which he proceeded to eat with gusto.

...

Following a minor accident a Winnipeg driver dropped into the police station to tell his side of the story. He was given a form to fill out which asked him to state his version of the accident. Whereupon he wrote "At the time of the accident my version was good."

Parade pays \$5 to \$10 for true, humorous anecdotes reflecting the current Canadian scene. No contributions can be returned. Address Parade, c/o Maclean's Magazine, 481 University Ave., Toronto.

Only a real old-fashioned winter, bringing enough snow and bitter cold to drive all Mother Nature's creatures into hibernation, will bring peaceful week ends at home to two tender-hearted women who live in Toronto's Forest Hill Village. All summer and all fall they were plagued by a colony of grey squirrels that took up residence in the trees at the foot of their garden. Victory seemed theirs when they found a large trap with a little door that snaps shut

without hurting the squirrel, but a sympathetic friend asked, "What do you do with the squirrels you catch after you've got them in the cage?"

"Oh, we drive up to Orillia every week end and let the little scamps out."

...

About twenty minutes after their take-off from Toronto's Malton Airport, a father turned to his excited five-year-old daughter and asked her how she liked her first flight. "Fine," she said, "but daddy—when do we start getting smaller?"

...

A farmer near Prince Albert, Sask., is convinced inflation is done for and we're back to a hard currency since he reported a slow leak to his garage-man and had the soft tire taken off his truck. From between tube and tire the repairman plucked three bills—a five and two ones—folded over twice into a compact rectangle.

...

While Mr. Howe was being accused of letting the Yanks steal Avro's flying saucer project because Ottawa wouldn't back it, the Vancouver Sun reported a new secret weapon being tried out at army manoeuvres in Camp Gagetown, N.B. "The exercise is being staged to train elephants of the division in operational roles," declared the Sun, chucking security rules to the winds, but it stopped short of reporting those rumors that a new young general named Hannibal had lately gained the ear of the high brass.

A beauty with a fascinating past

The true story of her watch—how it became the beauty it is—reads like a romantic novel set in Switzerland.

Names like Daniel Jeanrichard and Nicolas Fatio stand out as stars. Hundreds of years ago, these Swiss artisans invented the jewels and the tools that forecast a new conception of watch beauty, precision and dependability.

During the decades that followed, the watchmakers of Switzerland improved and refined and perfected each other's handiwork. And

from the inner perfection of the jeweled-lever movements to the artistry of the outer designs, fine Swiss watches have no counterpart.

Choose a ladies' watch as a bracelet, as a precious gem clip. For men, choose any of the many handsome originations that are the talk of the watch world.

Visit your jeweler—to make an anniversary memorable, a birthday exciting, *any* occasion exceptional. *For the gifts you'll give with pride, let your jeweler be your guide.*

See "The Watch Fashion Parade," October 27 to November 5, at your jeweler's. You'll see a bit of Switzerland, too, in the new wonders the Swiss watchmakers have created especially for you.

TIME IS THE ART OF THE WATCHMAKERS OF SWITZERLAND

ADDS YEARS
TO CARPET LIFE

MAKES CARPET
FEEL
MORE LUXURIOUS

NEVER PACKS
OR MATS

THERE'S BEEN A REVOLUTION IN RUBBER

*Now...with Polysar...
you too can have a magic carpet!*

You can make another wonderful dream come true with a new kind of rubber under-cushion. Now all your carpets, new and old, can feel amazingly rich and deeply-piled—a magic change made possible by Polysar.

This newest kind of under-cushion is made of Polysar S-50, blown into sponge rubber with millions of tiny air cells, and moulded into a deep pattern that gives you even greater resilience. With such spring-like support your carpets feel luxuriously soft and deep—last years longer, too.

Moulded rubber under-cushion emphasizes once again the versatility of Polysar. Because Polysar is a chemical rubber, formulated to each specific need, manufacturers are able to turn out many new products and improve old ones. Such new products as latex-base paints, nuclear shoe soling and coloured automotive window sealing—such improved ones as tires, battery boxes, conveyor belts and floor tiling are convincing proof . . . there's been a revolution in rubber.

Polymer Corporation Limited • Sarnia, Canada

ALMOST HALF OF ALL NEW RUBBER USED IN CANADA TODAY IS POLYSAR
